### Dedicated Word Processor: Pros and Cons

# "WORDSWORTH,<sup>T.M.</sup> TAKE A LETTER!"

**THE FIRST SUPER-SIMPLE LETTER QUALITY WORD PROCESSOR IN  
THE WORLD THAT CAN SIT NEXT TO YOUR SECRETARY—  
FOR LESS THAN \$5,000.**

"Wordsworth<sup>TM</sup>" removes the fear and loathing many people have about things called "computers" and "word processing." Because Wordsworth just sits at a desk and does what he's told. With unique new, simplified software, it can tell its typist what to do—step by simple step—to perform even the most complicated tasks.

It can not only "take a letter," but it can revise it, customize it in millions of ways (quite literally), personalize it, print it on your letterhead or business form so you can't tell it from hand-typed . . . in short, everything but put it in an envelope.

Moreover, it can perform all sorts of mundane business functions,

like general ledgers and accounting reports, using easily available industry-compatible CP/M<sup>TM</sup> software.

Installation? Plug it in. (Cable supplied.)

Size? Bigger than a breadbox—but not by much. It's about half as big, or less, than systems that can't do half as much. Definitely desktop—a sub-compact 20" by 40".

Service? Available everywhere.

Price? About \$4,995. Complete and ready to go.

For the name of your nearest dealer—and a free hands-on demonstration—just pick up the nearest telephone.

**TOLL-FREE 1-800-343-6833.**

In Massachusetts, call collect (617) 828-8150. Telex 951-624.

## LEADING EDGE<sup>TM</sup>

Leading Edge Products, Inc., 225 Turnpike Street, Canton, Massachusetts 02021  
DEALERS: For immediate delivery from the Leading Edge Inventory Bank,<sup>TM</sup> on "Wordsworth" and other of the industry's most popular products, just give us a call.

## CROMIX\* — Cromemco's outstanding UNIX<sup>†</sup>—like operating system

CROMIX is just the kind of major development you've come to expect from Cromemco. After all, we're already well-known for the most respected software in the microcomputer field.

And now we've come up with the industry's first UNIX-lookalike for microcomputers. It's a tried and proven operating system. It's available on both 5" and 8" diskettes for Cromemco systems with 128K or more of memory.

Here are just some of the features you get in this powerful Cromemco system:

- Multi-user and multi-tasking capability
- Hierarchical directories
- Completely compatible file, device, and interprocess I/O
- Extensive subsystem support

### FILE SYSTEM

One of the important features of our CROMIX is its file system comprised of hierarchical directories. It's a tree structure of three types of files: data files,

directories, and device files. File, device, and interprocess I/O are compatible among these file types (input and output may be redirected interchangeably from and to any source or destination).

The tree structure allows different directories to be maintained for different users or functions with no chance of conflict.

### PROTECTED FILES

Because of the hierarchical structure of the file system, CROMIX maintains separate ownership of every file and directory. All files can thus be protected from access by other users of the system. In fact, each file is protected by **four separate access privileges** in each of the three user categories.

### TREMENDOUS ADDRESS SPACE, FAST ACCESS

The flexible file system and generalized disk structure of CROMIX give a disk address space in excess of one gigabyte per volume — file size is limited only by available disk capacity.

Speed of access to disk files has also been optimized. Average access speeds far surpass any yet implemented on microcomputers.

### 'C' COMPILER AVAILABLE, TOO

Cromemco offers a wide range of languages that operate under CROMIX. These include a high-level command process language and extensive subsystem support such as COBOL, FORTRAN IV, RATFOR, LISP, and 32K and 16K BASICs.

There is even our highly-acclaimed 'C' compiler which allows a programmer fingertip access to CROMIX system calls.

### THE STANDARD O-S FOR THE FUTURE

The power and breadth of its features make CROMIX the standard for the next generation of microcomputer operating systems.

And yet it is available for a surprisingly low \$595.

The thing to do is to get all this capability working for you now. Get in touch with your Cromemco rep today.

\*CROMIX is a trademark of Cromemco, Inc.

## RETURNS ARE IN; CPAids VOTED MVP

### Title of "Most Valuable Program" Bestowed on Master Tax Package

Barely four years after its introduction into the micro-computer market, CPAids Master Tax software is being praised by hundreds of accountants as their Most Valuable Program.

Accountants nationwide have prepared thousands of returns using CPAids Federal 1040 software and today CPAids announced their enhanced programs for 1981.

The most notable addition to all CPAids software, the Fixed-Asset Accounting Program collects data year round and carries information over to the appropriate schedules and forms at tax time. Continuing an era of efficiency and cooperation, General Ledger II interfaces with the Master Tax Program to generate Schedule C. The Master Tax Program also generates a proforma tax organizer, providing necessary information from the previous years' returns.

#### The Time Is Right For CPAids

In an informal interview, CPAids dedicated its products to eliminating the frenzied feeling plaguing accountants during tax season and vowed to serve professionals well, not just at tax time, but all year.

Authorized dealers have pledged their continued support and offer a *free* 1981 update to those who subscribe now.

#### MASTER TAX

- Federal 1040 pages 1 and 2
- Schedules A, B, C, D, E, F, G, R, RP, SE, TC, ES
- Forms 1116, 2106, 2119, 2210, 3468, 3903, 4136, 4255, 4625, 4726, 4797, 4874, 4972, 5695, 5884, 6251, 6252
- Client instruction letter
- Exclusive CPAids print options:
  - preprinted forms
  - overlays
  - generated computer forms
  - printing on government forms
- Loan amortization program
- Input sheets

Also available this year, our new 1120 corporate program.

#### GENERAL LEDGER II

- General ledger, payroll fixed-asset accounting
- Loan amortization
- Stores all transactions
- Payroll interactive with the general ledger section
- Statement of changes in financial position
- Compilation letter
- Fixed-asset program stores up to 10,000 assets

*CPAids 1040 tax software basks in early victory amidst cheering throng of enthusiastic users!*

For only \$55 CPAids will send you a demonstration disk and manual.

Call or write for free brochure and the name of the dealer nearest you.

# If you want a choice in print wheels, here's the first choice in printers.

The Diablo 630.

It's the first printer that lets you use either metal or plastic print wheels. So you can choose the print wheel that's just right for the job.

The 630 works as well with a 96-character plastic daisy print wheel as it does with an 88-, 92-, or 96-character metal daisy print wheel. In over 100 different type styles.

Every 630 has fewer moving parts than competitive printers, which makes it more reliable. And it offers unsurpassed print quality. Compatibility with Diablo supplies. And bi-directional printing capability.

So if you want to change your print wheels, you'll just have to change your printer.

To a Diablo 630 printer.

# EDITOR'S NOTEBOOK

## Catching up with busses

What are *busses*, and why are they important to computer buyers? We hear about the S-100 bus, SS-50 bus, Multi-bus...even the "software bus." What's this all about?

The computer term bus (sometimes spelled "buss" in an attempt to distinguish it from the four-wheeled omnibus) is borrowed from the electrical industry. In that context, a *bus bar* is a solid bar of

metal that transports electrical current from where it is generated to where it is needed.

Similar in concept, a computer bus is a means to distribute electrical signals from place to place within a computer. Electrical current for power is sent about in this manner, as well as the delicate data and timing signals that rattle back and forth at rates counted in the millions per second.

The physical implementation of a bus

usually begins with a *mother board*, an etched circuit board consisting of little more than a set of multi-pin connectors —themselves interconnected by conducting traces of copper on the mother board itself.

The connectors on the mother board are designed to accept the edges of other circuit boards termed *daughter boards*. It is these boards that contain a computer's central processing unit (CPU), memory, input/output (I/O) and other necessary circuitry. The functions are usually physically separated, with the CPU being on one board, the I/O circuitry on another, and one or several memory boards completing the population. When plugged into a mother board, these disparate parts spring to life to become the kernel of a modern micro-computer system.

Altair, regarded as the grandfather of microcomputer manufacturers, designed something called the S-100 bus to perform just these functions. Although designed simply as a manufacturing convenience by and for Altair, the S-100 bus design was quickly adopted by other budding manufacturers for their own use.

Many of today's familiar names began as tiny garage operations whose sole purpose was to make add-on memory boards for Altair and other S-100 computers. Such were the beginnings of Imsai, Processor Technology and Vector Graphic; as well as Godbout, Industrial Micro Systems, Systems Group and TEI in more recent times. The result is that the owner of an S-100 bus computer currently has a wide choice of boards that can be purchased from a growing list of vendors to enhance his system. The recent standardization of the S-100 bus by the Institute of Electrical and Electronics Engineers (IEEE) has validated the concept of interchangeable S-100 boards, much to the benefit of all concerned. (However, not all S-100 products being sold are built in conformance to the IEEE standard.)

This interchangeability has been very healthy for the growth and acceptance of microcomputers. It was directly responsible for the existence of many of the computer manufacturers listed above, and others as well. It also serves to calm a buyer's fears that he might be purchasing a one-of-a-kind special from an unknown computer maker. Many operators of Imsai computers (now defunct as a manufacturer) are perking along happily with parts, carrying a half-dozen different manufacturers' boards nestled comfortably in their S-100 busses.

Interchangeability is the concept that generated the remarkable fabrication

## SUPER-TEXT™

Super-Text is the word processing answer. A rare combination of ease of use and advanced features. Super-Text turns an Apple computer into a powerful word processing system with capabilities unmatched by many dedicated WP systems costing thousands of dollars more.

Add the Form Letter Module and Address Book to make Super-Text the most powerful business correspondence system. Use Super-Text to create a letter, then print a personalized copy for everyone on your mailing list. Super-Text is \$150, the Form Letter Module \$100 and the Address Book \$50 at computer stores everywhere.

# COMPUSTAR<sup>TM</sup>

## INTERTEC'S INCREDIBLE 255 USER SMALL BUSINESS COMPUTER

At last, there's a multi-user micro-computer system designed and built the way it should be. The CompuStar<sup>TM</sup>. Our new, low-cost "shared-disk" multi-user system with mainframe performance.

Unlike any other system, our new CompuStar offers what we believe to be the most practical approach to almost any multi-user application. Data entry. Distributed processing. Small business. Scientific. Whatever! And never before has such powerful performance been available at such modest cost. Here's how we did it...

The system architecture of the CompuStar is based on four types of video display terminals, each of which can be connected into an auxiliary hard disk storage system. Up to 255 terminals can be connected into a single network! Each terminal (called a Video Processing Unit) contains its own microprocessor and 64K of dynamic RAM. The result? Lightning fast program execution! Even when all users are on-line performing different tasks! A special "multiplexor" in the CompuStar Disk Storage System ties all external users together to "share" the system's disk resources. So, no single user ever need wait on another. An exciting concept... with some awesome application possibilities!

CompuStar<sup>TM</sup> user stations can be configured in almost as many ways as you can imagine. The wide variety of terminals offered gives you the flexibility and versatility you've always wanted (but never had) in a multi-user system. The CompuStar Model 10 is a program-mable, intelligent terminal with 64K of RAM. It's a real workhorse if your requirement is a data entry

or inquiry/response application. And if your terminal needs are more sophisticated, select either the CompuStar Model 20, 30 or 40. Each can be used as either a stand-alone workstation or tied into a multi-user network. The Model 20 incorporates all of the features of the Model 10 with the addition of two, double-density mini-floppies built right in. And it boasts over 350,000 bytes of local, off-line user storage. The Model 30 also features a dual drive system but offers over 700,000 bytes of disk storage. And, the Model 40 boasts nearly 1½ million bytes of dual disk storage. But no matter which model you select, you'll enjoy unparalleled versatility in configuring your multi-user network.

Add as many terminals as you like - at prices starting at less than \$2500. Now that's truly incredible!

No matter what your application, the CompuStar can handle it! Three disk storage options are available. A tabletop 10 megabyte 8" winchester-type drive complete with power supply and our special controller and multiplexor costs just \$4995. Or, if your disk storage needs are more demanding, select either a 32 or 96 megabyte Control Data CMD drive with a 16 megabyte removable, top loading cartridge. Plus, there's no fuss in getting a CompuStar system up and running. Just plug in a Video Processing Unit and you're ready to go... with up to 254 more terminals in the network by simply connecting them together in a "daisy-chain" fashion. CompuStar's special parallel interface allows for system cable lengths of up to one mile... with data transfer rates of 1.6 million BPS!

Software costs are low, too.

CompuStar's disk operating system is the industry standard CP/M\*. With an impressive array of application software already available and several communication packages offered, the CompuStar can tackle even your most difficult programming tasks.

Compare for yourself. Of all the microcomputer-based multi-user systems available today, we know of only one which offers exactly what you need and should expect. Exceptional value and upward growth capability. The CompuStar<sup>TM</sup>. A true price and performance leader!

## Baked Apple.

Last Thanksgiving, a designer from Lynn/Ohio Corporation took one of the company's Apple Personal Computers home for the holidays.

While he was out eating turkey, it got baked.

His cat, perhaps miffed at being left alone, knocked over a lamp which started

a fire which, among other unpleasantries, melted his TV set all over his computer. He thought his goose was cooked.

But when he took the Apple to Cincinnati Computer Store, *mirabile dictu*, it still worked.

A new case and keyboard made it as good as new.

Nearly 1,000 Apple dealers have complete service centers that can quickly fix just about anything that might go wrong, no matter how bizarre.

So if you're looking for a personal computer that solves problems instead of creating them, look to your authorized Apple dealer.

You'll find everything well-done.

The personal computer.

For the authorized dealer nearest you, call (800) 538-9696. In California, call (800) 662-9238. Or write: Apple Computer Inc., 10260 Bandley Dr., Cupertino, CA 95014.

# AFTER YEARS OF MAKING A NAME FOR OTHERS, WE DECIDED TO MAKE ONE FOR OURSELVES. ACCUTRACK.

We've been building high-performance magnetic media for system manufacturers for years. Precision media that consistently tests out at higher standards.

Accutrack performance is due in part to exceptional manufacturing tolerances made possible by state-of-the-art equipment. In part to our experience as the company that invented and perfected media certifying. And in part to the R&D

resources that only a Fortune 500 company like Dennison can provide.

Accutrack disks. Precision built and critically certified to make sure they work. OEMs stake their reputations on them. You can trust them for your data. Models are available for virtually every data and word processing system. Call toll-free (800-225-8715) for the name of your nearest dealer.

**Dealers:** Give your customers a choice: Accutrack's OEM performance as well as your heavily advertised brand. For great terms, support and fast delivery, call today. Find out how responsive a media supplier can be.

that the CP/M operating system is a "software bus." Technically speaking, the idea is absurd. At a more abstract level, it is certainly true that Digital Research's CP/M will run on a variety of different computers. And—equally as important—some dozens of languages and thousands of applications programs will run on CP/M and whichever physical computer it happens to reside at the moment. Whether by clever design or simple luck, the CP/M operating system has changed the face of computing as we know it—and interchangeability is the key reason for the phenomenon.

Certain microcomputer manufacturers, for their own selfish reasons, have been trying to bury the "bus" idea for some time now. These vendors want *all* your business, and attempt to enforce their wishes via deliberate technical incompatibility between their products and those of other manufacturers. "Single board computers" come from this idea.

We are delighted to report that efforts by the anti-bus manufacturers have resulted in a few spectacular failures. Most notable is the Apple II. This computer was deliberately designed to *not* be S-100 compatible. The Apple II does, however, come with a set of internal connectors that fit the technical description of a bus. It didn't take long for the garage shops to uncover the specifications for the Apple bus, and begin to churn out compatible products for this populous processor. Memory extensions, speech boards, extended graphics boards, 80-column terminal boards, graphics table boards...even an extension CPU board that will run normally Apple-incompatible CP/M. The result? Increased customer acceptance of the computers, and increased sales for Apple. Success lies in making it easy for customers to acquire plug-in boards from other vendors.

## Various designs abound

Microcomputers are blessed with a wide range of bus designs. The S-100 bus is somewhat married to the 8080 (and similar 8085 and Z80) microprocessor integrated circuit chips. With the notable exception of Alpha Microsystem's 16-bit unit, the S-100 bus is quite incompatible with other designs of microprocessor chips. The 6800 and 6809 micros are most often found in an SS-50 bus. The Apple bus mentioned was engineered around the 6502 device.

More recent designs, such as Intel's Multibus, are happiest with 16-bit processors. Others, like the STD bus, are most often seen in industrial applications. We know of one remarkable

effort, fostered by the equally remarkable Guruprem Singh Khalsa, which purports to be processor-independent and incorporates the S-100 design as a subset. The PI-bus has not, unfortunately, been as well accepted as its clever design deserves.

We feel that the idea of bus-oriented computers is good for the computer buyer. In a larger sense, we feel it is good for our industry as well. While you are out computer shopping, include

these in your list of questions: "Does this system have a bus? Will boards from other manufacturers work in it?" If either answer is "no," ask the sales person why this is so. It may well be that the explanation is a convincing one, so that the system (or the dealer) offers overriding advantages that make the "bus" question a moot one. In any event, you have learned more about your potential purchase. And that's good, any way you achieve it. —TF

## Benchmark addendum

Following is an addendum to the article "Report Card: Benchmark" (IA Aug 81), in which execution speeds were compared for a wide variety of machines. A speed benchmark should only be considered in conjunction with other criteria. One such criterion is the type and accuracy of the arithmetic computations performed by the machine.

It must be noted that two types of internal arithmetic are used by the various Basics: binary and BCD (binary coded decimal) floating point. In each of these cases, the length (in bytes) of the internal representation of a floating point number determines the speed and precision of arithmetic computations. For comparable precision, binary floating point computations prove somewhat faster than BCD; however, decimal oriented computations, such as dollars and cents, are not accurately represented by binary floating point variables.

Over the spectrum of Basics to which I have access, the speed hierarchy is an inversion of the accuracy hierarchy—the highest rated in speed (Microsoft) offers the lowest rating in computational accuracy. Microsoft offers an extended precision variable type, which doubles the computational accuracy at a corresponding execution speed penalty. Not every computation requires exacting accuracy. Frequently, scientific operations are adequately served by some six digits accuracy. Business computations, however, must frequently be accurate to the cent.

Consider, as a representative computation that illustrates the speed/precision dilemma facing your readers, a problem of compound interest: what is the value of principal P compounded at interest I over a period of N intervals? The value is given as:  $V = P * (1 + .01 * I)^N$ .

Regardless of the machine, parameters P, I, N can be selected to exceed the available precision. It is necessary to select values that might be considered "typical" for microcomputer-based applications. Suppose we inquire as to the future value of \$10,000 invested at 12% annual interest, compounded monthly, after one year. This value is given as:  $V = 1000 * (1.01)^{12}$ . We wish the result to be accurate to the cent.

The compound interest problem was adopted prior to testing the various Basics (truly) and the results proved quite surprising: Microsoft Basic, compiled or not, was unable to perform directly the requisite computation, even in extended precision, owing to the internal computational algorithm.

The Basic program used for testing was `PRINT 1000 * (1.01)^12`, with answer 11,268.25. In Microsoft 4.51 extended precision, the program was

`PRINT 1000D0 * (1.01D0)^12D0`

which yielded 11,268.23, off by 2 cents. (Version 5.20 yielded 11,268.24, off by one cent.) These results are quite surprising, since the Basic lost 10 digits of precision in the computation. The ordinary precision computation was off by a nickel—\$11,268.20. The error in extended precision computation revealed a choice in computational algorithm with which an entity of the form

$X^Y$

can be computed. Typically, this quantity is computed as the antilog of  $Y * \log(X)$ , i.e., as

$10^{(Y * \log_{10}(X))}$

However, when Y is an integer, an alternative computation of repeated multiplication is frequently faster and more accurate. Microsoft Basic does not utilize the repeated multiplication option. To achieve the requisite accuracy, the following Microsoft program was required:

```
10 DEFDBL V
20 V = 1000D0
30 FOR J = 1 TO 12: V = 1.01D0 * V: NEXT J
40 PRINT V
```

When contrasted with other Basics tested, this program proved by far the slowest.

Before moving on, the published results of speed comparisons between Microsoft Basic interpreted and compiled indicate a speed increase upon compilation by a factor of 3.6, substantially less than the value suggested by an earlier review of the product.

The findings regarding other Basics tested are also interesting.

Micropolis Basic ver. 3.0 uses an internal BCD representation of numbers with 8-digit precision. This version computed the compound interest problem with

High resolution, dot addressable graphics with vertical resolution of 72 dots per inch and up to 82 dots per inch horizontal resolution.

Single sheet feeder is very simple to use. The only front load feeder available on the market today.\*

"Q.T." cover reduces noise to an office comfort level. This is an optional feature to our standard sound deadening case.

1K standard buffer permits the 88G to print while receiving data. The optional 2K buffer allows a 1920 character dump to the printer freeing the CRT.

# The Features Leader

## Integrated Paper Handling System

Dual tractor/friction feed allows use of pin feed, roll or single sheet paper.

## Versatile Interface

Data input from most computers can be supported by the 88G. RS232C serial and Centronics® type parallel is standard. Options can be added for current loop, IEEE 488 and high speed serial inputs.

## Letter Quality Capability

The 88G provides a selectable 11 x 7 serif style dot matrix for correspondence printing.

## Cost Effective

The 88G has more features than any other impact printer in its price class. First compare the quality of the 88G, then compare the price—the 88G wins! Single unit price is less than \$800.

\*Optional

requisite accuracy; however, the exact result revealed the computation did not take advantage of the fact that an integer power operation was required. Apparently Micropolis Basic uses the log/antilog approximation, which was found to err by one cent after compounding the interest over 19 intervals.

CBasic ver. 1.01 utilizes a BCD internal floating point representation with a precision of 14 digits. Additionally, CBasic recognizes the advantage offered by an integer power operation and utilizes repeated multiplications when possible. The 14-digit precision offers higher accuracy than one is ever likely to need and reveals to some extent the reason behind the modest ranking on the speed spectrum. The extent of compilation of CBasic is widely misunderstood: CBasic is not a true compiler. Upon execution, the CBasic program is interpreted by the CRUN interpreter. By separating the syntactical analyzer from the run-time package, the latter need not concern itself with syntax checking. The penalty paid here is that program development/modification is a multiple-step process. There are two sides to every coin.

North Star Basic ver. 5.2 utilizes an internal BCD representation of floating point numbers, and is unique in that a range of precisions is offered from four to fourteen digits, with a different version of the Basic required for each precision. Communication of data between the different versions of Basic is difficult. The standard version offers 8-digit accuracy with special consideration given to integer power operation, and had no difficulty handling the compound interest problem. As indicated in the article, floating point hardware is available, which offered a speed improvement by a factor of 1.7 in the prime number program. Not mentioned in the article is the availability of the COMSTAR compiler for North Star Basic. Taking advantage of compilation by COMSTAR as well as the floating point hardware yielded a run time of 161 seconds for the prime number program.

Finally, it should be noted that the differences between the various Basics in string and disk operations are often of greater significance than either speed or accuracy.

Allen Ashley  
Pasadena, CA

### More benchmarking

Re: "Report Card: Benchmark" (IA Aug 81), I decided to try the test on my system. The following data was achieved on an Altos micro system, model ACS-8000-7, with a Z80A 8-bit processor with a speed of 4.0 MHz. The operating system is CP/M, and the language is Microsoft 5.2. The program was unmodified for the two runs. The first run was 667 seconds under MBasic, and the second run was 211 seconds compiled.

David E. Wareham  
Hoffman Estates, IL

Altos model ASC-8000-2 under Z80A, at 4.0 MHz, under CP/M 1.4 in Microsoft 5.2C came in at 230 seconds. The same model and specifications, substituting only Microsoft 5.2 I, come in at 677 seconds. The Altos coming in number 2 to the TEI 8085 5 MHz is quite an omission from the table. This is the best of the Z80 performers. And it is the "industry standard" CP/M-MBasic combination.

Martin L. Proudfoot, M.D.  
Edmonds, WA

On the Heath H8 micro, type Z80, at 2.048 MHz, under the HDOS operating system in Microsoft Basic, the run time was 1,774 seconds.

Arthur L. Thomas  
Lawrence, KS

On the Atari 400, with a 6502 processor, at 1.8 MHz, under the Atari operating system in Atari Basic, type I, the time was 1,625 seconds. On the Atari 800, with the same specifications except using the CP/A operating system and Basic A+, the time was 1,523 seconds. By adding the line:

125 GRAPHICS 3,

the Atari will be relieved of a lot of DMA. Execution speed with graphics command and Atari Basic is 1,187 seconds.

Wynn Smith  
Oregon City, OR

The Chieftan 9821 micro, type 6809, 8-bit model, at 2.0 MHz, under the Microware OS9 in Microware Basic 09-type C, came in at 213 seconds.

Lewis Hibbets  
Specialty Electronics  
Enid, OK

# WHAT'S THE KEY TO BUYING A COMPUTER?

Look beyond the computer. Look at how the total system—hardware, software, support, service—meets your needs, today and tomorrow. That's the key. When you choose a computer source, you choose a long term partner who must stand by you with total support. And no one stands by you like Heath/Zenith.

## Software

Including word processing, business applications, versatile utility programs, and the Heath Users' Group library of over 500 low-cost programs for home, work or play.

And a choice of three operating systems, including CP/M by Digital Research for compatibility with thousands of popular CP/M programs.

## Languages

For your own custom programs, Microsoft languages are available in BASIC (compiler and interpreter), FORTRAN and COBOL.

## Self-Study Courses

Learn at your own pace with *Programming Courses* that teach you to write and run your own programs in Assembly, BASIC, Pascal or COBOL.

For the business person, *Computer Concepts for Small Business* helps you evaluate the ways a computer can benefit your business. And for the novice, *Personal Computing* is a complete introduction to computer fundamentals and BASIC Programming.

## Support

Before and after the sale we work with you to configure the system that serves you best. We help you get your system up and running smoothly. Assistance is always just a phone call away.

## Service

Friendly, experienced technicians are available, either over the phone or at any of the 56 Heathkit Electronic Centers nationwide.

## Visit your Heathkit Electronic Center\*

Pick the store nearest you from the list at left. And stop in today for a demonstration of how Heath/Zenith Computer Systems can serve you. If you can't get to a store, send \$1.00 for the latest Heathkit Catalog and the new Zenith Data Systems Catalog of assembled commercial computers. Write to Heath Co., Dept. 343-834, Benton Harbor, MI 49022.

Pick a strong partner.  
**Heath/Zenith & You.**

INTERFACE AGE 15

# 68000 $\mu$ P on the S-100 Bus?

## YES, AVAILABLE NOW FROM DUAL SYSTEMS!

- ☐ 8 MHz 68000 microprocessor.
- ☐ 16-megabyte direct addressing.
- ☐ 32-bit internal arithmetic.
- ☐ Minicomputer type instructions including MULTIPLY.
- ☐ FULL IEEE-696 S-100 compliance. Runs with all 4 MHz S-100 boards and automatically runs faster when accessing Dual Systems memory boards, for FULL SPEED OPERATION OF THE 68000.
- ☐ Powerful vectored interrupts. 7 Vectored interrupts, including NMI, as well as alternate mode having up to 256 interrupts.
- ☐ On board monitor ROM for immediate use.
- ☐ Connector for future addition of memory management unit for multi-user operating systems.
- ☐ Built to the highest industrial standards with 200 hour burn-in.

CPU/68000 CPU board. . . . \$1195  
32K-byte 8/16-bit NONVOLATILE RAM board, for secure storage of programs you are developing. Allows FULL SPEED CPU operation. CMEM-32K, per 32K-bytes . . \$895  
32K-byte 8/16-bit EPROM board, EPROM-32K . . . . . \$395  
Serial I/O board, SIO-2 . . . . \$285  
All of the above with cabinet, power supply and backplane. . . . \$3685

OEM and Dealer pricing is available.

Sales representatives in most metropolitan areas.

## LETTERS

ever, has one tremendous flaw.

Despite the implication that Personal Software was the creative force behind the entire line of "Visi" products, they in fact act solely as publisher and distributor of their software. Micro Finance Systems, Inc. was responsible for the design and implementation of both Visi-Plot and VisiTrend, and maintains the program copyright to both products. A similar relationship exists between Software Arts, Inc. and VisiCalc.

It is certainly true that Personal Software has done an exemplary job of promoting and marketing the "Visi" line; this has contributed greatly to the continuing success and growth of these products. It would certainly be a gross misrepresentation and injustice, however, not to mention the creators of these software packages.

Mitchell Kapor  
Micro Finance Systems  
Cambridge, MA

The article states that "The capacity of VisiCalc for a 48K Apple remains at 254 rows and 63 columns maximum." The "capacity" has never been that large (it was never possible to make an entry in the bottom right-hand corner of the sheet, even with a 64K machine). In addition, the new version of the program absconds with an additional 40% of the available memory in a 48K machine, leaving only 17K available to the user vs. 25K in the original version.

Robert E. Ramsdell  
Rockport, MA

### In search of solutions

As the president of a hospital consulting firm in Kansas City, I have recently converted much of our data processing activities from time sharing systems to an Apple microcomputer. Our biggest problem has been with software packages that do not live up to their billing. It would seem that a magazine such as yours, or some other organization, could provide a valuable service by organizing a system with the major manufacturers (and advertisers) of software to provide user feedback to an unbiased source. A card included in the software packages for user evaluation, which could be sent directly to your magazine to act as a clearinghouse for applications and problems, would allow a prospective user to check out the type of applications and relative success before shelling out his time and money on a lemon. If a manufacturer failed to participate in this type of program, I would anticipate that many people would hesitate to purchase his software. While there would probably

be more people responding that are unhappy, I do believe that well designed packages such as VisiCalc, would get the positive responses they deserve.

The second problem is the incredibly inconsistent information about systems compatibility between manufacturers. I do not have any bright ideas about how to solve this problem. It would appear that the burden of responsibility will have to fall upon the manufacturers and catalog dealers to work together on these types of problems. My supposition is that the microcomputer industry will be left open to major manufacturers of hardware and software such as IBM, due to their single source responsibility, unless these types of problems can be resolved.

Frank Zilm  
Kansas City, MO

### Reader interface

As a medical doctor and owner of a TRS-80 model III 32K diskette microcomputer, I am interested in filing the records of my patients. I would appreciate advice on available software.

### For the record

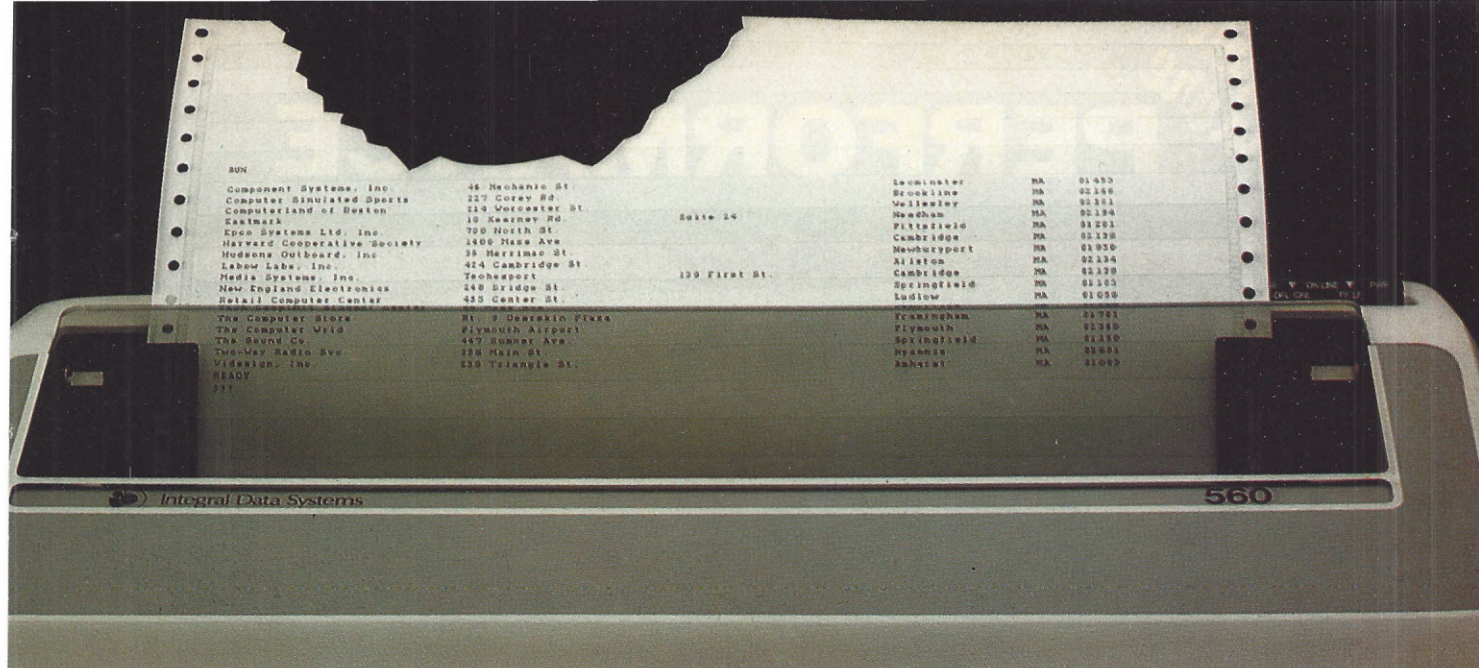

Re: "Software Review: CBasic Revisited" by Alan R. Miller (IA Sep 81), the program line on page 111:

c = fn.arctan(a/b)

should read:

c = fn.arctan(a,b)

# Meet the Tiger with a bigger bite.

Introducing the remarkable 132-column Paper Tiger™ 560. The first full-width matrix printer to give you fully formed characters for a low \$1394.\*

The new 560 features a staggered nine-wire ballistic type print head that overlaps dots in both horizontal and vertical planes. It bi-directionally prints up to 150 dense, text quality characters per second.

The 560 also features a reliable cartridge ribbon that lasts up to four times as long

presents a breakthrough in matrix printing, offering the user excellent print quality with the look of a matrix printer. Employing a unique "red column" head manufactured by Integral Data Systems, the 560 creates high quality printouts by overlapping dots in both horizontal and vertical planes.

Paper Tiger 560 Print Sample

as spool and cassette ribbons, separate heavy-duty stepper motors to drive the print head and advance the paper, plus true tractor feed.

And famous Paper Tiger performance comes with every new 560. Like fixed or proportionately spaced text, programmable tabbing and business forms control, automatic text justification, print formats to 220

columns, parallel and serial interfaces, self-diagnostics, and more. All inside the most compact printer of its kind.

Need more stripes? Dotplot™, our high-resolution raster graphics package, is standard on every 560.

For data processing, word processing and small business applications, this is your Tiger. The business-sized Paper Tiger™ 560.

It's a Tiger you can count on.

Call TOLL FREE 800-258-1386 (In New Hampshire, Alaska and Hawaii, call 603-673-9100.) Or write: Integral Data Systems, Inc., Milford, NH 03055.

# PERFORMANCE

TELETEK's memory board rounds out our family of high-technology IEEE S-100 boards by offering the highest performance to cost ratio in the industry. They're powerful, usable, and they fit-together and in your system.

\*TELETEK's new 64K bank-select dynamic memory board is field-expandable to 256K! Capable of operation at 4MHz and (optionally) at 6MHz, it is already getting rave reviews from users. Jumper plugs allow operation with a wide range of 8080, Z80, 8085 or Alpha Micro processors.

**FDC-I:** Still the most powerful IEEE-S100 board on the market. Z80A CPU, single- or double-density floppy-disk controller, two serial and two parallel ports, 8k of memory, timer, a 2716 burner, etc., all on one board! Based around the powerful Z80A family and the exceptional NEC765 (or Intel 8272) controller chip, this unit is a microcomputer on one board! CP/M®, MP/M®, Oasis®, Infsoft® compatible.

**PSIO:** A two-parallel, four serial port board designed around the Z80A family, using its powerful vectored interrupt structure. The board is designed for use in multi-user systems and is currently running with the FDC-I and MP/M®. As many as 14 PSIOs may be daisy-chained in one system under interrupt control.

**FDC-II:** A powerful single- or double-density FDC capable of controlling as many as eight drives simultaneously. The FDC-II has an on-board data buffer which allows operation independent of the CPU—no particular CPU speed nor continuous CPU overhead are required when transferring data to or from the floppy disk drive.

**I<sup>2</sup>:** Teletek's Intelligent Interface is capable of simultaneously interfacing several parallel devices, including intelligent hard disks, to the S-100 bus. Its own on-board Z80A CPU (optionally Z80B, 6MHz) runs independently of the system CPU and takes no system memory space. On-board buffer space, DMA I/O transfer, more.

What else do we offer? How about the strongest support in the industry (check our documentation—it's been called the best anywhere). We're dedicated to getting your system up and running properly.

But isn't that what you'd expect from a company that's been around for 13 years?

## Small business computer shipments to be dominated by low cost systems

Unit shipments of small business computers priced under \$20,000 will exhibit the highest compound annual growth rate of all market segments, according to a recent study by Venture Development Corp., Wellesley, MA. Shipments will increase 33.5% annually from 1980 to 1984, accounting for almost 50% of shipments by 1984.

The report segments the industry into three price/performance categories: level I systems are priced under \$20,000; level II systems \$20,000-\$50,000; and level III systems \$50,000-\$100,000. These levels are based on end user prices of "basic" systems. (The addition of peripherals and software options can greatly increase system cost.)

The growth of level I systems will be fueled by price and technological advances. The under \$20,000 price tag, coupled with their advanced capabilities, make these systems attractive, especially to the very small businessman. Lower priced printers and less expensive storage devices will enable the purchaser to obtain the performance of a level II system at a level I price.

Unit shipments of level II small business computers will grow by 26.4% annually. These systems will lose market share, and will account for less than one-third of 1984 shipments.

Level III unit shipments will grow by 27.4% annually. Market share of systems at this level will remain relatively unchanged through 1984.

## Technical information stored on computers

Engineers may be able to use computers to store, call up, and otherwise display some technical information not currently published in professional journals as a result of a study recently begun by Battelle Columbus Laboratories, Columbus, OH.

In a four-month study sponsored by the American Society of Mechanical Engineers (ASME), Battelle researchers are examining ways to use computers as an alternative to publications for communicating with the technical community.

ASME is a technical and educational organization with a membership of 100,000 individuals, including 17,000 student members. It conducts one of the largest technical publishing operations in the world, which includes codes, standards, and operating principles for industry.

## Newspaper on a chip becoming a reality

The first private electronic edition of a complete newspaper was recently introduced. Radio Shack, Fort Worth, TX, revealed the pilot project in cooperation with the Tiffin, OH Advertiser-Tribune.

Subscribers to the newspaper will be able to see the electronic edition via videotex, a method of electronic communications that transfers information over standard telephone lines for display on standard television sets. Users will require an inexpensive videotex terminal, or a personal computer equipped with the simple hardware and software necessary to permit it to act as a terminal.

Publisher Kaj Spencer states, "We believe that some form of electronic newspaper will emerge as an important information medium in the near future. We want to be involved and have a hand in developing the future landscape."

## Europe's first consumer electronics show postponed until 1982

The European Consumer Electronics Show (E C E S 81), originally set to take place at Nuremberg, Germany, during May 10-13, 1981, has been rescheduled for May 1982.

E C E S is a trade-only event, incorporating the latest developments in micro technology within consumer electronics products for home, office and personal applications. The exhibition venue remains the Nuremberg Fair Centre, and revised exhibition dates will be announced soon.

The decision to postpone the event, sponsored by the Trade Fairs International Ltd., W. Midlands, England, followed discussions with existing and potential exhibitors.

The talks indicated that manufacturers in new product areas are encountering difficulties in matching supply with demand levels. Other manufacturers in the more established consumer electronics field are being forced increasingly to concentrate their efforts on maintaining an existing market share, and therefore have themselves postponed previously planned new product launches.

The show represents a new exhibition concept for the European electronics market.

## Organization issues call for technical papers

A call for papers has been issued for the Computer Network Performance

## UPDATE

Symposium to be held April 13-14, 1982 at the University of Maryland, College Park, MD. The symposium is jointly sponsored by the Assoc. for Computer Machinery's Special Interest Groups on data communications (SIGCOMM), measurement and evaluation (SIGMETRICS), and operating systems (SIGOPS).

Papers are expected to focus on public and private packet switching networks, local area networks and vendor network architectures. The actual measurements and analysis of performance in these environments may address protocol standards, hardware and software design and implementations, as well as end user expectations.

Additional information may be obtained from the symposium chairman, Dr. David C. Wood, The Mitre Corp., W-701, 1820 Dolly Madison Blvd., McLean, VA, 22102, (703) 827-6394.

### **Dedicated word processor said to be in decline**

With the invasion of microcomputers quickening, the end of the dedicated limited word processor is in sight as users realize they can have word and data processing in a single multi-purpose system with resulting economy, efficiency and higher productivity, according to Robert F. Wickham, vice president of marketing for Vector Graphic, Westlake Village, CA.

Wickham quoted the Information Word Processing Assoc.'s own recent survey, which indicated that more than 20% of the group's members are responsible for data processing and other information tasks as well as word processing. Wickham noted that the association is in the process of changing its name to the International Information/Word Processing Association.

Citing the more visible evidence of the move toward combined functions, Wickham noted that many microcomputer manufacturers are already bringing out systems that perform both word and data processing, along with the applications software necessary to make this multi-use approach workable.

### **Photo agency is catalogued in computer data base**

The first computerized stock photo agency puts photo researchers, art directors and editors within phone's reach of over 5,000,000 photographs—and the photographers who shot them.

Unlike traditional agencies that charge a search fee, callers have access to the data base without charge.

According to Bert Eifer, president of CompuPix/Rental, Los Angeles, CA, the PhotoBank cuts the cost and frustration of securing photos for advertising, publishing, collateral materials, as well as packaging and displays.

"We function as a referral agency, rather than a photo warehouse. The client profits by direct contact with the photographer who submits his photos for approval, and who often has helpful expertise on the subject.

"Our clients gain instantaneous access to encyclopedic classifications of subjects by a phone call. The librarian provides the caller with the names of one or several photographers whose specialty matches the need", Eifer notes. "From there, the relationship is strictly client-photographer, with no middle-man to cloud the issue or increase the picture rental fee."

### **Foundation awards microcomputer equipment to educational projects**

Nearly \$130,000 worth of microcomputer-based systems have been awarded to 22 educational groups by the Foundation for the Advancement of Computer-Aided Education.

This is the fifth set of grants made by the foundation since its founding in October 1979, and raises to approximately \$625,000 the value of grants given to educational institutions and individuals. The foundation is a nonprofit corporation established to support and develop new methods of learning through the innovative use of small computers. Most of the systems provided under the grants include Apple II personal computers, manufactured by Apple Computer Inc., the foundation's principal sponsor.

### **French government supports videotex marketing programs in U.S.**

The French government recently announced that it would vigorously pursue recent videotex and teletext successes in the U.S.

A message to Antiope Videotex Systems, Inc., from the newly-named minister of Post Office, Telecommunications and Telediffusion, Louis Mexandeau, said "The recent success of French technology in the U.S. constitutes the first stages of a continued and vigorous action on the part of French industry."

Spelling out those successes, Mr. Mexandeau cited "the adoption of the Antiope standard for broadcast teletext tests being conducted on the west coast by CBS, NBC, Group W and KCET-TV.

## Soliciting Capital Investments

Last month's column discussed tax sheltered limited partnerships as a means to raise money for new products. Its key feature is that you do not dilute ownership of your company for seed capital. This month's topic is a seven-step procedure for packaging a new product in preparation for presentation to investors.

At this point, I could easily accomplish my task of explaining how to design a new product package and bring this column to a short conclusion by saying hire a battery of specialists to do it for you. There is a problem with bringing in specialists too early (if at all)—you need to pay them. If you ask product developers the right questions, they become their own specialists.

The first step is to describe the product in technical detail. Summarize your technical language and convert it into simple English. This step will help you discover if a product family

can be generated from one concept. For your first venture, select a highly needed product that can rapidly penetrate the market. This will create a positive track record for future product developments.

The second step is to determine what problem you are solving.

Step 3 raises the questions: Who will use your product? What benefit will your user receive that he does not currently have?

Step 4 concerns competition. Who is currently competing with you? Who will want to compete once your new product penetrates the market?

The fifth step is to develop a target market. Most computer product developers I have encountered have exacting knowledge of the market for their new products. Therefore, identifying the market is usually not the problem; having the financial reach to grasp the market usually is. Describe how you will approach the market (i.e. advertising, computer stores, mail order, etc.). Then decide whether an international market exists for your product. Decide whether you want your investor to share in your international profits or not.

Next, predict the minimum-to-maximum new product in which range you can reasonably expect to sell, with a penetration-peak-obsolescence time frame of your product. Remember to consider what the seed capital will do to expedite market penetration.

The final consideration is profit ratio. How much can you afford to give up to an investor? Note the attitudinal shift here. A venture capital group tells you how much profit (and

## The I.R.S. encourages R & D writeoffs

### MICROSTAT NOW AVAILABLE FOR CBASIC2\*

MICROSTAT is *the* statistics package for microcomputers, and is proving itself to users around the world, including:

Stanford, Harvard, Johnson & Johnson, Duke, University of Washington, UCLA, Lockheed, University of Pennsylvania, Oklahoma State, U.S. Geological Survey, Monsanto, University of Toronto, Sweden's National Central Bureau of Statistics, Utah State, Butler University, SUNY, Van Camps, Texas A&M, University of Wisconsin

and a growing list of other organizations. MICROSTAT's Data Management Subsystem (DMS) makes creating your own data files easy and includes numerous editing and transformation capabilities. Files produced by DMS can then be used to generate statistics in all common statistical areas (e.g., descriptive statistics, ANOVA, correlation, multiple regression, probability and hypothesis tests, nonparametrics and others) plus some not so common ones. Whether pure research or industrial quality control, MICROSTAT is the statistics package for you.

MICROSTAT sells for \$250.00 and is supplied on 8" SD or 5 1/4" (North Star) disks. The user's manual sells for \$18.00 and includes sample data and printouts. Please specify version when ordering. Foreign inquiries, please write directly to us.

\*CBASIC2 is a registered trade mark of Software Systems.

ownership) it will take. In a tax sheltered limited partnership, the opposite is true. Break down your costs to make the prototype into hard and soft costs. Hard costs are out-of-pocket expenses you actually incur: machine time, materials, consultants. Soft costs include your time, energy and skill, which will not be repaid. If you must interrupt your make-a-living time to design a new product, you should be compensated.

It is important to remember that you are not alone. The IRS helps to finance your brainchild by permitting you to pass on the tax writeoff to your investors. This is no gimmick; the IRS encourages R & D writeoffs. The 25% R & D credit is now a reality. Therefore, if someone invests \$100,000 in your new product, he has just eliminated \$25,000 in income taxes—not \$25,000 in *income* but \$25,000 in *taxes*. A tax credit offsets your taxes dollar for dollar; deductions offset taxes only to the extent of your tax bracket.

In addition to the 25% R & D tax credit of \$25,000, your investor benefits from an R & D deduction. If \$100,000 of your investor's capital is allocated to R & D, he gets a tax deduction equal to his tax bracket. (Assume 60% Federal and State combined.) Your investor gets a \$60,000 deduction. Under present tax rates, your investor will have to earn over \$125,000 before he pays a penny in taxes. If the investor earns less than \$125,000, the government owes him money! Thus far, your investor's real cost is not his \$100,000 cash outlay; it is \$15,000 because of tax breaks. This concept is called "negative borrowing" from the IRS by tax lawyers.

The function of using the seven-step formula is to force you to record your new product concept on hard copy. The formula also provides a comprehensive core program that the legal and tax planning can incorporate.

Next month's column will discuss how to attract investors and the new 25% R & D tax credit. □

# SYSTEM 2800

*no other*  
A MAJOR BREAKTHROUGH!

CIRCLE INQUIRY NO. 66

## 20 MByte Winchester Hard Disk with Tape Backup

The SYSTEM 2800, designed for business, industrial and educational applications, is now available with a 20 MByte Winchester Hard Disk and a 20 MByte Tape Drive for disk backup. Created to be innovative and competitive, the SYSTEM 2800 utilizes our existing line of field-proven and dependable "2nd Generation" S-100 Memory, Z80 Processors, Disk Controllers and Serial I/O boards.

As a family of expandable microcomputers intended for single and multi-user applications based on CP/M\*, MP/M\* and OASIS\*\*, the SYSTEM 2800 contains many big system features. Outstanding characteristics such as FAST operation make it a clear market leader. In fact, the SYSTEM 2800 is one of the fastest Z80-based systems recently benchmarked by Interface Age magazine.

\*CP/M and MP/M are Registered Trademarks of Digital Research

\*\*OASIS is a Trademark of Phase One System, Inc.

Other features include the capability to BOOT from any drive including the hard disk, and extensive error recovery. The error recovery prompts the user with detailed error messages and prevents system lock up, all too common to many other systems.

Designed for easy service, the SYSTEM 2800 comes with two 8-inch drives: a choice of single or double sided, double density floppies with up to 2.52 MBytes of formatted storage; 10 or 20 MByte Winchester hard disk; and 20 MByte tape drive for disk backup.

These enhanced features result in a highly reliable, quality built, state-of-

the-art microcomputer that gives you the cost/performance edge you need to be a leader in your field.

Dealers, OEM's and System Integrators share many common needs. Not the least of these is dependable products. That's why we back our SYSTEM 2800 with our established reputation for high quality, superior support, prompt and courteous service, an inclusive one-year warranty and comprehensive dealer support program.

Take the next logical step. See your nearest computer dealer, or contact us for the complete story on our S-100 family of board products and enhanced systems.

### Robotwar

The Robotwar game from Muse Software, Baltimore, MD, written by Silas Warner, runs on an Apple II with 48K RAM, disk drive(s) and a printer.

It is not as much a game as an operating system that exists in a different world from the "virtual machine" normally simulated by DOS. In the Robotwar operating system's universe, there are no more wars with human combatants; instead, each side in a military conflict battles against its opponents with robots. When the robots are placed in the battlefield, combat begins. The human operator at the computer console does not control his robot's actions directly. Rather, the robot is on its own and must be able to survive by being "smarter" (or luckier) than its adversaries.

The battle simulation is quite realistic. Up to five robots appear on a high-res battlefield display. Each is represented by an identifiable geometric figure. To attack, robots fire shells that can hit opponents or explode at a selected distance from the attacker. Audible detonation sounds are produced while the visible shell burst is displayed on the screen. Defense is mainly by evasive action. Sensory input takes the form of a radar unit on each robot. It is visible as a rotating "vector" that sends out visible radar bursts timed with sonar-like beeps.

Suppose, for a moment, that the robots were controlled by paddles or joysticks, and the battle sequences just described were the consequence of human operator controls. Then, Robotwar would be a nice little game, similar to most other combat-type games on the market, but not particularly notable.

This is not the case. The robot's human alter-ego does not directly participate in the attack and defense. The attributes of the robot—its strategy, in other words—is pre-defined at the beginning of the game, and the robots are on their own in the melee.

Each robot's attributes, characteristics and battle strategy are programmed by the human "owner" before it is put onto the battlefield. The way it attacks and defends itself are determined by the program its owner has written. The robot is a virtual machine, assembled out of software and designed to act and react in certain ways by its designer.

This is the ultimate programmer's game. A robot language similar to Basic is used to define the robot. The robot is given a name and its attributes are defined by a list of instructions describing the way the robot will move, when it will fire its cannon, how it reacts to incoming information from its radar unit, where it should look with its radar unit and aim its cannon.

The source program, once written, is compiled into an object program in some less-high-level language. This process is called assembly in the documentation, perhaps to suggest an analogy to building a robot physically out of mechanical parts.

Debugging the code can be accomplished easily; a number of software aids such as a simulated test bench run of the

program (including such things as single-stepping through the commands) are available—with hardcopy, if desired. Error diagnostics provided during the assembly process—and at other times in checkout—are reminiscent of diagnostic messages available in very high-level languages. By itself, the language whose virtual machine is a robot rather than a computer, is an impressive accomplishment.

The writing and editing of the source program are accomplished with a text editor that has features as powerful as any word-processor we've seen. As a word-processor alone, with the ability to print-out text generated by the programmer on a standard printer, the disk is already worth more than the listed price.

The inside cover of the manual says it was prepared using the Super-Text word processor from Muse. We suspect that the program contains large chunks of Super-Text, a program that must be awesome in its own right, if this is any indication.

The manual that describes all this is a classy 80-page booklet that contains the language, editing, assembling and combat aspects of robot use. There is a sample robot program that can be loaded, edited and assembled to get experience.

Several robots already exist on the diskette with the program, and are used to see how robots work on the battlefield. Robots may be stored and retrieved on disk as source code or object code. We envision a users group developing to exchange robots (as programs on disk) between users.

We took the program to DeVry Tech, Chicago, IL, where Patrick teaches. With the assistance of a student we loaded and ran the program to see how it works. The student, Larry

## *This is the ultimate programmer's game*

Farrell, immediately went bananas over the program. He enlisted one of his buddies, Mark Hougaard, into the Robotwar users group over the weekend.

On Monday we found Hector II, a robot the two had assembled using the Robotwar language. Larry and Mark did a good deal of the real evaluating of the system by living in the universe over that weekend. They were both effusive in its praise, and had only one slight quibble: the documentation didn't mention that mathematical expressions are evaluated left-to-right, instead of MDAS, by the robot language.

Hector II was touted as unbeatable by the robots already on the Muse diskette. While this did not turn out to be true when we ran it through its paces, it does at least as well as the others (SQUARE, RANDOM, BOTTOM, MOVER and SCANNER) originally included on the game diskette. If you have a copy of Robotwar, and are just learning how to write programs as you read this, Hector II might make a nice second robot to try assembling after completing the sample from the manual.

From the accompanying listing of Larry and Mark's program, it should be possible to get a little feeling for the Robotwar language. It is similar to Basic, but substantially different in certain respects. Lack of line members is no big loss; the labels, like MSCAN and FIRE, identify branch points in a more comprehensible way than line numbers ever would. In Basic, the statement "C+1 TO C" would be "C = C+1". The ASSIGNMENT operation in Basic has always puzzled students in class when they see it for the first time. "There can't be," they say, "a number that's equal to itself-plus-one." But the '=' sign doesn't really mean equals, it means MOVE C+1 to C.

Later, we have to explain that, in an IF statement, the '=' sign really does mean equals. If the neophyte programmer learned to program by doing Robotwar, there would be no

# THE DAWN OF A NEW AGE

## The 2nd Generation<sup>TM</sup> is here!

MEASUREMENT systems & controls proudly introduces its new and exciting "2nd Generation" family of S-100\* compatible products. Each has been specifically designed for use with multi-user and network operating systems such as MP/M, CP/NET, and OASIS. Every product is fully tested and burned-in, comes with a 1 year guarantee, and offers you features not currently available from any other source.

### **Z80 PROCESSOR BOARD**

— The most powerful CPU board available today. Outstanding features include 4MHz operation, high-speed serial and parallel I/O utilizing DMA or programmed control, eight vectored priority interrupts, and a real time clock.

**MULTI-USER SERIAL I/O BOARD** — For use in expanded systems requiring up to eight additional serial I/O ports. Features include: 16 maskable

vectored priority interrupts, RS-232C interfaces with full handshake, asynchronous or synchronous operation with asynchronous baud rates to 19,200. Available in four or eight channel versions.

### **DOUBLE DENSITY FLOPPY DISK CONTROLLER BOARD**

— controls up to four 5¼-inch or 8-inch disk drives using IBM soft sector formats. It features 1K of on-board buffering, DMA controlled data transfers and the performance characteristics of the superior NEC 765 chip.

### **64K BANK SELECTABLE MEMORY BOARD**

— Features include I/O port addressing for bank select with 256 switch selectable I/O ports for the memory bank addressing. The memory is configured as four totally independent 16K software-selectable banks, with each bank addressable on any 16K boundary.

\*All products meet the new IEEE standards.

### More on "C" Programming

In last month's column, I began a description of a programming language I have developed based on the C language. I described the basic philosophy behind it and introduced the data structures and some of the logical and arithmetic operators. This month, I continue the discussion by describing most of the executable statements.

#### Execution section

The executable portion of a function follows the data definition section and has the following general format:

```
executable__section
-----
EXECUTABLE STATEMENTS
-----
end_executable__section
```

The executable statements consist of:

ASSIGNMENT STATEMENTS  
FLOW OF CONTROL STRUCTURES  
FUNCTION INVOCATIONS

#### Assignment statements

Assignment statements are the main data manipulation statements in any programming language. In C.plus, they have the following general statements in any programming language. In C.plus, they have the following general format:

set VARIABLE\_\_SPECIFICATION equal\_\_to EXPRESSION ;

The variable\_\_specification consists of the name of a valid variable (i.e. one that has been defined in the data definition section). It may include a subscript specification in the case of array variables. It may include dot notation in the case of structure elements.

The expression consists of variable\_\_specifications, function invocations and operators. We may think of the operators as being logically divided into two categories, namely unary operators and binary operators.

#### Unary operators

The valid unary operators are:

address\_\_of  
value\_\_pointed\_\_to\_\_by  
incremented  
decremented  
negative  
complemented

In addition to the above standard operators, certain value-returning functions can be considered as unary operators.

#### The address\_\_of unary operator

The address\_\_of unary operator takes the following form:

address\_\_of VARIABLE\_\_SPECIFICATION

For example:

set x equal\_\_to the address\_\_of y;

would determine the machine-dependent address of the variable named y and place that address into the variable named x.

#### The value\_\_pointed\_\_to\_\_by unary operator

The value\_\_pointed\_\_to\_\_by operator takes the following form:

value\_\_pointed\_\_to\_\_by  
POINTER\_VARIABLE\_\_SPECIFICATION

For example,

set p equal\_\_to the value\_\_pointed\_\_to\_\_by r ;

would get the value of the variable that is pointed to by the pointer variable r and place that value into the variable p. Note that r must be a pointer type variable. In general, the variable p should have the same (non-pointer) type as the variable that is pointed to by r, i.e. if P is the integer, then r should be pointing at an integer variable.

Note also the use of the word "the" in this statement. It gets replaced by the compiler with a null character, so that it actually has no effect on the compilation. It does, however, make the statement a bit easier to read—one of the main reasons for using C.plus.

#### The incremented and decremented unary operators

The incremented and decremented operators have similar forms, as follows:

incremented VARIABLE\_\_SPECIFICATION  
VARIABLE\_\_SPECIFICATION incremented  
decremented VARIABLE\_\_SPECIFICATION  
VARIABLE\_\_SPECIFICATION decremented

The incremented operator causes the contents of the named variable to be incremented by 1. The decremented operator causes the contents to be decremented by 1. The position of the operator before or after the variable\_\_specification is significant. For example, in

set x equal\_\_to incremented y;

the content of the variable y is incremented and the result is put into x. So both x and y end up with the same value, namely the incremented value of y. (If y had contained 34 before this statement, the both x and y would contain 35 after the execution of this statement.)

On the other hand, if the incremented operator appears after the variable\_\_specification, then the incrementation operation occurs after the assignment operation. So, in

set x equal\_\_to y incremented;

the value of y would be placed into x and then y would be incremented. If y had the value of 76 before execution of this statement, after execution x would be equal to 76 and y would be equal to 77.

The same principles apply to the decremented operator.

#### The complemented unary operator

The complemented operator has the following general format:

complemented VARIABLE\_\_SPECIFICATION

This operator returns the bit-by-bit complement of the contents of the specified variable. Note that this operator cannot appear after the variable specification, as is the case with incrementing and decrementing.

# When it comes to microcomputer software we wrote the book.

How do you stay up-to-the-minute with the rapidly changing world of microcomputer software? Get the Lifeboat Catalog.

## The Latest Innovations

The new Lifeboat Catalog is packed with the latest state-of-the-art software. And if we publish a new program after the latest catalog has gone to press, we enclose a flash bulletin in your copy.

## The Greatest Selection

Because Lifeboat is the world's largest publisher of microcomputer software, our catalog offers you the greatest selection of programs for business, professional and personal use. Our more than 200 programs range from integrated accounting and professional practice systems to office tools for bookkeepers and secretaries to sophisticated tools for programmers. Included are business systems, word processors, programming languages, database management systems, application tools and advanced systems utilities.

We specialize in software that runs on most small business computers. Our more than 60 media formats, including floppy disks, data cartridges, magnetic tape and disk cartridges, support well over 100 computer brands of domestic and foreign manufacture.

Software with full support

## Get Full Support

We give the crucial dimension of after-sales service and full support to everything we sell. That includes:

- A telephone hotline where technical and customer service representatives will answer your questions 11 hours a day.

- An update service for software and documentation.

- Telephone, telex and mail-order service at the New York headquarters and at overseas offices in England, France, Switzerland, West Germany and Japan.

- Export service providing software delivery to six continents.

- Subscriptions to *Lifelines*™, the monthly magazine that offers comparative reviews, tips, techniques, identified bugs and updates that keep you abreast of change.

## Get It Now

Lifeboat now serves tens of thousands of satisfied customers with our breadth of up-to-date, fully tested, fully supported and competitively priced software.

You may not need all we offer, but we offer just what you need. After all, we wrote the book.

2211

For example, in

set x equal\_\_to complement y ;

if y contains the bit pattern 00101110, the complement of this (i.e. 11010001) will be placed into the variable x. The content of y, however, remains unchanged.

### Binary operators

Any operator that acts upon two values and returns a single value is considered a binary operator. The valid binary operators are:

plus  
minus  
multiplied\_\_by  
times  
divided\_\_by  
modulo  
left\_\_shifted  
right\_\_shifted

The following examples should be sufficient to explain most of the common binary operators:

set x equal\_\_to y plus z;  
set x equal\_\_to y minus z;  
set x equal\_\_to y multiplied\_\_by z;  
set x equal\_\_to y times z;  
set x equal\_\_to y divided\_\_by z;

Note that *multiplied\_\_by* and *times* are equivalent functions. The more traditional forms of these operators are also available as follows:

	C.plus version	Traditional
plus	plus	+
minus	minus	-
multiplied__by	multiplied__by	*

times  
divided\_\_by

The rest of the binary operators require a little more explanation.

### The modulo binary operator

The *modulo* binary operator has the following general format:

VARIABLE\_\_SPECIFICATION\_\_1 modulo  
VARIABLE\_\_SPECIFICATION\_\_2

This operator returns the remainder after variable\_\_specification\_\_1 is divided by variable\_\_specification\_\_2. For example, in

set x equal\_\_to 5 modulo 2 ;

the variable x would receive a value of 1, since 5 is divided by 2 gives 2 with a remainder of 1. The *modulo* operator operates only on integer values and returns an integer value. Of course the 5 and/or 2 could have been integer variables rather than constants.

### Left\_\_shifted and right\_\_shifted binary operators

The *left\_\_shifted* and *right\_\_shifted* binary operators have similar functions. In each case, a value is shifted in a bit-by-bit manner. Left-shifting is comparable to multiplying by a power of two and right-shifting is comparable to dividing by a power of two. No bit-wise wrap-around occurs.

For example, in

set x equal\_\_to y left\_\_shifted z bits;

the value contained in the variable y is shifted left the number of bits specified by the variable z and the result is placed into x. The word "bits" compiles into a null word and is included only to make the statement more readable.

### Increment and decrement statements

It is often quite handy to be able to increment or decrement the value of some variable. It can, of course, be done with an assignment statement such as

set the number\_\_of\_\_characters equal\_\_to the  
the number\_\_of\_\_characters plus 1;

but it does not read well. The function of the statement is not intuitively obvious. So we have a special set of statements to handle it. They have the following forms:

increment VARIABLE\_\_NAME;  
decrement VARIABLE\_\_NAME;

For example:

increment the number\_\_of\_\_characters ;

would add one to the number\_\_of\_\_characters variable. I regret that, due to the design of C, we cannot have the more general form

increment VARIABLE\_\_NAME by INCREMENT\_\_VALUE ;

so that we could have a statement such as

increment the number\_\_of\_\_characters by the word\_\_length ;

We will just have to wait for the developers of C to make a few changes. Or maybe our readers would like to try writing a compiler for Structured English.

Next month's concluding installment will describe the flow-of-control structures (the decision and iteration structures) and will present the listing of the C.plus file that defines all of the necessary keywords. □

# THE MICRO- MATHEMATICIAN

by Dr. John C. Nash

## Binary Machines That Round

The May 1981 column gave the program PRECN, which works reasonably well on most machines. It is, however, a variant of a method originated by Dr. M. Malcolm in the *Communications of the ACM*, Vol. 15, pg. 949-951, November, 1972. I have discussed the portability of this code (and some of the attendant headaches) in the Proceedings of the Second Rocky Mountain Symposium on Microcomputers of IEEE Computer Society, Long Beach, CA (publication number 78CH-1387-OC, pg. 222-239).

Unfortunately, machines that perform rounded binary arithmetic will give strange answers in either variant of the precision program. Digital Equipment PDP-11 computers have such arithmetic, as Dr. Jacques Gelinis pointed out in a letter. To see the problems and the changes that can be made, we must delve into the arithmetic itself. Consider a representation in 4 binary digits and consider rounding away from zero.

To find the machine precision and radix, we can either add a progressively smaller number to 1.0 or add 1 to a progressively larger number. These procedures are taken in turn.

We represent  $A = 1.0$  as 1.000; now we add to A a number B, which takes on smaller and smaller values. We enclose the rounding bit in parentheses.

B	Intermediate sum	Rounded result	$A + B = ? = A$
$2^{-1}$	1.100	1.100	N
$2^{-2}$	1.010	1.010	N
$2^{-3}$	1.001	1.001	N
$2^{-4}$	1.000 (1)	1.001	N
$2^{-5}$	1.000 (0)	1.000	Y

The machine precision is computed as  $2^{-4}$ , even though the correct value is  $2^{-3}$  (represented as 0.001). The radix is not found by incrementing A and adding the machine precision.

$A := A + 1$  gives A as 10.00 binary

$A + 2^{-4}$  gives 10.00(0) rounding to 10.00 binary

The radix is thus computed as 10.00 binary, or 2 decimal. As mentioned, we can also try to increase A to find the radix first.

A	A + B	(A + B) Rounded	$(A + B) = ? = A$
1	10.00	10.00	N
2	11.00	11.00	N
4	101.0	101.0	N
8	1001.	1001.	N
16	1000(1).	1001* $2^1$	N
32	1000(0)1.	1000* $2^2$	Y

The radix is found by now increasing B until  $(A+B)$  is bigger than A. For  $B = 2$  we have, in binary  $A + B = 1000(1)0$ , which is rounded to  $1001 * 2^1$ . The radix computed by forming  $(A+B) - A$  is

$$(1001-1000) * 2^2 = 1 \times 2^2 = 4$$

Thus neither method is satisfactory for this type of machine. In order to get around these difficulties, we must include extra code for such machines. For the program given in the May issue, we could add the following lines of code.

```

274 REM ADDITIONAL CODE FOR BINARY MACHINES
275 IF A = 2 THEN 470
470 REM TEST FOR BINARY ROUND
480 LET E = (A + 2 * B)
490 LET F = (A + 4 * B)
500 REM D = A + B HAS VALUE 1.0
510 REM E AND F SHOULD BE SAME IF ROUNDED
520 IF E <> F THEN 280 \ REM CHOPS
530 LET C = C - 1 \ REM 1 TOO MANY BITS COUNTED
540 PRINT "ROUNDED" BINARY ARITHMETIC IN", C,
    "BITS"
550 STOP

```

Unfortunately, this code is not enough for all cases. We still do not know if rounding is away from zero or toward plus infinity. Extra code to test such possibilities can be included, but after a time, the program begins to become messy. The principal purpose of such programs is to encourage the user

**Once the properties of  
arithmetic are understood,  
the program has fulfilled  
its objectives**

to think how the machine works with numbers. Once the properties of the arithmetic are understood, the program has fulfilled its objectives.

The PDP-11 shows another interesting feature of floating point numbers, which is also part of the Draft IEEE Binary Floating-Point Standard (P754). The actual arrangement of the PDP-11 floating-point "word" of 32 bits ( $2 * 16$  bit words) uses

23 bits for the mantissa

1 bit for the sign

8 bits for the exponent and its sign

However, 23 bits are not enough to give a machine precision of  $2^{-23}$ ; we need 24. Floating point numbers are normalized so that the first significant digit is just to the right of the implicit radix point. In our 4-bit example, 3 is represented

$$.110 * 2^2$$

An un-normalized equivalent is

$$.0110 * 2^3$$

To normalize, we shift left and decrement the exponent until a non-zero digit is in the first position. For binary machines, this is always a 1. Therefore, we consider it, along with the radix (binary) point as implicit, thereby gaining one bit of precision at no cost in memory. This "hidden bit" must, of course, be put back in accumulators. PDP manuals state that various guard bits (digits) may be used in the floating point hardware. Also, optimizing compilers may keep numbers in accumulators and not round them, thus frustrating precision-finding programs.

With the Hayes direct-connect Micromodem II™, your Apple II can communicate by phone with the outside world. You can access information networks like The Source for a variety of business and personal applications, exchange programs with friends anywhere in North America, and even use your Apple II when you're away from your home or office.

**Dependable.** The Micromodem II is so dependable it comes with a *two-year* limited

warranty. That's another reason why it's the largest selling direct-connect modem for Apple II computers.

**Programmable.** Automatic dialing and answering? Of course! We include programs on disk that dial phone numbers for you, send messages while you're away, and much more!

**Complete.** You get everything you need to communicate with other Bell 103 compatible modems at 110 or 300 baud. The serial interface

is built-in, and we even include our FCC-approved Microcoupler™ that plugs directly into any modular telephone jack in the U.S. — you don't even need the phone!

**S-100, too.** The Hayes Micromodem 100 gives S-100 microcomputers all the advantages of our Micromodem II!

Put the outside world *inside* your computer with a data communications system from Hayes. Available at computer stores nationwide — call or write for the location nearest you. And don't settle for anything less than Hayes.

# The Hayes Micromodem II opens up your Apple II to the outside world.

**The Evan's Report Is In There — Somewhere!**

The old-fashioned mess of paper filing systems can drive you over the edge. You waste time and money in inefficient searching and manual sorting. In today's business environment, this is both outdated and unnecessary.

DATADEX, the information organization system from IUS, hands you your valuable information immediately — when you need it from your APPLE II desktop computer.

You view your stored information on the APPLE™ screen or create reports with simple commands. DATADEX provides just the detailed and professional looking reports needed in today's business world.

With DATADEX, management performance is improved using faster, more accessible information and, best of all, DATADEX has been shown to pay for itself in two months of normal secretarial time. Visit your local dealer and experience DATADEX yourself. IUS, 281 Arlington Ave., Berkeley, CA 94707 (415) 525-9452.

**DATADEX** The Information Organization System. **IUS** 

All the above ideas are good reasons why standardization of floating-point arithmetic will assist users by removing one source of differences between results of the same program on various machines. I have on several occasions had to spend valuable time verifying that such differences were not the result of program error. In one case, a service bureau spent a week looking for an error in a program I had implemented. The program computed some vectors describing a system of interest. For certain inputs, some of the vectors could only be determined to lie in a plane. The program would then choose an orthogonal pair of vectors in that plane. The service bureau programmers were simply told to convert the program from a Univac 1108 to an IBM 370. With different arithmetic and rounding, the pairs of vectors generated by each machine were entirely dissimilar, and a grave source of frustration to programmers who tried to "fix" things.

Let's look at the exponent range of floating point numbers. We can write simple loops to find the biggest and smallest representable numbers. For the largest, we take our knowledge of the floating-point arithmetic and fill every digit of the mantissa with (radix - 1). Thus for the decimal arithmetic Radio Shack/Sharp Pocket Computer, we can start with  $A = 9.999999999$ . Letting  $B = 10$  (the radix), we now execute

```
100 LET A1 = A
110 LET A = A * B
120 GO TO 100
```

Eventually an overflow occurs and execution is halted, leaving  $A1$  as the largest representable number. On some machines, it may be necessary to print  $A1$  on each pass through the loop. For the Pocket Computer, we find  $A1 = 9.999999999E + 99$ . The smallest number is likely to be  $1.0 * B^{-M}$ , where  $M$  is the largest exponent value. Some machines, may not use a signed exponent, but assume that the value of the exponent is implicitly to be reduced by some shift. This may result in an

unbalanced exponent range. We can discover the smallest representable number using the code.

```
10 LET A = 1.0
20 LET B = (radix)
30 LET A1 = A
40 LET A = A/B
50 IF A <> 0 THEN 30
60 PRINT A1
70 STOP
```

On machines that treat underflow as an error, this will fail at line 40 at some iteration, while machines that underflow to zero will stop normally. The Pocket Computer underflows to zero with  $A1 = 1.E - 99$ . Also,  $0.9999999999E - 99$  evaluates to zero.

On the Pocket Computer, it is easy to set the values of variables because there is no input/output conversion between the decimal notation used externally and the internal non-base 10 representation.

### Error corrections and updates

Re IA Sept 80, page 34, several readers found that SCRUNCH was hard to acquire. I believe new marketing arrangements are being made. SCRUNCH is a collection of numerical methods in Basic translated from reliable Fortran codes by Kris Stewart who is currently at the Jet Propulsion Lab.

Also on page 34, lines 10, 11, 13, 18, 26, 34, 35 replace capital S with capital Z.

On page 36, listing 1B, line 1140 should read

```
1140 IF Q <= T9 THEN 1180 (i.e. 1180 instead of 1190)
```

Re IA May 81, page 30, on line 26 replace *argument* with *arrangement*.

On page 33, line 180 of listing 1 should read

```
180 IF D > A THEN 160 (i.e. D instead of A + B to force storage of the sum) □
```

## WE'VE BEEN USING COMPUTERS IN BRITAIN FOR A LONG TIME . . .

. . . So you know you're getting a wealth of experience from the new range of software from LITTLE GENIUS. Programmed by some of Britain's brightest experts, there are teach-yourself BASIC programming packages for the Apple, ITT 2020, and Pet and packages for learning PASCAL, too. Each package has three modules: elementary, advanced, and disk operation to help you get the best from your micro. So don't go round in circles - you'll find a dealer stocking them not a stone's throw away!

Separate disk modules available for \$69.95 or all three modules in a special '3-in-1' package for \$179.95. Ask your dealer or write to:  
LITTLE GENIUS, SUITE 504, ALBANY HOUSE,  
324 REGENT STREET, LONDON W1R 5AA. ENGLAND.

**Radio Shack, The Leader in Small Business Computers  
Also Has Computers for Your Home!**

# **Introducing the Lowest Cost Color Disk System Ever— Radio Shack's TRS-80**

Radio Shack now offers disk drives for our popular TRS-80 Color Computer. Now you can have superb high-resolution color graphics and fast, "on-line" access to large amounts of data.

**Only \$1198.** Our new \$599 disk kit makes our TRS-80 Color Computer with 16,000 characters (16K) of internal memory and Extended Color BASIC language a versatile, low-cost computing system that's ready to attach to any TV (not included).

**Stores 156,000 Characters!** Just plug in the Program Pak™ controller to add disk storage to the Color Computer. The Disk Operating System—an enhanced version of the Color Computer's Extended Color BASIC language—is completely contained in the Program Pak, so you get a full 156K-bytes of on-line storage.

**Easy to Use.** The 16K TRS-80 Color Computer lets you create sophisticated color diagrams, business charts and even simple animation—using just a few simple one-line commands! This gives experienced programmers incredible power, yet makes it easy for beginners, too. We take you from the ground up with over 500 pages of easy-to-read documentation.

**Instant Fun and Games.** And just for fun, you can plug in any of our game cartridges. Battle starships in outer space, conquer dinosaurs from a prehistoric world, or just brush up on your chess.

**Fully expandable.** Your TRS-80 Color Computer Disk System can expand with up to four drives for over 626,000 characters of storage! And the additional drives are only \$399 each. Add up to 16K more memory, a printer and other accessories anytime.

## **Radio Shack's TRS-80—The Best-Supported Microcomputer in the World!**

The TRS-80 line of computers is backed with a wide selection of accessories, software, and service. We can even show you how to get up-to-the-minute news, current stock market reports and even electronic mail using your TRS-80! It's all available today at over 8000 Radio Shack stores and dealers, and at 185 Computer Centers nationwide.

CIRCLE INQUIRY NO. 84

# Learning with Micros

by Louis E. Frenzel

## Reader Responses

This month's column focuses on feedback we've received from readers.

In my April, 1981 column, I discussed the potential of a learning system made up of a microcomputer and a video disk unit. This combination forms a powerful and very effective teaching tool. Such systems are now technically feasible and are being used and tested in a variety of learning applications. However, such systems will never become widely used because of their high cost, the technical complexity, the lack of software and the difficulty of software development. The column was positive about the potential and desirability of the micro/video combo, but was negative in its outlook with regard to future widespread application of such systems.

One reaction to my column appeared in an *InfoWorld* article, "Teclar Seeks Instructional Revolution" by Dennis Briskin (Jul 6 81). It tells about a newly formed company, Teclar Corp., Placerville, CA that develops interactive instructional programs for a system made up of an Apple II micro interfaced to a random access video tape player. The company has put together a practical low cost system and is apparently developing interactive learning programs for it. They felt my comments regarding the future and practicability of micro/video systems were too critical.

There is a key difference between the tape system Teclar supplies and the micro/video disk combination I focused on. It is relatively fast, cheap and easy to develop video tape learning programs with the hardware and techniques available. But transferring that program to a disk is a bit tricky. It is extremely expensive to tool up for a disk—and usually the prices will be impractically high unless you have high volume. Programming the disk for interaction is also complex and expensive. Finally, there are very few sources for disk duplication services. The facilities are already in full use just trying to meet the demand for the movie disks that are essential to the sales of both the Magnavox laser system and RCA's CED system. Unless an organization has the volume and the money and a worthwhile application, the micro/video disk combo is not what I'd call your practical, down-to-earth everyday learning system—at least not yet. You won't see such systems in the home or even in schools, but you will see them in military and industrial applications.

## Computer literacy

Dr. Ed Martino, a teacher and computer consultant, wrote recently about a computer literacy class for teachers that he conducts at Nova University in Fort Lauderdale, FL. Apparently my June, 1981 column generated a lot of discussion and several extra credit responses. Since these responses come from teachers in the field either using or planning to use micros, I feel they are particularly important. While I don't have

space to cover them all, here are a few excerpts that give a perspective on those who will actually use micros in their work:

"Science teachers are using computers in many applications of discipline... Computers can be an effective learning and teaching tool in the classroom. Computer systems provide an individual approach to learning that can be used to maximize the potential learning experiences for slow as well as gifted students."

Douglas S. McDermott

"Since I am a guidance counselor in a large middle school, I would like to see a microcomputer taking over much of the time-consuming work that keeps us from counseling... a microcomputer could, hopefully, save many working hours that are now spent researching and verifying data."

Ms. Robin Rosen

"As a senior high school teacher of the educable mentally retarded, I believe that microcomputers can be a wonderful tool for the Exceptional Ed. teacher to use."

Ms. Tracy Barrack

"Microcomputers are having a definite impact on education. They are well-suited to meet the needs of elementary school teachers. The needs of elementary school teachers are diverse because they deal with all subject areas—not just one or two... In conclusion, microcomputers can enhance learning and assist teachers in many ways: computer-assisted instruction, word processing, simulation games, graphics and record keeping."

Ms. Christie Lis

"However, on the other side of the coin, we have a very good argument to support the use of microcomputers in the classrooms... I know several administrators who are taking courses and encouraging their staff to take courses, so that they can integrate computer education into their present curriculum."

Eva Dolores Samms

Incidentally, I think Dr. Martino has a very practical approach to teaching micros. He encourages teachers to think in terms of how the micro can be used in the regular curriculum in addition to the special computer awareness and literacy programs. But it is Dr. Martino's approach to programming that is interesting. He essentially discourages teachers from trying to program their own software. His theory is that most can't or won't learn to program. But with available software, this should not keep teachers from using micros. (Dr. Martino expressed his views on programming in his article "Don't Start With Programming" in the November 10, 1980 issue of *InfoWorld*.)

## Computer music education

Teachers of music are apparently finding micros to be a real help. There is a considerable amount of activity going on around the country in developing computer-based music learning programs. There are several sources of information on this subject that music educators may want to look into.

Cecil H. Pretty of Eugene, OR sends a list of computer music education resources. He recommends that those attempting to develop programs contact the following: Richard Shirey or Virgil Hicks, Music Education Div., School of Music, U. of Akron, Akron, OH 44325; National Consortium for Computer Based Music Instruction (NCCBMI), Computing Centre, Western Washington U., Bellingham, WA 98225; and Minnesota Educational Computing Consortium (MECC), 2520 Broadway Dr., St. Paul, MN 55113. □

### Some useful tax programs

Both this and next month's columns will focus on several useful programs that are ready just in time for the upcoming tax season. With these programs, it will not only be possible to prepare those complicated tax forms, but also to plan several "what-if" strategies to minimize income taxes. Although the programs are of most interest to the professional tax advisor, many tax-conscious individuals will find them informative and useful.

The first program, Howardsoft, is a tax preparation aid for the Apple computer by Howard Software, La Jolla, CA. The program retails for about \$150 and includes a complete package to prepare the federal tax return and most of the ancillary schedules. The program requires at least 48K to run effectively, although only one disk drive is required. The user can employ either DOS 3.2 or 3.3, and 13 or 16 sector disks. (The program is supplied with 13 sector disks.)

At this writing, Howard Software is almost ready to issue programs to calculate state taxes for California, New York, New Jersey and Illinois. Perhaps other states will be added.

The programs were written by a doctorate engineer with an interest in investments and a good understanding of the tax law. The programs were intended to be used by the local CPA firm to prepare tax returns for clients—the return could conceivably be run during the client interview. The software can also be used for tax planning by entering the data, viewing the result on the screen instead of printing it out, then making changes in the data for alternative calculations.

There is no comparison to hand calculating taxes; the computer programs are a quantum leap forward in convenience, accuracy and versatility. The programs allow calculations in whole dollars or pennies, and can be integrated with the preparation of some forms by hand.

To begin the use of the software, a menu appears containing six modes to choose from, including: Mode 1—in which the system displays any updates or corrections that don't appear in the manual; Mode 2—same as mode 1, except that the updates are printed on the system printer; Mode 3—prepares storage disks (formats them); Mode 4—the tax preparation mode (main mode); and Mode 5—printing out the tax forms.

The "feel" of the program is similar to preparing a return by hand. One generally starts with the main form (the infamous 1040) and goes right on down each line item. When the preparer comes to a line that requires some detail calculations, such as the interest income or dividend income line, he prepares a separate schedule. Sometimes, the preparer may even desire to make up a separate detail schedule supporting the schedule that supports the one figure ending up on the 1040.

The tax program follows the same line of logic in the preparation of the return. When the user selects mode 4, a

menu is displayed containing a listing of most of the schedules for the federal tax return. The intelligent way to proceed is to start with the 1040 form itself, entering the information until you get to a point at which a supplementary schedule is needed. The user then saves the data accumulated so far and exits back to the main menu, choosing the appropriate form to fill in. The menu consists of the following:

Instructions	Schedule 2106
Form 1040	Schedule 3468
Schedule A	Schedule 4562
Schedule B	Schedule 4726
Schedule C	Schedule 4797
Schedule D	Schedule 5695
Schedule E	Schedule 2210
Schedule F	Save last Dollars
Schedule G	Print out forms
Schedule R & RP	Restart Program
Schedule SE	End Program
Schedule TC	

The new version will contain three additional schedules, #2119 (sale of principal residence), #4625 (minimum tax on tax preference items) and #6251 (alternative minimum tax computation). You'll note that on the menu there is no indication as to what the various forms are for. The company assumes that the user is sophisticated enough to know what they are or how to look them up.

The programs are not designed to provide a working knowledge of the tax law or any of its loopholes. The programmers assumed that the user was fairly familiar with the process of preparing income taxes, and also that the preparer had a good grasp of the forms that comprise most tax returns. Even though I am a CPA, since I do not specialize in taxes, there were a few of the forms indicated above that I had to look up to know what they were for. The instruction manual does *not* contain any explanation of the forms, nor does it contain any explanation of the ins and outs of the tax law.

### Custom back-up possible

The programs contain some very useful functions. One is the ability to create detail schedules at the user's specification. Most income tax preparation programs and commercial time sharing or service bureau tax return services do not have this feature—it's back to the old pencil and paper. With these programs, this is not necessary—or at least the need is greatly reduced. The user can, for almost any line item for any of the schedules or the main 1040, jump to the option that allows the creation of a custom back-up schedule. Thus it is possible to completely computerize the preparation of the return.

Another nice aspect of the Howardsoft programs is the ability to create files that can be updated or changed later. This allows, for example, for the CPA to begin the preparation of a client's return without having to complete it. The typical case is, of course, for the client who makes an appointment and comes in with all of the supporting documentation, except for one critical element, without which the return cannot be prepared. With this program, the preparer can proceed without the last critical piece of data. It can be added in when available. The storage mode also allows the programs to be used as tax planning tools. An initial set of assumptions can be entered and run; then alterations to the stored data can be made and the results observed.

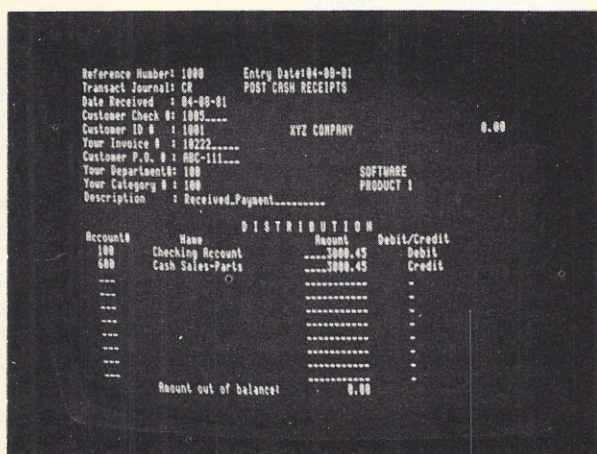

The programs contain features that allow the accountant to use the system to maintain a data base for each client. As information comes to his attention during the year, it can be entered into the system, and the appropriate records updated.

Once all the information is in and the taxes are calculated, the forms can be scanned on the terminal. Then, at some point, it's time to prepare the hard-copy. The programs are designed to print on the standard 1040 form. These may be obtained

# Computerize your bookkeeping without terrifying your bookkeeper.

Introducing The Boss:™ the most advanced, yet most understandable, financial accounting system. Designed to automate your bookkeeping without confusion or mistakes.

Typical screen format - actual photograph.

If "fear of the unknown" is standing between you and computerization, you should find out about The Boss.

The Boss system is immediately comprehensible to bookkeepers because it utilizes virtually the same format they're used to.

So even someone with no previous computer experience can easily learn and operate The Boss system.

**Features seldom found in packaged software.**

The Boss system is fully interactive, fully departmentalized and exceptionally fast. It can generate an astounding number of complex reports at the touch of a button.

General Ledger and Accounts Receivable and Payable transactions can be entered in any order in a single program.

Up-to-the-minute financial reports can be obtained without batch processing.

The Boss system computes financial ratio analysis.

It protects data from unauthorized personnel as well as computer malfunction.

And it has the largest programming and storage capacity of any micro system.

The Boss runs on most small business computers with CP/M® or similar operating systems. Its cost is only \$2,495.

**Get full support from Lifeboat.**

The Boss is brought to you exclusively and supported completely by Lifeboat Associates, world's largest computer software publisher. For more information about how you can profit from this extraordinary financial accounting system, send us the coupon below. Or call (212) 860-0300.

For more information on The Boss, mail coupon to Lifeboat Associates, 1651 Third Avenue, New York, NY 10028.

from the company or ordered from independent distributors. If you prefer, you can have the 1040 form printed out. Now the IRS refuses to accept a 1040 form that isn't at least on a photocopy of it's form. So if you print out the 1040 form itself, you'll have to manually transfer the figures to the official form. In most cases, it's a safe bet that the user would want to print out the information on the official form 1040.

When it comes to the tax return schedules, the program prepares a computer generated form—i.e. it does not print out on the official form. That's no great sacrifice, since the forms are easier to follow than the official ones. In addition to the schedules that are an integral part of the return, the user has the option of printing out all of the supporting schedules that he has prepared. They can be printed out as either support to the tax return, or optionally as additional support for the taxpayer's files.

For the CPA or other professional tax preparer, the program may provide a unique and cost effective way of streamlining the tax preparation procedure. In the right hands, the program could be used during the client interview, with the tax return generated at the conclusion of the interview. That would be a real time saver. On the negative side, Howardsoft's tax program assumes that the user has a working knowledge of the tax law and the principal forms used to prepare the returns. Also, the professional should not be lulled into thinking that the program covers every tax situation—to the contrary. Especially in the area of penalties, there are some situations, such as underpayment penalties that might be overlooked if the preparer is not alert. Thus, the program is not for the novice. As to computer knowledge required to run the programs, none is necessary. About all a user has to know is how to put the disk in the drive and turn on the computer and the printer.

One of the more impressive sets of software that we have reviewed in this column, the individual Tax Planner from Aardvark Software, Milwaukee, WI, is designed to run on the

Apple computer that has at least 48K of memory, one or more disk drives and DOS 3.3 or the Pascal language system.

The tax planner is exactly what its name implies—it is a system that allows the user to perform a number of alternative tax calculations to determine what the federal tax liability will be under different assumptions. The program was written by a group of CPAs with over 17 years of experience. (In other words, they understand taxation and what the average tax practitioner needs.) From a review of their programs, they also understand computers and how to put together a professional, easy-to-use and powerful set of software.

The software answers a real need among accountants for a simple but powerful product to provide analyses of alternative tax computations. The software will make computations of federal tax liability, add-on minimum and alternative minimum tax, ten year averaging of lump-sum distributions, limitations and carryovers of capital loss, charitable contributions and medical expenses. It allows the user to immediately see the tax effects of changes in income or expense items, and display the results or print them out (in a form suitable for presentation to clients). The software also has provisions that allow the user to save information for later changes or review.

### Illustrations are helpful

The manual is well put together, with numerous illustrations of what the screen should look like, and a guided tour through the basics of using the system. There are two detailed illustrations that give the novice user a good understanding of how the system works. Testing the system to do a simple tax plan, it performed very well.

The best part of the software is the data entry sequence. It's organized so that you go "down the line" on the typical 1040. At each question, the user is prompted to fill in up to five alternative values for the taxpayer and his spouse. There are a lot of little aids that the program contains to make the data entry sequence easier. For example, it is possible to enter just one figure for up to five alternatives, then skip to the next line item. It's also possible to make an entry, then increase it by a percentage for the other alternatives (i.e. increase a \$25,000 wage by 10% for alternative 2, then 10% of that for alternative 3, etc.).

The program contains 72 line items that can be entered. That sounds like a lot, but you'll usually use far fewer. The program has an easy method of skipping from one to another. In fact, they allow the user to go back and forth and change items at will. The entry sequence is easy to learn and comfortable from a user standpoint.

One of the best aspects of the system is the organization of the manual. It contains a short summary section that basically contains all necessary information for the user to know to run the system, and a whole set of sample forms that allow the user to gather information in the order that the system will request it. There are four pages of forms that may be easily reproduced on an office copier.

Once the information is entered, the system calculates the taxes. The user can then view the results on the terminal or have the system printer print a report. The terminal will display up to two alternative calculations. The system printer will generate a report of up to four on a page. The analysis generally fits on one page. The useful feature of both the printing program and the terminal display program is that the operator can specify which of the alternatives is to be presented. Thus it becomes practical to run perhaps five alternatives, choose three that appear most reasonable, then print out those on a written report to the client. The user can then re-access the data file, input alternative numbers and re-run the entire system.

The system provides outstanding software for the professional accountant who wants to be able to give on-line answers to the most common questions of tax planning, enabling an impressive and meaningful tax planning session. The system could justify the purchase of an Apple, particularly if a tax preparations program is also purchased. □

CIRCLE INQUIRY NO. 62

At Hayes, we don't believe in second best. Or planned obsolescence. We believe in taking the state of the art to the limit. Our new Smartmodem, for example, is the most sophisticated 300-baud originate/answer modem you can buy. And yet, it is perhaps the easiest-to-use modem ever.

**RS-232C Compatible.** Smartmodem lets any RS-232C compatible computer or terminal communicate by phone with other computers and time-sharing systems located *anywhere in North America*. You get full and half-duplex operation with both Touch-Tone\* and pulse dialing.

**Auto-Answer/Dial/Repeat.** Smartmodem can answer the phone, dial a number, receive and transmit data, and then hang up the phone — automatically! If desired, Smartmodem will even repeat the last command. You can depend on Smartmodem for completely unattended operation.

**Completely Programmable.** Smartmodem can be controlled using

# Hayes Stack™

## Microcomputer Component Systems

any programming language. Over 30 different commands can be written into your programs or entered directly from your keyboard.

Smartmodem also includes several switch-selectable features that let you tailor performance to your exact needs. You can "set it and forget it" for the ultimate in convenience.

**Built-in Audio Monitor.** Thanks to an internal speaker, you can actually listen to your connection being made. You'll know immediately if the line is busy or if you reached a wrong number —

*and you don't even need a phone!*

**Status at a Glance.** Seven LED's indicate Smartmodem's current operating mode: auto-answer, carrier detect, off hook, receive data, send data, terminal ready and modem ready. You're never left in the dark!

### Direct-Connect Design.

Smartmodem is FCC registered for direct connection to any modular phone jack — there's no acoustic coupler to cause signal loss and distortion.

**Smartmodem, Smart Buy.** Professional quality features. Versatile performance. A full two-year limited warranty. A suggested retail price of only \$279.

What more could you want? Perhaps the matching Hayes Stack Chronograph, an RS-232C compatible calendar/clock system.

Check out the Smartmodem wherever fine computer products are sold.

And don't settle for anything less than Hayes.

Smartmodem.  
The ultimate concept in modems  
is now a reality.

### Some Basics of Applesoft Basic

Once you've done your VisiCalc models and played Adventure and Space Invaders, it's time to start writing your own programs. Using Applesoft and DOS (Disk Operating System), you can start programming your Apple II to organize information to your exact needs—something canned programs never quite accomplish.

Programs that deal with information have three basic components: the gathering, storing and retrieving of information. With the Apple II, information can be entered from the keyboard, the game controllers, the disk or any peripherals plugged into the slots. Once that information is entered, it is generally stored on the disk.

In Applesoft Basic, there are three commands used to enter information into the computer—GET, INPUT and PDL.

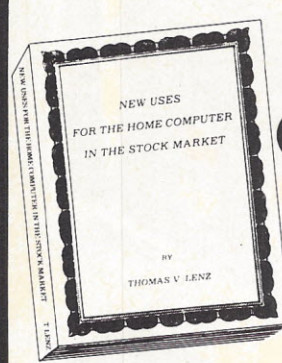

GET and INPUT are generally used for keyboard input; however, input from devices in the slots can also be done with these commands. PDL is used exclusively to input the setting of the game controllers.

Displaying information on the screen is generally done by the PRINT command. PRINT is also used to send information to devices in the slots such as printers.

These same commands are used to store and retrieve information from the disk. But the disk commands precede the GET, INPUT and PRINT commands so that the disk is accessed instead of the keyboard or screen. The simplest form of entering information is using the INPUT command. Let's develop a program to input the name and address of someone and save it in the computer. Listing 1 illustrates our first attempt.

### Cursor at top left

The program begins at line 1000 with a HOME command, which clears the screen and puts the cursor (the location where the next character will be printed) at the top left corner of the screen. The next line is a PRINT command, which titles the screen. The next two lines are null PRINT commands; each will cause the cursor to move to the left of the screen and down one line. At line 1040, the first prompt for user input occurs. The PRINT command ends with a semi-colon, indicating that the cursor should not go to the next line. This is to keep the question mark that the INPUT command will print on the same line as the NAME prompt. The INPUT

“NEW USES FOR THE  
**HOME  
COMPUTER**  
IN THE  
**STOCK  
MARKET**”

**A new book—contains a gold mine of ideas!!**

Do you have the great stock and commodity trading advantages given by the home computer to the few who properly use it? This book gives you a new insight into cycles and seasonal factors as they affect stock and commodity prices. It gives you solid tools for measuring and profiting from them. Obtain ideas and programming never before published. The writer has over 20 years experience as a stock broker and 8 years experience programming computers. Book is 8 1/2 inches by 11 inches and has 254 pages and 34 programs written in TRS-80 BASIC.

The book borrows methods long understood by radio and electronic engineers but overlooked by most statisticians. Thus, it is able to present methods, never before published, of stock and commodity market timing using cycles and seasonal variations.

To order book—send check \$19.95 and your name and address to:

command will assign the characters to a string variable called NAME\$. (The fact that NAME\$ is a string is indicated by the dollar sign at the end of the variable name.) String variables can be assigned up to 255 characters. Since most names will fit in 24 characters, the string variables are large enough for most uses.

Line 1110 points out one of the problems with Applesoft's variable name conventions. The natural thing to do is to use STATE\$ as the name instead of S2\$. However, two problems will occur. First, Applesoft only uses the first two letters of a variable to distinguish variables. Thus STREET\$ and STATE\$ are the same variables to Applesoft.

Second, the variable name STATE\$ contains the letters AT, which is an Applesoft command. If you use "AT" as part

# Amdek

From picture perfect.

To letter perfect.

Amdek  
Color-I  
FCC/UL approved

Amdek  
Video-300

At Amdek, we make monitors for people who demand state-of-the-art color. And for people who know that crisp, clear text display is an art in itself.

Our versatile Color-I 13" video monitor features standard NTSC composite input, front-mounted controls and a built-in speaker with audio circuit. Our popular Video-300 12" Green Phosphor monitor has an easy-to-read, non-glare screen, 18 MHZ band width and 80 x 24 character display.

Both offer easy portability, with lightweight cabinetry and molded-in handles. And both are fully

compatible with most computer and word processing systems. So compare our performance with other monitors. Then compare prices. For quality and value, you'll choose Amdek.

NEW THIS FALL: our advanced high resolution Color-II monitor with interface board for Apple II compatibility. Color-II features RGB, TTL input and 560(H) x 260(V) resolution for crisp 80 x 24 character display and exceptionally sharp color graphics. Ask your dealer about an Amdek Color-II, Color-I, or Video-300 monitor today.

# MEGABYTER

8"  
IBM  
Diskette

## ZVX4 FOUR TIMES THE BYTE

The ZVX4 MEGABYTER is for the APPLE II user who wants to DOUBLE file size, expand the capability of existing business software, and make other SERIOUS applications more viable.

Now you can have compatibility with IBM, INTEL, CP/M\*, Z80 Softcard\*, UCSD Pascal, and others.

Look what the MEGABYTER dual density 8" floppy disk controller, with its LSI circuitry and reliable industry standard IBM 3740 format, means to you:

### INCREASED STORAGE

- Increase online storage to 4 Mega bytes
- Double your maximum accounts and file size
- Add high capacity efficient hard disk backup
- Control up to 4 Shugart SA800/SA850 drives

### IMPROVED COMPATIBILITY

- Operate APPLE DOS 3.2 and 3.3 mini disks
- Preserve existing software investment
- Interchange data with other computers

### SIMPLIFIED OPERATION

- Reduce disk handling and I/O slot usage
- Gain automatic single/double density operation
- Change to double sided drives with one switch

Available at your Apple dealer. Call or write today!!

of the variable, the program will try to use it like a command. Thus it is always a good idea to list a program after it is typed in to see if Applesoft interprets your variable names as commands instead of names. Finally, line 1210 shows how more than one variable can be combined on a line to format the correct city-state-zip code sequence.

This program shows some of the basics of programming, but it really isn't as functional as we might like. A list of improvements would include: 1) if a mistake was made on a previous input line, we might want a way to return to that line and make a correction; 2) since our mail label will probably only allow for a fixed number of characters, it would be desirable to indicate to the user how many letters are allowed at each input; 3) since we lose the data each time we finish

```

the program, we need a way to save the label information on the disk where we can retrieve it at some future time; 4) since we can't send chunks of the screen in the mail, we should optionally send the labels to a printer.

To address the first two improvements, the INPUT command can be discarded in favor of the GET command. This, however, introduces greater complexity since a GET command simply returns each keystroke as it is typed, instead of automatically handling the RETURN and left and right arrow keys.

### Corrections are possible

Listing 2 improves the user interface at the expense of greater complexity in the program. The number of characters in an entry is now indicated by underscores and the user can correct errors on previous lines by pressing the escape key to go up one line.

Lines 1000 to 1030 create a variable UL\$, which contains 32 underscore characters. Since the keyboard cannot generate this character, it is obvious to the user that this is the entry area of the screen. Line 1040 assigns a size to each of the array variables listed. Since the majority of the program is the same input routine, the arrays will allow the reuse of most of the code. Without arrays, this program would be five times larger.

The FIELDS\$ array contains the names of the fields. The SIZE\$ array contains the number of characters in each field. The DA\$ array contains the actual entries made by the user

for each field. Finally the SA\$ array is a temporary array that stores each character of the user input separately. This is compressed in a DA\$ array variable each time the next field is entered. Line 1050 assigns the various control characters (RETURN, right arrow, left arrow, and ESCape), which the keyboard generates to variables so a test can be made for each one. Lines 1060 through 1100 assign the names of the fields, and lines 1110 through 1150 assign the number of characters to be input for each field.

The input screen is cleared and the fields identified in lines 1200 through 1260. Presenting all fields at once allows the user a complete template to fill, so questions as to whether the city and state belong in the ADDRESS field or if the state is abbreviated are answered in a concise manner.

The main entry loop starts at 1300 and continues to 1690. Basically, this positions the cursor for the next input, performs a GET command, then determines if any control function keys or a normal keystroke are entered.

The first test is line 1330, where the keystroke is tested for the RETURN key. If it is the RETURN key, the individual characters entered for this field are collected into the appropriate DA\$ array element, and the next fields' DA\$ element is spread out into individual characters. If this is the last line, the mail label is printed. Otherwise, the input for the next line is begun.

The next test is for the ESCape character, which is used to go up the screen instead of down. This allows editing previous lines of input. Finally, the tests for left and right arrow are made and the cursor is positioned accordingly.

If none of the control functions are pressed, the keystroke must be actual data, and line 1660 displays the character and stores it in the SA\$ array. Again the last step of the program formats the data into a mail label.

Now that we have a nice user interface to gather information with, the next step is to save this information to the disk. Next month's column will address this issue. □

# THE COMMODORE LOGBOOK

by Mike Heck

## Controlling the Purse Strings

Theodor of California (Gardena, CA) is a leading manufacturer of handbags, distributing coast-to-coast. The company employs about 200 production people and is engaged in manufacturing a product that has a high labor content, yields a low profit margin and is seriously threatened by foreign competition. In a search for greater efficiency, the company hired the management consulting firm of Victor Ardon and Associates (Beverly Hills, CA), who specialize in helping clients, usually manufacturing plants, reduce costs and improve efficiency. Ardon has found that the use of microcomputers is one of the most cost effective tools available.

In 1978, Ardon installed the first Pet computer at Theodor to help the company estimate the cost of manufacturing a particular style of bag. Since that time, Ardon has

incorporated two more systems into Theodor—one to create tickets, used in the incentive program, and one to manage the warehousing of the merchandise.

Producing handbag styles that sell involves keeping pace with the whims of the fashion world. New styles are brought into the line at least four times a year. Although there may be no more than 30 bag styles in one line, it may be necessary to cost out 100 styles before putting a line into production.

Costing, the art of estimating all the manufacturing costs of an item before it is produced, involves determining both material and labor expenditures. Traditionally, this is done by sitting down and producing a copy of the item. The first step in determining material cost of a particular bag is collecting and inputting the unit material costs (e.g., price per yard of fabric or clasp prices). Information about both material and labor costs need not be entered for every costing; once the information is entered into the computer, it remains stored for future use and can be periodically adjusted using an inflation factor.

The computer asks for the dimensions of each piece that will be used, adds an appropriate scrap factor, makes any adjustments, then calculates each component's costs. When all material costs are in, the computer provides several sub-totals, giving a breakdown for each type of material, as well as a total for all material costs.

Labor is calculated differently. A list of all possible operations necessary to produce any type of bag and the time each operation requires is stored on disk. In order to determine "ideal" labor cost, the computer uses this standard data in selecting the operations that apply to a given style and add up labor costs. This ideal figure is then factored by an effective performance rating of any given department to obtain a realistic reflection of the anticipated actual labor costs. If the style is totally new, a "learning curve" factor can also be added.

The computer can also add any extraordinary costs, such as overhead and indirect labor. Ardon estimates that this costing method is four times as fast as the previously used manual system. The present costing is so much more efficient that many more samples are being costed out. As such, when costs are a little high for a given item, the design can be easily modified on paper until the right combination is found.

The plant is run on an incentive system: workers get paid according to the amount of work they do. In the past, as an operator finished each procedure, he would record an entry into his daily production log. The three clerks responsible for collecting this information were always swamped, as were the supervisors, who were called upon whenever there was a disagreement between worker and clerk. Much of this confusion was eliminated by installing a ticket system. This involves providing the worker with a paper ticket at the time the task is completed. These tickets, which provide a clear record of each day's production, can be kept by the worker as proof of his daily effort.

Conventional ticket systems used by most garment manufacturers involve the use of special ticket machines and special ticket stock. Theodor uses a Commodore computer, disk drive and printer in place of the conventional equipment. Over 4,000 tickets are printed each day. No special ticket stock is required, because tickets are printed on the same mailing label sheets commonly used for addressing. Each ticket carries information identifying the operation and bag style and data regarding the time allotted to the job and the amount of pieces per hour designed for the operation. These tickets travel with the work.

Upon completion of the job, the operator peels off the label and pastes it on a structured ticket sheet (also produced by the computer) bearing the name of the operator. This sheet acts as the operator's reporting form. The data from the ticket sheet is manually entered into the computer at the end of the day. Calculations to arrive at both percent performance for each operator, as well as earned time, are performed automatically by the computer. Each individual's daily performance is printed and posted in the plant.

- INSPECT...TALLYING...REPLACING.
- ADD, SUBTRACT, MULTIPLY, DIVIDE, GIVING, ROUNDED, ON SIZE ERROR.
- Generates optimized 8080 machine language at up to 500 statements per minute.

WE WELCOME C.O.D.'s

(415) 751-1522.

Theodor uses the third Commodore system to manage its warehouse. With the aid of this computer, the company has increased its manufacturing production to such an extent that it began to run out of warehouse space. A close examination of the warehouse revealed that much space was wasted through inefficient allocation.

Each style of bag was allocated enough space to hold a full stock of that particular bag. But at any one time, few of these storage areas were completely full. By allowing the computer to allocate space as needed, rather than providing the maximum space for each bag, the problem of under-utilized storage space was solved.

Specific areas are no longer permanently allocated to particular styles. Instead, any bin of any rack can take any style of any color bag. This is possible because when a load is brought from the factory, the computer directs the loader where to put the stock. The computer then keeps track of where each load is placed, in addition to which areas remain open. The system also directs placement, so that all bins of one particular style are located as close as possible.

When it comes time to pick up an order, the computer directs the operator to the closest bay containing an adequate quantity of bags in the desired style. As an added benefit, since the computer is keeping track of all this information, an accurate, up-to-date inventory is always maintained. Users can get a printed record of inventory at any time.

### Program for the Vic 20

Since the Commodore Vic 20 is a very powerful computer in its own right, it can be put to work on many business applications. Although it is not within the scope of this column to teach programming, the accompanying program demonstrates the use of the Vic to do some real calculations applicable in any business.

The following program will calculate salvage value based on the original price, number of years and rate entered. Type the program in as shown and run it. To make the program more useful, it will ask if you want to see what the salvage value will be for other years using the same data. The actual formula that does the calculation is a single line (90). The remainder of the program accepts the data and performs other formatting and logic. From time to time, small programs that do different business calculations will be presented here so you can collect a library of helpful routines. □

## Attention TRS-80 Mod II owners: P&T CP/M® 2 has more to offer!

**More Disk Storage** 596K bytes with double density on standard single sided disk drives. It that's not enough, versions are available for double sided expansion drives (1.2M bytes per disk) and the Cameo Hard disk system (10M bytes.)

**More CRT Functions** P&T CP/M 2 has the most advanced screen driver available for the Mod II including: erase to end of line/screen, insert/delete line, cursor addressing, non-scrolling area on screen, and much more.

**More Serial I/O Capabilities** The serial drivers in P&T CP/M 2 support ETX/ACK, XON/XOFF, and request to send handshaking. Direct control of serial ports is also available for special applications.

**More Documentation** We provide the standard CP/M manuals and our own 150 page manual written specifically for P&T CP/M 2.

**More Utilities** We have added 14 of our own utility programs for the Mod II to the standard CP/M utilities.

**More Useful System Functions** P&T CP/M 2 has all sorts of useful features you won't find elsewhere: type-ahead buffer for keyboard input, system time of day clock, automatic program execution and lots more.

### Prices

Standard P&T CP/M 2	\$185
P&T CP/M 2 for Shugart 850 2 sided drives	\$220
P&T CP/M 2 for Cameo Hard Disk system	\$250

We also carry other software packages, single & double sided expansion drives and the Cameo Hard Disk System. Write for details.

# POWER IN YOUR POCKET

by Bob McElwain

## The Sharp PC Printer

The Sharp Pocket Computer (PC-1211) is now available in computer stores and most places that handle Sharp calculators. This is the same unit Sharp manufactures for the Radio Shack TRS-80 PC. Only the dealer labels are different. The suggested retail price for either unit is \$249. Since the Sharp model is carried by independent shops, you may be able to find modest discounts.

Two features of Sharp's model should be mentioned. The unit comes with a hard plastic carrying case that should protect it better than the soft case of the TRS-80. Beyond the 90 day warranty, Sharp will repair a computer for a standard rate of \$45, or replace it if it can't be repaired.

Documentation includes a manual, a set of 125 programs and a beginner's guide to programming in Basic. The manual, like Radio Shack's, is not a good tool for the beginner. The set of programs, however, will be helpful. The programs include topics from engineering, mathematics, statistical analysis and business.

The Sharp computer has 1,424 bytes of memory that can be used for program or variables, with additional memory reserved for 26 variables. The language is Basic, a simple subset of what's usual on larger computers. The 24 character dot matrix display provides for input and output, one line at a time. Program lines can be 80 characters long. Full cursor control allows scrolling up or down and left or right, with edit capability. The right portion of program statements longer than 24 characters is displayed by moving the cursor to the right.

The computer will run for 300 hours on a set of inexpensive batteries. Programs and data remain intact when the computer

is switched off. Battery operated and weighing only six ounces, it can literally be slipped into your pocket.

The big news is that Sharp and Radio Shack both have a printer now. It's manufactured by Sharp and features the Epson unit, used so successfully with Sharp's calculator line. The printer outputs 16 characters to a line, 60 lines a minute, printing a single row of dots at a time. It uses standard size rolls of plain paper, 1<sup>25</sup>/<sub>32</sub> inches wide.

When printing or listing a program, output is continued to additional lines as needed. Even though the lines are short, the tape is easy to read. The unit is powered with a rechargeable Ni-Cad battery. Unfortunately, the battery is not user replaceable.

The printer unit includes a cassette interface. The computer slips into the printer unit as it does into the cassette interface. (If you own an interface and buy the printer, you can do as I did; toss out the old interface. Chances of resale aren't high.) It'll take a big pocket to handle the computer connected to the printer unit, but the combination is still extremely portable. From Sharp or Radio Shack, the price of the printer unit with cassette interface is \$150.

Incidentally, Sharp also has a cassette interface, priced at \$50. But think carefully before buying the interface alone. If you can use a printer, it's only \$100 more. If you buy the cassette interface, then later buy the printer unit, you'll have lost \$50.

For the printer unit, Sharp has a convenient carrying case. At this writing, Radio Shack does not. Radio Shack's ribbon cartridge uses black ink, while Sharp's uses a violet color. The black may be a bit easier to read. The cartridges are interchangeable.

I suspect the Sharp PC-1211 is only a beginning. I'm looking for much more in handheld computers from Sharp.

## Inventory estimate program

Let's consider a practical application for a pocket computer. As an example of what can be done effectively, we'll develop a program that can be used to find the real cost of inventory purchased. It's a simple, straightforward approach that can provide the solid information needed for good judgment. If you'd like a more detailed development than the abbreviated form included here, send me a stamped, self-addressed envelope with your request c/o the magazine. I'll forward a copy.

We'll begin by building a formula. Here are the variables used.

- C = Cost per unit of inventory
- D = Discount rate to be exercised
- F = Total freight-in
- K = Monthly cost per linear foot of shelf length
- L = Estimated length of shelf, in feet, required to store/display this inventory
- M = Number of months to sale of last item
- P = Percent of waste expected
- Q = Quantity purchased
- R = Monthly rate for money borrowed or interest lost on capital
- S = Estimated number of sales per month
- T = Total cost of this inventory purchase

The initial cost per unit, C, must first be decreased by the amount of any discount to be taken. The discounted cost is  $C - C \cdot D$ . The number of months to last sale, M, can be computed from an estimate of sales per month, S:  $M = Q/S$ .

A formula can be developed by combining the following. The total initial discounted cost is

$$C \cdot Q \quad (A)$$

A monthly interest rate of R, as a decimal fraction, charged for the quantity on hand at the end of each month, accumulated over M - 1 months, gives a total interest cost of

$$C \cdot R \cdot Q \cdot (M - 1)/2 \quad (B)$$

# datasouth announces... THE TOTAL PRINTER PACKAGE!

With so many matrix printers on the market today, it may seem tough to find exactly the right one for your application. Some models may offer the speed you need, others the communications flexibility and still others the forms handling capability. But no printer offers **all** the features you need...until now.

The DS180 matrix printer provides the total package of performance features and reliability required for applications such as CRT slave copy, remote terminal networks and small to mid-range systems. Not a "hobby-grade" printer, the DS180 is a real work-horse designed to handle your most demanding printer requirements. And pricing on the DS180 is hundreds of dollars below competitive units.

**High Speed Printing**—Bidirectional, logic-seeking printing at 180 cps offers throughput of over 200 lpm on average text. A 9-wire printhead life-tested at 650 million characters generates a 9x7 matrix with true lower case descenders and underlining.

**Non-volatile Format Retention**—a unique programming keypad featuring a non-volatile memory allows the user to configure the DS180 for virtually any application. Top of form, horizontal and vertical tabs, perforation skipover, communications parameters

and many other features may be programmed and stored from the keypad. When your system is powered down, the format is retained in memory. The DS180 even remembers the line where you stopped printing. There is no need to reset the top of form, margins, baud rate, etc....it's all stored in the memory. If you need to reconfigure for another application, simply load a new format into the memory.

**Communications Versatility**—The DS180 offers three interfaces including RS232, current loop and 8-bit parallel. Baud rates from 110-9600 may be selected. A 1K buffer and X-on, X-off handshaking ensure optimum throughput.

**Forms Handling Flexibility**—Adjustable tractors accommodate forms from 3"-15". The adjustable head can print 6-part forms crisply and clearly making the DS180 ideal for printing multipart invoices and shipping documents. Forms can be fed from the front or the bottom.

If you would like more information on how the DS180's low-cost total printer package can fill your application, give us a call at Datasouth. The DS180 is available for 30-day delivery from our sales/service distributors throughout the U.S.

Some items demand use of a waste factor for breakage or spoilage. If P is a percentage expected to be lost, as a decimal fraction, we have

$$P * C * Q \quad (C)$$

There are many ways to compute warehouse costs. Here I've assumed an estimated monthly cost for a linear foot of shelf space, K, is available. Then the shelf cost is

$$L * K * M / 2 \quad (D)$$

Combining A, B, C and D above and adding in F, the cost of freight-in, gives

$$T = C * Q + C * R * Q * (M - 1) / 2 + P * C * Q + L * K * M / 2 + F$$

which can be written as

$$T = C * Q * (1 + R * (M - 1) / 2 + P) + L * K * M / 2 + F$$

The accompanying program is written in Basic for the Sharp or Radio Shack pocket computers. It should run with little modification on any computer with Basic available.

If expected sales are only three units per month, results will be (other factors held constant): TOT COST/UNIT \$4.144 and STD SELL PRICE \$7.02.

At three units per month, it is 24 months to last sale. Interest and shelf costs are significantly increased. These factors account for the increased cost. To see the effect of interest costs only, use the same data as above, but let the shelf length be zero. This will make shelf cost zero. For S = 10 units/month, I got \$3.502 cost/unit. For S = 3, I got 3.977, or about 48¢ more. In use, any factors, except cost and quantity, can be zero.

#### Additional note

Green Rivers Systems (Auburn, WA) has announced Pocket Tape I, a machine language program that enables Radio

Shack's TRS-80 models I and III to read/write cassette tapes that were written and can be read by the TRS-80 PC. The program allows the use of the pocket computer for input and output, while leaving the data processing to a larger system. It was not stated that programs can be moved, but I suspect they can be.

The program looks interesting. There's an additional hardware interface required for the model I. It should run fine on any model III with cassette or disk. □

# STRUCTURED SYSTEMS FINANCIAL SOFTWARE.

## ANYTHING LESS IS CHEATING YOUR OWN BUSINESS.

Penny wise and software foolish. One of the best ways to cheat your business is to waste a whole lot of time on solutions that don't work, or that can't grow with your business. And frankly, we get phone calls every day from computer users who've tried to get by on "bargain" software, and found that "bargain" software is the most expensive kind a business can own.

Here's a fact: if you have a real need for a computer in any of these areas:

General Ledger  
Accounts Receivable  
Accounts Payable  
Order Entry  
Inventory Control  
Payroll,

any business software less than Structured Systems Financial Software is cheating your business. You'll cheat yourself out of lots of time. Time spent with

systems which aren't designed for high volume use. You'll cheat yourself out of reliable audit controls and reliable error prevention features. Out of the training you invest in a system you outgrow when you need to add more disk storage, more customers, more data. You'll be cheating yourself out of a software bargain in the truest sense of the word—the greatest value for your dollar.

CP/M® microcomputer systems can do the job of minicomputers. Structured Systems software makes that potential a reality. Right now, hundreds of businesses are profiting from the financial controls and operating efficiency of SSG financial software. So can yours.

**Take it easy on yourself.  
But sentence your computer  
to hard labor.**

# The MX-100. Not just better. Bigger. Epson.

Our MX-80 was a pretty tough act to follow. I mean, how do you top the best-selling printer in the world?

Frankly, it wasn't easy. But the results of all our sleepless nights will knock your socks off.

The MX-100 is a printer that must be seen to be believed. For starters, we built in unmatched correspondence quality printing, and an ultra-high resolution bit image graphics capability. Then we added the ability to print up to 233 columns of information on 15" wide paper to give you the most incredible spread sheets you're ever likely to see. Finally, we topped it all off with *both* a satin-smooth friction feed platen *and* fully adjustable, removable tractors. And the list of standard features goes on and on and on.

Needless to say, the specs on this machine — and especially at under \$1000 — are practically unbelievable. But there's something about the MX-100 that goes far

beyond just the specs; something about the way it all comes together, the attention to detail, the fit, the feel. Mere words fail us. But when you see an MX-100, you'll know what we mean.

All in all, the MX-100 is the most remarkable printer we've ever built. Which creates rather a large problem for those of us at Epson.

How are we going to top this?

*Your next printer.*

# Versatile I/O Controller

## Teletek's FDC-I S-100 Board

by Roger H. Edelson

If your system is set up anything like the one I use, you probably have a CPU board, an I/O board, two to six memory boards and a disk controller. If you also have a monitor in residence (PROM/ROM storage) and a system clock, this will probably add two more boards. Another card slot can be taken up by a PROM programmer board, giving a total of approximately eight S-100 cards to form a complete working system. The FDC-I by Teletek, Sacramento, CA, manages to pack most of the above functions on a single well designed, nicely constructed S-100 compatible board.

Drawing only 1.5 amps from the 8-volt power supply and about 50 mA each from the +16 and -16 volt supplies, the unit is a full microcomputer on a board. The card is designed to meet the specifications of the almost issued IEEE S-100 bus standard. For industrial users, it's nice to know that the workmanship conforms to the requirements of MIL-STD 454. This fully solder-masked board provides the user with a 4 MHz Z80A microprocessor based system, a Z80A CTC time and real-time clock, and up to 8K bytes of intermixable EPROM/RAM.

For the serial I/O function, the board uses a Z80A SIO providing two RS-232 ports with software selectable baud rates ranging from 45 to a maximum of 9,600 baud. The faster 19,200 rate is not available, nor are current-loop interfaces provided—but who really uses current-loop circuitry anymore? Both serial ports include full handshaking signals for use with synchronous transmission. In addition, the serial ports may be operated under interrupt control for faster software

response. Two parallel ports are provided by a Z80A PIO chip, which gives one bidirectional 8-bit port plus four handshaking lines. The second parallel port has three data lines available, which may be configured as either input or output lines. The remaining lines of this port are used for on-board functions within the unit; if these reserved functions are not required, the lines become available for user specifiable applications.

As part of the standard unit, a 2K monitor is provided, which has routines for initializing the LSI circuits of the board and programming the Intel-type 2716 EPROMs. The EPROM programming circuitry is also included on the board, with the exception of the 25 v programming supply, which is probably the single major oversight of the entire design. The user must supply +25.5  $\pm$  0.7 volts at 50 mA to program the EPROMs. Unfortunately, this is not usually an easy task—most small businesses and home users don't have a power supply hanging around. While this technique provides the ultimate degree of protection against inadvertently destroying the contents of an EPROM, it was possible to provide the high programming voltage required with a dc-to-dc converter (a blocking oscillator would have been sufficient), then use a manual switch to protect the EPROM.

The on-board monitor also provides routines for assigning input and output devices, moving, modifying and verifying memory contents and routines for reading and writing from the floppy disk. These routines will support either single or double density, single or double sided and (with some modifications) both 5¼-in. and 8-in. drives may be intermixed. The monitor also provides the routines necessary to interface the floppy

disk drive to the system, which means that the operating system need only be able to access the monitor "hooks" to perform disk operations.

The floppy disk drives are controlled by essentially a single integrated circuit—the NEC 765 floppy disk controller. This chip provides single and double density data transfer, under software control, simultaneous seek operations on all drives connected to the system (a real time saver), IBM compatible formatting and an ANSI standard 50 pin disk drive connector. When interfacing to 5¼-in. drives, a 50 to 35 pin adapter card from Teletek must be used. This adapter saves the space that would be required to provide a dedicated connector for the 5¼-in. drives. The NEC IC also provides automatic error-checking via CRC (cyclic redundancy character), software selection of the track sector size from 128, 256, 512 or 1024 bytes.

The device has been designed to be fully IEEE S-100 bus compatible, and will allow memory bank selection using the Cromemco bank select protocol. There is no need for a "phantom" line on this board, as the FDC-I is fully aware of the lack of a memory and will only enable the data input buffers during an external memory access. All that is necessary is to supply a 64K RAM board, either static or dynamic. The board supplies the necessary refresh signal timing, and any essential peripherals to have an up and running microcomputer. The \$795 list price seems reasonable, but a special price of \$595 is presently offered to new customers.

### Sturdy construction

The board is well-built; it is constructed to meet the requirements of MIL-STD 454, with a gold plated edge connector providing all 100 pins. While not all the pins are used, it is nice to have them in case user modifications are desired. The board is fully packed; to conserve space, the resistors are mounted on end. One additional nice touch is that all the integrated circuits are socketed, not just the memory and the expensive LSI chips; this is very useful when trouble-shooting a board. As a further indication of the professional design and construction techniques, the clock oscillator is provided by a Motorola LOCO II, 16 MHz unit, rather than the less reliable two NAND gate approach.

The heart of the board is the Z80A CPU operating in conjunction with U-25, a bipolar PROM, which "maps" the four memory sockets. Depending upon the memory map stored in this PROM, the unit may be configured for any desired mixture of 2716 EPROMs or 1K, or 2K, static RAM. The table gives some of the popular memory arrangements available as selectable options. The board I tested was equipped with the "standard" option, M1; however, only a single 2716 PROM was in place, along with the Mostek MK4118N, 1K RAM. This configuration is skimpy, but fully adequate to test the board operation.

Another bipolar PROM, located at U-12, is programmed to generate the S-100 status signals from the Z80A mode lines, a very elegant method of solving this decode problem. These signals are required for IEEE S-100 compatibility, and are also used by the peripherals to coordinate their activities. The I/O select logic is performed with more "standard" logic design employing LS138 3-input, 8-output decoders. These lines are used as chip select signals to select either the SIO, the PIO, the CTC or the FDC data port.

The Motorola LOCO II crystal oscillator circuit provides the basic timing reference for all board timing, which is divided by U-15, a 4-bit counter, to form the necessary operational frequencies—8, 4, 2 and 1 MHz signals are available as outputs from this circuit. The company has provided jumpers near this circuit to allow the user to change the Z80A clock frequency and the 2 MHz clock.

Probably as important as the Z80A is the central element of the floppy disk control portion of the FDC-I, the NEC uPD-765 floppy disk control chip. This IC provides for control of up to four floppy disk drives that can be a mixture of both 5¼-in. and 8-in. drives with appropriate software. The intermix control is through one unused line of PIO-B. This control line is connected

**Table of Memory Arrangements**

<i>Option</i>	<i>Description</i>
M1*	3 programmable EPROMs (U-34, 35, 36), from E000 to F7ff, and 1 RAM (U-37), from F800 to FFFF. The FDC-I occupies 8K of memory space.
M2	2 programmable EPROMs (U-34, 35), from F000 to FFFF, and no other memory on-board. The FDC-I occupies 4K of memory space.
M3	1 non-programmable EPROM (U-34), from F000 to F7FF and no other memory on-board. The FDC-I occupies 2K of memory space.
M4	2 programmable EPROMs (U-34, 35), from E000 to EFFF, and 2 RAMs (U-36, 37), from F000 to FFFF. The FDC-I occupies 8K of memory space.
M5**	1 non-programmable EPROM (U-34), from F800 to FFFF, and no other memory on-board. The FDC-I occupies 2K of memory space.
M6**	1 non-programmable EPROM (U-34), from F800 to FFFF, and 1 RAM (U-37), from F0000 to F7FF. The FDC-I occupies 4K of memory space.

\*This is the standard option.

\*\*This option provides the greatest amount of contiguous RAM space.

to the control inputs of the two LS157 IC7s, which are part of the floppy disk controller phase locked loop. Depending on the level of this control line, the VCO and the phase-locked loop are configured for either mini- or maxi-drives, and the pre-write compensation is also adjusted. The NEC 765 also provides for either single or double density and will operate with both single and double sided drives. The unit employs the reasonably standard disk data encoding scheme, where single density information is recorded using FM (frequency modulation) formats, and double density is achieved with MFM (modified frequency modulation) techniques. The MFM data pulse density is almost exactly one-half of the combined clock and data pulse density used to write FM, or single density. Some penalty must be paid in the data recovery circuitry for the sophistication of

MFM recording, but as the bit density on the recorded media is approximately equal to the single density case, the disk bit error rate is no worse when double density recording is used—and you get twice the data storage per disk.

The unit also provides a jump-on-reset circuit combined with a reset and power-on-clear function. These two circuits force the internal EPROM to address P0 whenever the S-100 signal PRESET (pin 75) is active. This EPROM has been programmed with a jump instruction to the on-board memory, allowing the reset, or power-on-clear, to jump absolutely to any desired location. With the board configuration supplied to me for testing, this jump circuitry and software takes you to the on-board monitor.

The FDC-I provides interrupt functions by operating in interrupt mode 2. In this mode, a requesting peripheral generates an interrupt, and when that interrupt is acknowledged, the CPU will expect the interrupting peripheral to place an 8-bit address vector on the data lines. The CPU will add this 8-bit address to the contents of an internal 8-bit register to form a 16-bit absolute memory address. This address then points to a 2-byte location in memory, which contains the absolute address of the desired service routine. To ease software design, the interrupt enable function is controlled by the SEEK/RW signal from the floppy disk controller circuit. During data transfer to/from the disk drive, all interrupts other than the floppy controller are disabled. Teletek has also done some of the interrupt daisy-chaining by series connecting the Z80 peripheral ICs on the board, which makes life a little easier for the user.

Bringing the unit on-line is a veritable snap, even allowing for the user customizations available. The FDC-I needs only to be plugged into a standard S-100 bus to obtain the proper power and ground connections. It is not even necessary to provide signal terminations. The terminal is connected normally to SIO-A, which is the primary port, using a 16-pin flat cable connector. Using the standard monitor software supplied, SIO-A can determine the baud rate used by the terminal through the transmission of successive carriage returns. The full set of handshake lines must be connected and functioning before this serial port will become operational. Also the correct data transfer protocol (number of start bits, number of stop bits, parity, etc.) must be correct before the terminal will function.

In my case, the terminal required two stop bits for any baud rate above 110, and the FDC-I only provided a single stop bit at all baud rates. A call to Teletek was answered very promptly, and we were provided with the necessary changes to the monitor program to provide the needed extra stop bit. It was then a simple matter to use the on-board EPROM programmer to change the monitor (the terminal was operating at 110 baud, of course, for the modification, and my lab does have a 25.5 volt supply available) and we were up and running at 9600 baud.

### Easy configurations possible

The floppy disk controller and drive were just as easily configured, requiring only the selection of the appropriate value of pre-write compensation, and the addition of a capacitor to extend the drive head load time. Two values of pre-write compensation are provided, 250 nS—standard and 125 nS—optional. These are the values for the 8-in. drives. When using 5¼-in. drives, the pre-write compensation is doubled.

Pre-write compensation is particularly important when using double density recording, as it is necessary to compensate for the timing shifts produced by certain configurations of the magnetic flux patterns recorded on the disk. The unit includes the provision for extending the head load time from the nominal value of 240 mS up to 11.3 seconds by the addition of an extra capacitor. In some applications, the nominal value of 240 mS will cause an undue amount of head action with the undesirable effects of increased wear to the drive and increased damage to the disk media. I chose to add a 110 ufd capacitor, which increased the time to approximately 5 seconds.

All of the above modifications (with the exception of the stop bit change) are fully detailed in the quite extensive manual provided with the board. The manual runs well over 75 pages and includes a full discussion of the operation of the board, the setup and configuration instructions, the full listing of the standard monitor and the data sheets for the NEC uPD765 floppy disk controller IC. Also included is a listing for a video utility package, a format program, and even a CP/M 1.4 BIOS. The only item missing from the manual is the board schematics; to obtain them, you must request them from Teletek and sign a non-disclosure agreement.

Putting aside a few minor quibbles, the Teletek FDC-I is one whale of a board, both in design criteria and in execution. In essence, an entire microcomputer is available for a reasonable price. □

# ANNOUNCING A REVOLUTION IN THE COST OF PROFESSIONAL SOFTWARE

VISACCOUNT is a fully integrated business and accounting system designed for use in small businesses. VISACCOUNT is extremely comprehensive and professional, yet it is very easy to use. The system is controlled from a series of interconnected menus permitting user-friendly operation. Everything you need to set-up and operate the system is provided with the VISACCOUNT package. Experts have estimated the development costs for a fully integrated software system ranges between \$7,200 and \$22,000.† When you buy software the developer has to recapture this expense. Computer Services Corporation of America is selling its software with a view that volume sales can almost negate this development cost.

**OUR GUARANTEE** — Buy both our software and that of our competitors (who will no doubt charge several times our price because they need to recapture their development cost). Compare the two systems and we know you'll return theirs (make sure they'll let you return their software). If you decide not to keep our system, then return it within 45 days for a full refund. Once you've used our system we're confident you'll be delighted.

†Microcomputers for Business, Applications, 1979.

## VISACCOUNT

### What You Receive

- Nine 5¼" double density disks (or six 8" single density disks)
- Easy-to-use operator's manual (over 200 pages)
- Self-study guide on bookkeeping and accounting (over 180 pages)
- Cassette based instruction program on set-up and operation

Available for Apple\*, TRS-80, and most others

\*The Apple version requires the Microsoft Z80 softcard.

CSCA has CBASIC2, CP/M and Microdot Z80 softcard in stock.

# CIS COBOL

Our CIS COBOL product family brings you the most successful business programming tool ever devised, COBOL, in a form optimized for today's most cost effective hardware, the microcomputer. Standard COBOL as defined by ANSI X3.23-1974.

The reliability and performance of CIS COBOL are strongly emphasized by its continued qualification for U.S. government contracts. In January 1981 CIS COBOL entered its 2nd year of G.S.A. certification.

CIS COBOL is powerful but simple to use. Its screenhandling, dynamic module loading and fast ISAM let you take full benefit from micro computer facilities.

Our FORMS-2 utility is a COBOL source code generator to help you build interactive applications with ease. Using our unique demonstration "How to create a COBOL program in 20 minutes", you can quickly try out new application ideas.

And if you are developing software for resale, the variety of systems running CIS COBOL offers you a very large available market.

WITH  
FORMS-2

CIS COBOL and FORMS-2 are available through our dealers and distributors for many 8080, Z80 and LSI-11 systems including Apple II with Softcard and CP/M.

For OEM purchase on 8086, PDP-11, TI990 and other order codes approach us direct. Our system transfer technology has made CIS COBOL first on a number of processors and enabled us to interface to 30 different operating systems.

For more information about CIS COBOL write or call us at our USA or European sales offices.

by Hillel Segal

The Digital Microsystems' DSC-2 gave a good overall performance in benchmark testing conducted by the Association of Computer Users.

A single-user CP/M-compatible computer, the unit is notable for its flexible and expandable disk storage system. While its performance seemed adequate, the system is being phased out of the company's product line in favor of a newer model, the DSC-3. It is also a single-user CP/M system, but (unlike the DSC-2) can be used in Digital Micro's Hinet communications networking system.

The Hinet is an RS-422 standard high-speed data link; as many as 250 devices can be attached. Using the company's newer products, the DSC-3 and multi-user DSC-4, a distributed processing system for larger offices can be put together.

Where does that leave the DSC-2? It is still being marketed, but only to those customers who already have existing systems. Others are steered to the newer products.

It is a fact of life in the computer industry that systems come and go. The pace of change in technology for small systems is incredibly fast, and vendors are hard put to keep their equipment up to date. So are users... and benchmark testers.

We ran into the same problem in testing the computers in series 2, which covers the \$15,000 to \$25,000 price range. We had no sooner published a report on the IBM 5110 when it was obsoleted by the 5120. By the end of the series, one of the manufacturers was out of business entirely, while another product was also discontinued.

If this causes a bit of teeth-gnashing for us, imagine the chagrin of a customer who wakes up to find that the computer he thought was the latest thing is now a has-been. The most we can hope for is that the vendor will continue supporting the software and hardware.

We are striving to keep the report series up to date by beginning a continuation series of reports covering the series 1 (under-\$15,000) and series 2 price ranges. Here we'll have a chance to cover some of the systems introduced since the original tests were run.

## NO "GLITCHES", SURGES OR INTERFERENCE

Clean power distribution for your:

- Microcomputer system
- Audio Visual system
- Lab instrumentation

Marway Products' new MPD 117 AC Power Controller upgrades a standard AC utility outlet into a convenient noise-free source of AC power. The MPD 117 features:

- High energy EMI filter
- Transient voltage suppressor
- 10 amp circuit breaker
- 6 switched outlets
- 2 direct (unswitched) outlets
- Illuminated "on/off" switch
- UL recognized components

At \$89.00 (plus tax and shipping) the MPD is the low-cost solution to your power distribution needs, and the best dollar value available in AC power distribution and noise suppression products.

Marway can solve your power distribution problems and save you money.

CIRCLE INQUIRY NO. 45

Let's look at the DSC-2's performance in comparison with the other systems in the original 12 tested for series 1. Configured with 64K bytes of memory and two double-density 8-in. floppy disks, a Hazeltine 1500 CRT and Texas Instruments model 810 printer, the unit sells for \$9,015.

In the accounts receivable test, a real-life program involving both computation and disk file access, the system finished in 3 minutes, 28.8 seconds. The time given here is the run-time; a separate compile step took about a minute, but would not affect on-the-job performance, since the compilation is done during program development rather than during actual use for the application.

The full Benchmark Reports also include times for Scientific/Engineering and New Product Planning simulations. Speed tests for math and disk access routines are also reported.

One feature of the hardware deserves special mention: the unusually flexible disk storage arrangement. The separate disk controller board in the main cabinet can drive from one to four floppies and can accommodate single or double density disks, either single-sided or double-sided. Using four double-sided double-density disks, 4M bytes of storage can be on-line.

For applications requiring more storage capacity, Shugart hard disk drives are available. Two sizes are offered: 13.7M-byte and 27.4M-byte. Both use a fixed disk and incorporate an intelligent disk controller with its own buffer area.

A head-per-track option is also offered for the hard-surface disk. Using this feature, eight fixed-position heads are added to the bottom surface of the disk drive. They provide a special high-speed disk access area, which reduces waiting time for frequently-accessed data.

Digital Microsystems sells its equipment through a network of dealers and OEMs rather than directly to the end user. While CP/M and Oasis operating systems are available for the equipment, no applications software is provided by the manufacturer. It's the responsibility of the dealer to provide either a stock or customized set of programs for customers to use.

While this type of arrangement between manufacturer, vendor and user is fairly common and can work well, it placed a greater burden on the local dealer to provide all the needed software, equipment service, training and after-sale support. Potential customers are advised to check the references of the dealer carefully. If the dealer should go out of business or discontinue the product line, the customer, lacking factory support as a backup, may be left in the cold. □

*Hillel Segal is president of the Association of Computer Users, a non-profit association with members all over the U.S., Canada and several foreign countries.*

*One of the association's key activities is the publication of its Benchmark Reports. Each month a new report is produced covering a computer system.*

*In addition, ACU publishes seven bimonthly newsletters for users of small computers, midi computers, large computers, time-sharing systems, distributed processing systems, word processing systems and home and hobbyist computers.*

*A complete package of information about membership is available at P.O. Box 9003, Boulder, CO 80301.*

# Standard & Poor's unique software and data system—STOCKPAK—can help you manage your investments like a Wall Street Professional! Now for TRS-80 Model I and Model III users too!

STOCKPAK not only delivers a "stand-alone" Portfolio Management System but also gives you the software for Standard & Poor's monthly Common Stock Data Service (available to TRS-80 owners on a subscription basis). With STOCKPAK and the Data Service you command one of the most powerful and versatile investment tools available.

## Here's How STOCKPAK Will Help You:

### A 900 COMPANY DATA BASE SERVICE

Monthly Data Service subscribers receive a diskette containing 30 vital financial items on 900 of the most widely traded stocks (S&P "500" and 400 NYSE, ASE and OTC issues). Accompanying this monthly diskette is an Investor's Newsletter highlighting important financial news and investment strategies, with suggestions for maximizing the usefulness of the system.

### STOCKPAK SELECTION SYSTEM

The heart of STOCKPAK is a powerful, analytical stock selection tool which enables investors to choose stocks which meet their investment criteria. For example, you may wish to select only those oil and gas stocks with price/earnings ratios of less than 7 and yields of 6% or more. Once a group of stocks has been selected, you can store it as a separate data file for continuing use.

### REPORT WRITER

You can define the report formats you would like to see on those stocks meeting your investment objectives. Hundreds of calculations and ratios that you define can be sorted, averaged or totalled, and displayed on video screen or optional printer.

### PORTFOLIO MANAGEMENT SYSTEM

Now you can effectively evaluate and manage your own stock portfolio of up to 100 securities with as many as 30 transactions for each. You can record "buy" and "sell" transactions, price and dividend information and stock splits for instant retrieval, for record keeping and tax purposes. You can measure actual performance or create hypothetical situations to help you make "buy" or "sell" decisions.

### HOW TO ORDER STOCKPAK

STOCKPAK is designed exclusively for TRS-80 users with 32K business systems with two mini-disk drives. You can obtain the basic software and sample Data Base, plus a comprehensive User's Manual from your local Radio Shack Store for only \$49.95. The STOCKPAK Monthly Data Updating Service can be ordered directly from Standard & Poor's for \$200 annually, or from the order form provided in the basic package you purchase from Radio Shack.

# The Osborne 1

by Carl Heintz

When the first product announcements for the Osborne 1 appeared, we took them with more than a few grains of salt. Quite frankly, we were skeptical that any company, particularly an upstart firm like Osborne Computers could possibly produce a *really* portable, complete computer. The product announcements proclaimed the new Osborne 1 as a breakthrough in technology and design; we had heard that all too many times.

Before we review the machine, it might be useful to restate some of the golden truths of microcomputing: at least an 8-in. monitor is required for any business application; the video screen must be at least 80 columns wide; at least 200K of disk are required for any substantial business application; the machine must be upwardly compatible; and applications programs are seldom sold as part of the computer.

The first observation about the Osborne 1 is that it breaks all the rules we formulated above. To add to this, it does it at a very low price of only \$1,795. We found nothing seriously wrong with the machine. It offers positive things—just like the software that comes standard with it.

The system is a complete, portable microcomputer that includes 64K RAM, a Z80 processor, two 100K (single density, single sided) disk drives and a 5-in. monitor, all in a plastic case with handle, ready to go anywhere the user needs computing power. The system includes a serial RS-232C port for a printer, an IEEE 488 port, a modem input, output for a separate 12-in. video monitor and provisions for a separate battery pack. The package comes complete with the following software: CP/M 2.2—operating system; MBasic5 and CBasic2—two basic language dialects; SuperCalc—a VisiCalc-type of electronic worksheet; Wordstar—word processing program by MicroPro; and Mailmerge—an extension of Wordstar that produces mailing lists, form letters, and helps in the creation of large documents.

The retail price includes all of the user software. Options include a separate 12-in. video monitor, a modem cable and acoustic coupler, a battery pack for up to five hours of operation, and upgrades on the disk drives up

to 200K each (total of 400K). The system, through the IEEE 488 bus, is compatible with a configuration for operating the Corvus hard disk.

The system is probably best compared to the TRS-80 model III or the Apple II in terms of size and capabilities. The incredible thing about the Osborne is that unlike either the Radio Shack or the Apple, it is truly portable and essentially self-contained.

The accompanying comparison table is by no means complete, since it does not address some of the major issues for a computer user, but it does offer a few insights. Take for example the issue of software. Both the TRS-80 III and the Apple use proprietary operating systems unique to their own machines. The Osborne system uses CP/M, which is the industry standard for business applications. The Osborne comes with two excellent sets of applications software, a word processing system and an "electronic worksheet." Neither the TRS-80 nor Apple include an applications software in their base price.

The Osborne 1 includes the capabilities for limited graphics on the terminal, which are comparable to the low level graphics of the TRS-80 III. There is no provision for sound or high resolution graphics, as in the Apple.

The most obvious question is whether the 5-in. monitor is sufficient. It appears very small in the photo, and not many users will want to have it very far from them. The screen is very clear, especially if the controls for contrast and brightness are adjusted well for the ambient light conditions. In most cases, the terminal should be adequate. However, if your eyes are weak, there is a distinct possibility that some of the letters may blur a bit and a comma may be indistinguishable from a period. The screen size is one of the big negatives of the system. To compensate for this, Osborne offers an outboard 12-in. monitor that is more than sufficient for all applications, although it does not fit in the case, making the computer less portable.

As mentioned earlier, the Osborne video monitor is basically a window that is 52 characters wide. Lines may be up to 128 characters long, and the user can scroll

back and forth to view any 52 characters. When using the word processing system (MicroPro's Wordstar), the monitor automatically scrolls over as you enter a line if it is longer than 52 characters. Under Basic, however, this does not occur, but one can scroll over. The software was set to "auto-return" (word-wrap) at 64 characters wide, so the user normally does not see the whole line. It's not easy to review text that way, but it is adequate. Another disadvantage to the 52 limit occurs when the user looks at the menus for the word processor—only the first 52 characters appear. In actual usage, however, these are only minor irritations that the user quickly realizes are necessary in order to achieve total portability.

The second major question that most potential purchasers will probably have is whether the disk storage is adequate. That is a legitimate concern, since with the CP/M system in a minimum configuration with the applications program, the user is likely to have less than 120K of storage space left over for data files between the two disks. Unlike other systems, such as the TRS-80 III and the Apple, there are no provisions for more than two disk drives, although a hard disk can reportedly be added through the IEEE 488 bus. This should generally be sufficient for word processing—except those applications such as book writing, where several disks will be required. In many financial applications, however, the limitations imposed by the disks may require an upgrade to the 200K disks offered as an option. The disk speed is not overwhelming, but it is adequate and fast enough for most applications. (Wordstar, for example, uses a number of overlays from the disk. While disk access slows down the system, it's not annoying.)

The final major question that a potential user is likely to raise is the matter of how well the machine is constructed. At the extremely low price of less than \$1,800, one wonders whether the machine has some built-in engineering shortcuts that could cause problems later. In our test machine, we noted that there is no fan, nor are there any ventilation holes, other than on the front cover. This means that the computer case gets a bit warm. The problem is largely solved, however, by propping the computer up so that the heat vents out the hole in the front. We propped it up on the keyboard unit, a move that solved two problems—the screen was closer and the heat was reduced significantly.

### Power supply shortcut

The only obvious engineering shortcut is in the power supply. Anyone who has used a TRS-80 model I knows that when the disk drives click on, there's generally a very small flutter in the video monitor. This same malady sometimes exists with the Osborne 1, only to a lesser extent. The problem is not even minor, except for the engineering purist.

Frankly, there will be some potential buyers who are unimpressed with the physical construction of the unit. While sturdy and fully functional, the unit reviewed had a vacuum formed plastic case and front panel—not the neat injected molded plastic that the Apple and the TRS-80 III use. The company claims, however, that a molded plastic case will soon be standard.

The manual for the computer was obviously written for someone who had not owned a computer before. It leads the user very carefully through the set-up and

use of the machine from unpacking to setting up and running the programs. The manual even contains an overview of the Wordstar, SuperCalc, Mailmerge, CP/M, MBasic and CBasic 2 programs that are supplied. For the novice user, the manual is excellent.

It contains very little about the physical aspects of the machine, other than how to set it up. There is no circuit diagram, nor is there any trouble-shooting guide. Further, there is no discussion of the monitor program, although there is an assembly programmers guide, which gives some elementary information necessary to interface the machine with the outside world, particularly through the IEEE 488 bus. This level of documentation is consistent with the intended users of the machine—businessmen who don't know and don't care about the details of its inner workings.

The software provided with the machine is impressive: if one adds up the list price of all the software provided, it appears that the hardware itself costs slightly more

	Osborne 1	Apple II	TRS-80 III
Memory available	64K	64K (opt)	48K
Disk capacity	2 @ 100K	2 @ 104 (opt)	2 @ 178
Monitor	5-in. across 52 character 24 lines	optional 40 character 24 lines	8-in. 64 character 14 lines
Upper/Lower case	yes	no	yes
Numeric keypad	yes	optional	yes
Standard typewriter keyboard	yes	no	yes
Serial Terminal port	yes	optional	yes
Systems clock	yes	optional	yes
Price	\$1,795	\$2,500 (with monitor)	\$2,500

**Comparison of features**

than \$400. Wordstar and Mailmerge are outstanding word processing programs—by one of the best vendors in the business—MicroPro International. SuperCalc is, in essence, a VisiCalc-type program that runs on CP/M. MBasic and/or CBasic 2 are necessary for almost any applications program—it is significant that both of them are included as standard with the machine.

There are a few bugs in the way the system interacts with some of the software, and the company has fixed a number of the early problems. However, none of the bugs that we became aware of were any more than slightly annoying. None of them degraded the machine's performance. The company is very concerned about fixing bugs and updating the units already in the field.

To test the speed of the system, we ran the Prime Number Cruncher benchmark (IA Aug 81). The speed of the Osborne was not lightning: it took 14 minutes and 25 seconds to complete the task of finding all the primes under 1,000.

For value received, the system represents an outstanding buy. It's a great little machine for the businessman who wants to "take it with him" in the field, and it should find good application as a versatile business tool to perform routine word processing, financial analysis, and limited applications programming. □

CIRCLE INQUIRY NO. 2

---

---

# DEDICATED WORD PROCESSORS VS. MICRO-BASED SYSTEMS

by Dennis Christopher

Why would a business choose to purchase a \$12,000 microcomputer when a \$4,500 model will do the same job? That question will be asked with greater frequency in the future, as word processors threaten to eliminate the unintelligent typewriter in all but the smallest offices. Microcomputer manufacturers such as Tandy, Apple and Commodore find themselves competing with the giants of the office equipment industry.

For the medium to small-sized users, the choice between a top-end \$12,000 dedicated word processing machine and a more flexible microcomputer at half to a third that price can be a difficult one. Cost is not the only factor. When applied properly to a business environment, the productivity and time savings offered by word processing make the \$7,500 maximum price differential between two popular systems seem inconsequential. When the smaller spread between the latest dedicated systems is compared to micro equipment, the cost comparison dwindles further.

I've had extensive experience with both microcomputer and dedicated word processing machines. For eight months, I wrote approximately 2,000 words per day using a TRS-80 model I and Scripsit. I demonstrated the system to my partners, and after appropriate comparison studies, we elected to invest in three Xerox 860 dedicated word processing machines. I used my terminal exclusively for six months, but have recently resumed using the TRS-80 for certain applications. Most businesses must consider just how they will be using equipment before deciding whether they will best be served by a microcomputer or a dedicated word processor.

WP terminals were designed especially for that task; most microcomputers were not. Many micros lack certain hardware features considered essential for word processing.

These can be as basic as the lack of an 80-character display line on the CRT, or absence of built-in lower-case. Some micros don't have a control key, and must have one added by hardware or software means in order to invoke frequently used word processing commands. Software written to compensate for these shortcomings in design is often needlessly complex. It may be necessary for the operator to enter EDIT mode, COMMAND mode or CREATE mode in order to perform certain tasks that can be initiated by striking a single key on a dedicated unit.

Some design faults cannot be overcome by hardware or software patches. I find composing text on a 64-character display much more difficult than on an 80-character screen, which is designed to show a full page of text exactly as it will appear on paper. Yet, there is no simple way to add an 80-character CRT to the TRS-80 model I that I use with Scripsit. Such limitations have to be accepted if one chooses that micro over a WP terminal.

Dedicated units are built with high resolution screens that can display a full or partial page of text. Status lines that present useful information are often presented in reverse-video to clearly differentiate between text and extraneous material. The user can often toggle back and forth between black-on-white and white-on-black display at will.

Some micros also have these capabilities to a certain extent, but dedicated units generally have thousands of hours of human factors research behind them. Instead

of a single control key, WP terminals have an array of special function keys, which can command the system to store, insert, move or copy text at a single stroke. These keys are laid out to fall easily under the finger. While some micros have some of these advanced design features, I know of none that have them all. Each lends itself to improving productivity, reducing operator fatigue and making the system easier to use.

Higher cost terminals may have gold plated PC card contacts where a micro has oxidation-prone solder runs. Both my Xerox 860 and my TRS-80 are located in the same basement office, which tends to be rather humid in the summer. It's been necessary to carefully scrub PC card contacts with an eraser every few days to keep the Radio Shack computer operating. The dedicated terminal's gold-plated edge cards require no attention whatsoever. The more sophisticated design and construction made possible by the higher price of the WP unit can result in a heavier-duty unit that can withstand abuse and lack of maintenance.

### **Configurations are flexible**

Micros deserve a few points in the plus column for design features. Users of these units, unlike operators of dedicated word processing devices, are not locked into the configurations the factories mandate. Suppliers other than the original manufacturer offer improvements that may enable a business to tailor its WP equipment to suit some fairly unusual needs. If color graphics are needed for some reason (doubtful for most word processing applications), a computer can be chosen with that capability. Some micros can be outfitted with up to eight different disk drives, or set up to dump text files to cassette tape for portable operation.

Most custom modifications to micro systems are simple plug-in changes. Others require some knowledge of digital electronics. In either case, the average user should be able to find a local dealer who can modify a micro to suit any particular application. Though the S-100 modular computer has fallen from favor somewhat since such systems as Radio Shack, Apple and Atari became available, there is still a network of business computer shops with the knowhow and inclination to configure custom systems.

Dedicated word processors, on the other hand, are turnkey systems that few users or dealers are equipped to fool around with. It's wise to plan a business' activities only on the features already available and implemented in a given piece of equipment. My company waited six months for the promised telecommunications capability that would link all of our offices.

Though the support and implementation of that capability provided by Xerox was superb, the delay derailed our plans somewhat. A good rule to remember: the WP system that the sales person shows you is the one you get. Never mind what future capabilities, enhancements and plans are slated. All those plans could be supplanted by a newer model from the manufacturer, not 100% compatible with the old one. If you count only on the features demonstrated before the purchase, you will lessen your chances of being disappointed.

Whether contemplating micro based or dedicated WP equipment, the design of the machine should be considered in light of a business' need before a specific word processing system is chosen. Some may prefer the sophisticated features of the terminals. A business

with a high volume output can find that operator productivity on the best-designed machines can have a measurable impact on a company or division's profits. Others may wish to save money with a micro now and upgrade at some later date.

Getting a microcomputer word processing system repaired tends to be somewhat inconvenient, but fairly inexpensive. Frequently, it's just a matter of unplugging the equipment and taking it down to the local computer store. Repairs may take from a few hours to a week, and are modest in price, considering the price of the equipment. Radio Shack, for example, offers reasonable, fixed fees for repairing most pieces of equipment that have not been modified by the user.

A WP terminal is usually much simpler to have fixed. A technician will be at your office in a few hours and repair the equipment on the spot—even if an entire PC board has to be replaced. One vexing problem I had with my own dedicated WP machine required a new PC

---

## **Microcomputers provide good portable word processing capabilities.**

---

card that wasn't stocked by our local office. The technician had it flown in from the nearest warehouse, and my machine was working the next business day.

Problems resulting in downtime measured in days are relatively rare. If there is no backup terminal available (which may be the case both with dedicated and micro-based units), the working time lost due to maintenance is likely to be minimal. These potential savings in time have to be weighed against the cost of service for WP terminals.

Service contracts can cost several hundred dollars per month for a single terminal. Time-and-materials billings can mount quickly. In many businesses, a lost hour can easily cost a company much more than the price of maintaining a dedicated terminal. Other businesses have cost-justified their word processing equipment on a much slimmer margin. Those with lower overhead may want to give more weight to the cart-it-yourself service available for micro-based systems.

Most dedicated units aren't portable—it's enough of a chore to wheel them from one location to another in the same office. Microcomputer systems, on the other hand, can be toted wherever the user needs to employ the device. If the printer is left behind, a microcomputer CPU, disk drives and CRT can be taken on the road easily and used in a motel room. Carried by car or onboard an airplane, such systems provide a fairly portable word processing capability to traveling executives, writers and others. Linked to their offices by modems, these units make it possible to establish an office anywhere the user roams.

Those with an investment in WP terminals aren't totally left behind in portability, however. There are several portable terminals that can be carried on trips and used to interface with the larger, less-wieldy equipment back at the office. Sony's Typecorder is the smallest of these. The future should see a veritable flood of these devices. However, all require an additional investment that can amount to nearly as much as a micro user will pay for his entire system, less printer. A microcomputer is portable; a dedicated word processing terminal can be made to work with an additional input device that is also portable. The distinction can cost those with tight budgets several thousand dollars.

Those using a dedicated machine are locked into the software provided by the manufacturer. Some units cannot function as anything other than a word processor. Others can be used as computers when supplied with a Basic interpreter or some other language that allows program creation and editing. Even so configured, a WP terminal is not likely to be as flexible a computing machine as a microcomputer. Basic design comes into play again: WP terminals, for example, usually don't have a calculator-style numeric keypad, which makes entering numbers fast. Try posting several hours of general ledger entries using the top line of your word processing terminal to see what I mean.

Those who own one of the popular units like the Apple or TRS-80 have available a wealth of software, produced by the manufacturer and independent suppliers. While a general ledger package may be available for a given dedicated system, any micro worth its salt has hundreds of such programs accessible to the user. The major manufacturers have given a nod of acknowledgement to this reality by their introduction of the personal-sized equipment, such as the Xerox 820, which can use any CP/M programming with its Z-80 processor. That particular unit should be lumped in with the other micro-based systems in any study, despite its pedigree origin.

Micro users gain much flexibility from the broad range of software available. They may even choose from a wide variety of word processing programs to meet nearly any need.

While dedicated WP terminals tend to be very operator-oriented, and feature-laden, a specific user may find that a machine doesn't really suit his needs. A business may grow into new areas requiring different capabilities. Writers, for example, because they create the copy as it is input, have different work habits than typists who are entering text from hand-written notes, tape recorded dictation or typed originals. The latter may prefer to use a word processor that "enlarges" the current character or line being input, so the typist's place may be easily found when glancing back and forth from original copy to the CRT screen. A writer may find this distracting. A unit that did not allow turning this feature on and off would be maddening.

One who must rely on the manufacturer for programming has to wait until a needed feature is introduced for his specific machine. Hardware enhancements are relatively rare for dedicated units. Such advances usually mandate a new model. Software improvements, while more frequent, must benefit a large number of users before they are implemented.

So, the user of a dedicated machine is fairly well locked in. A TRS-80 owner who must have a feature—embedded control codes, for example—can drop one

# Strictly Business

If you've ever missed a deadline, forgotten an appointment, waited on late deliveries or lost track of projects, put ANGEL to work for you.

ANGEL is the new software program for microcomputers that helps organize and manage your business flow. It's strictly business.

## FAST AND EASY

With a series of simple one-line entries, ANGEL can schedule every phase of your projects and appointments, however simple or complex. Then, each day, ANGEL will give you a run-down of every action that needs to be taken to complete all your work on time, whether it's due tomorrow or ten years from now.

ANGEL's large capacity allows you to log and track up to 2,000 individual projects at once. With ANGEL's help, you can eliminate reams of files and hours upon hours of costly business delays and missed deadlines.

## SPEAKS SIMPLE ENGLISH

ANGEL speaks plain English. No computer language to memorize, no codes to decipher. Sit down and talk to it, face-to-face. If ANGEL doesn't understand, it will respond in plain English. If you make a program error, ANGEL tells you how to correct your mistake through the use of a built-in video manual. ANGEL is so easy to use, you can turn it on and enter 30 items in less than five minutes.

## WORKS FOR ANY BUSINESS

You can custom-program ANGEL for any business operation — from oil

exploration to insurance, home construction to retail sales.

With a memory capacity that's limited only by the capacity of your disk storage, ANGEL tracks multiple projects for busy executives. The disk comes with an easy-to-understand printed manual, to back up the built-in set of instructions of the program itself.

In addition, a data-proof safeguard system will not let you accidentally erase entries, and a special password code of your choice allows you to keep confidential files.

Put ANGEL to work for you today. You'll never lose track of your work flow again.

ANGEL is recommended for use with any disk-based system that has 48k memory or more. It will operate with any CP/M\*-based system and the TRS 80\*\* (Model I, II or III). The

program comes on standard 5¼- or 8-inch disk, with storage sleeve. Now only \$295.

ANGEL is available only through Time Management Software. It is not sold through any outlets at any price. Order the complete program for better business by calling one of our toll-free numbers or by returning the order blank below.

Call now toll-free to order (Ask for operator 602)

**1-800-824-7888** (nationwide, except California, Alaska and Hawaii)

**1-800-852-7777** (in California)

**1-800-824-7919** (in Alaska and Hawaii)

Yes... I need ANGEL to work for me, to organize my business with ultimate ease and efficiency.

word processing program and find another by a different software house that provides the needed capability. Other micro users may be able to write patches and drivers themselves.

Esoteric factors enter into the decision for some businesses. Our company intended to link all our offices through telecommunications. Articles, reports, assignment data and other information is transmitted regularly. Of course, we could have linked microcomputers exactly as we have tied together our dedicated WP terminals. However, most of our clients use one of the latter, and it is currently far easier to communicate between like machines than from micro to WP terminal. Software to translate the control codes from one system to the other is more readily available for the major systems.

This situation is changing constantly, but at the time we purchased our equipment, the very important communications factor weighed on our decision. Communications support for the system we chose was promised, and was working within a mere half-year.

Things as minor as the amount of noise produced or the amount of time needed to load the word processing software may enter into a decision.

The very heavy user of word processing equipment may decide that the typical price differential of \$7,500 is very small. Marginal users may find it overwhelming. For some, even the difference between a minimal several thousand dollar micro system (with Selectric terminal, or dot matrix printer), and the low-end dedicated systems at \$6,000-\$7000 can be imposing.

Consider also that some candidates for word processing may already have a microcomputer installed

and working for accounts payable/receivable/general ledger or inventory. If free time is available on the machine, the actual startup cost of such a WP system may be as low as a few hundred dollars for software, or as high as the cost of a daisy wheel printer. In either case, it is likely to be \$5,000-\$10,000 less than a complete dedicated system.

Look at the business that needs a word processing system for some work and a small computer for other jobs—but has neither. It can obtain both machines for a single \$5,000 investment, instead of purchasing a \$7,000-\$12,000 WP terminal and a \$12,000 computer (which may be overkill for a user small enough to get by happily with a \$5,000 micro). Even if the word processing device can be adapted for computer operation, software may not be as widely available as for a micro.

Even this cursory examination of some of the factors involved in the choice reveals that each option may be suited for some users, while the other will be ideal for a different type of application.

The wide availability of micro word processors has not seemed to erode the sales of WP terminals in the least. Each has found its own market, with a predictable amount of overlap. The microcomputer, because of its low cost, has largely made its own market, bringing word processing power to those who could never afford such capabilities before.

In the 1980s, both types of systems will continue to thrive as prices drop further at the high and low ends. Innovations like the Sony Typecorder bring us closer to the time when the electric typewriter as we know it will become a rarely-used relic. □

### Micro Word Processing vs. Dedicated Units A comparison of two typical configurations

	Xerox 860 Partial Page	Radio Shack TRS-80 model III
<b>Printer</b>	45 cps Diablo	25 cps daisy wheel
<b>Display</b>	Half-page, 90 + characters Reverse video built-in	Partial page, 64 characters wide White on black only, unless user modifies
<b>Disk</b>	Two 8-in. single sided, single density included. Can expand to four drives, double density or hard disk from Xerox.	Cost calculated on two 5¼-in. single sided, double density disks. Can expand to four drives, and/or to 8-in. or hard disk through aftermarket accessories.
<b>Software</b>	Xerox word processing software provided; enhancements at no cost. Sophisticated features include merging mailing lists, while printing, columnation.  Basic interpreter available (\$800); Xerox also has flexible records processing package that might be compared with VisiCalc.	Scriptit, wide variety of WP software available at \$79 and up. Many have features necessary for doing mailing lists and other tasks.  Basic standard. Fortran, Pascal, other high level languages, as well as assembler Basic compiler, etc. available. Large number of business, personal and game programs marketed at very low cost.
<b>Service</b>	Through Xerox service offices only. Service contract, or by time and materials. More costly than micro service, but extremely fast.	From Radio Shack and many others. User may have ability to do own work. Otherwise carry-in or mail-in service, slower, but less expensive.
<b>Training</b>	Provided by manufacturer, no additional cost.	Up to user, tapes, other aids available.
<b>Cost</b>	Less than \$10,000 with lower speed printer and no cursor control pad.	Less than \$4,500 with two disk drives, and daisy wheel printer.

# the supreme command

## We're Offering You Our Company Secret.

It's a brand new American-designed program generator that can eliminate the need to spend thousands of dollars on specialty programs.

## And, It's Available Today.

It's the microcomputer program that Time Management Software is using to write its own professional software packages. And now, you can use it to write all the programs you'll ever need. We call it **GENESIS**. You'll call it incredible, because we have yet to find a program on the market that GENESIS can't create.

GENESIS is the next generation. Designed by a team of doctoral-level programmers, GENESIS runs on all CP/M\* 2.XX systems, using compiled PL/1-80\*.

The code generated by GENESIS is fast and efficient, and this new product's capacity to code difficult algorithms is virtually unlimited.

The speed of code generation itself is literally awesome. Preliminary tests have indicated an ability to generate efficient code at a rate well in excess of four lines per second. Clearly, GENESIS can write months of code in a matter of minutes.

## With You As Architect, Genesis Is The Ultimate Master Builder.

Word processing, accounting procedures, statistical analysis, time management studies... GENESIS can write any functions you could possibly need. Naturally, complete program changes are quickly and easily made.

You speak plain American English to GENESIS — no code, no difficult introductory language to memorize. The only time you spend with GENESIS is in deciding the specifications of your program.

## Simply Stated, Genesis Is The Best Microcomputer Program Generator In The World. Period.

Genesis comes with on-line documentation, as well as a complete concise printed manual, written by a professional manual writer.

Due to its sophistication, we recommend this program for use with any disk system with 48k or more, using CP/M\* 2.XX. The code which is generated is CBASIC\*.

(Note: Even though GENESIS runs in compiled PL/1-80\* it is not necessary to have PL/1-80\* in order to run the program.)

The program comes on standard 5¼- or 8-inch disk, with storage sleeve. The program that will allow maximum use of your hardware... an introductory price of \$500.

GENESIS is available now directly from Time Management Software, and is

not sold through any other outlet. Time Management Software will send free updates of new material and products to GENESIS owners as they develop, to make sure you've got everything you need.

Order the most advanced program generator system on the market today, by calling one of the toll-free numbers or by returning the order blank below.

Call now toll-free to order. (Ask for operator 603.)

# Choosing Your Printer Hardware

by Larry C. Raymond  
and Jacqueline M. Raymond

Of all the peripherals associated with a computer system, the printer is often the major focus of attention. Much is expected of this device—it is the hardest worked and sometimes the most expensive component. One of the primary functions of electronic data processing is to produce reports. Whether the installation is oriented towards business, science or accounting, the production and printing of hard copy reports is necessary for success in today's business world.

As the demand for quality printers has increased, the printer industry has made great strides through circuit development. The technology of microelectronics has given the manufacturers a remarkable boost. Faster printing speeds, lower energy consumption, less maintenance, more reliability and greater affordability are a few of the results. Technology is now moving toward increasing the density of logic devices per circuit; as the density increases, the cost decreases. As a result, a small business can usually find a fast, reliable, versatile printer suited to its applications.

There are two major types of printers, character and line varieties. Line printers are capable of producing hard copy at a very high speed. They generally offer a

wide variety of print types, and are comparatively expensive. To remain within a budget, it is often necessary for the smaller business to sacrifice some of the speed and purchase a character printer. Character printers are available in a wide price range.

Character printers function either by the full-form method of printing the complete, solid character, or the dot matrix way of forming the character from a grid of dots. Full-formed character printers are the traditional standard for letter quality applications; e.g., business correspondence, word processing, etc. Dot matrix is a newer technology. This type of printer is faster, less costly and more versatile than full-formed, but is often far from letter quality. One development direction is toward more solid appearing characters—the more pins that go to form the matrix, the more dense the printed character appears. Multiple pass is another method used to approach letter quality results. As many as three passes of the printhead may be made over the same characters, and in some cases the printhead is shifted slightly with each pass to help fill in the character.

Increased printer buffer areas and printer intelligence make the newer printers capable of handling more data

faster. Dot matrix adds the capacities of varying size, script and character set, of utilizing a graphics mode, and of ease of printhead maintenance and interchangeability.

Character printers that can interface with small systems are available from over a hundred manufacturers. The accompanying table will focus upon the diverse technologies available in current products, in order to make a feature-by-feature comparison.

They are intended to present a cross-section of the more affordable printers available. The information given was provided by an overwhelming response to request letters we sent out. If some piece of data was unavailable on a particular printer, it is indicated as "N/D" (no data). Following are descriptions of the column headings.

*Physical specs* gives the height, width and depth of the printer, as well as its weight.

*Classification* indicates whether it is a line or character printer.

*Type* refers to how the character is graphically produced; whether it is full-formed printing or dot matrix printing.

*Method* distinguishes between the different methods

of transferring the character onto the paper. Primarily, we will discuss thermal and impact printers; other methods include ink jet and laser printing.

*Character set* tells how many characters are available to the printer to print, as determined by the firmware of dot matrix and the print element of full-formed printers.

*Expanded and Compressed Font* is an attribute that only a dot matrix printer might possess. It is the ability to print an elongated or a shortened version of a member of the printer's character set.

*Handling Method* is the mechanical method or device used to feed the paper past the printing component.

*Paper Type Used* indicates the type of paper needed to work in conjunction with the printer's handling method, i.e. fan-fold (single or multi-part), roll or single sheet.

*Interface Type* distinguishes between parallel and serial data transmission. A system with parallel interfacing can transmit data (one bit at a time) across eight or ten wires, whereas serial transmission can send single bits across only one wire.

*Interface Speed* describes the rate at which the printer is able to receive data.

*Price* lists the manufacturer's suggested retail prices. □

**Table follows**

# Printer Features and Specifications

Printer Features and Specifications				Specifications					
Manufacturer Name/Address	Model	Physical Specs (in.) (h x w x d)	Classification	Type	Method	Speed (cps)*	Character Set	Characters per Line	Lines per Inch

# Micros Approach Mini Capability: Bridging the Gap

by Terry Benson, Tom Fox  
and Ralf Korbner

This comparison originally started as an evaluation of minicomputers, but our investigation revealed that many microcomputers have approached—and in some cases exceeded—the capabilities of some minis.

For the purposes of this comparison, we defined *high capability* micros as computer systems aimed primarily at small business applications that incorporate a microprocessor chip or chips. To be included here, the microprocessor had to offer either 16 bits, or two or more 8-bit microprocessors had to be connected in a multiprocessor environment. Nearly all of the systems will support multiple users operating simultaneously. The accompanying charts provide the pertinent specifications. Some systems are produced by manufacturers that have offered microcomputer products in the past, and other by traditional minicomputer and large scale/mainframe manufacturers.

It appears that the goal of these companies is to provide a high capability system at a low cost. While some of the companies even estimate a sales dollar range that would justify their particular product, it is up to the user to evaluate the system capabilities and his own business requirements to determine which business system would be most appropriate. Since prices range from about \$5,000-23,000 for minimum systems and up to as much as \$120,000 for a full system, it becomes very important to evaluate *all* parameters.

While several significant parameters should be evaluated for any system, there are two specific ones that should be considered when evaluating the high-capability systems. First is the number of terminals or users that can be accommodated, either through the basic system or with the capability to add additional users in the future. The second consideration is the amount of data storage that can be provided. In many cases, the high capability storage provided with either Winchester or cartridge disks is optional, but at least you will know that the capability exists in the future to accommodate your business growth requirements.

While most of the systems include the Basic language as a standard part of the package, some offer higher performance languages as an option and most provide optional software for several popular languages. In addition to software language capability, many manufacturers are or will be offering application packages to support the small business user. Some software houses not necessarily affiliated with the manufacturers will also be providing application packages and languages compatible with some of the more standard microprocessor devices and operating systems.

While every attempt was made to include all manufacturers that are using the popular 16-bit microprocessors (Intel 8086, Zilog Z-8000, Motorola 68000 and TI 9900), we probably missed a few systems. While the information is as accurate as we could ascertain, there may be some final questions that will need to be answered by the manufacturer.

The following summaries are included as an aid in reading the charts and to provide additional information that may not be apparent in the tables.

As in our past comparisons, we checked with each manufacturer to get the most recent information and to verify the characteristics of each system. In many cases, a particular feature or option was not available (n/a) directly from the manufacturer, although it is often available from outside sources.

### **Alpha Micro's AM-1021**

We begin with one of the pioneers in the super micro class. Since 1977, Alpha Micro has produced a host of variations on a unique theme that marries the S-100 bus with a powerful 16-bit microprocessor that is a close cousin to Digital Equipment Corporation's LSI-11 chip set. Although more commonly seen as equipped with an entourage of 10- or 90-Mbyte cartridge-style hard disk drives, this month's charts describe Alpha's newest system—an 8.5M-byte Winchester hard disk model. A single double-density, double-sided floppy disk drive is provided for making data backups.

Although the modest accessing speed limits practical usage to three simultaneous users, the system is built of the same processing hardware and operating system that is ultimately able to support up to 24 terminals, including a number of printers.

Avid Alpha advocates point to the rich multi-user operating system as being this computer's most endearing feature. In addition, the system is equipped with a variety of languages (including a semi-compiling Basic and Pascal) that are uniquely suited for business applications. Applications software includes the big five: accounts payable, accounts receivable, payroll, order entry/inventory control and general ledger. In addition, Alpha's growing network of retail dealers has developed a variety of special-purpose packages for specific industries.

### **Convergent Technologies' CT-2200**

This system is distinctive because of its radically different design and its manufacturer's pronounced attention to production quality and customer support.

The system itself is nearly unrecognizable as a computer. The basic unit consists of five distinct boxes connected together by cables or articulated swivel joints. There is a detachable keyboard with a generous length of cord that disappears into a thin table-mounted plastic slab. On top of this are the major elements of the computer: a CRT display terminal on the left and what looks like a matching vertical copy stand on the right. A slim vertical stand on the floor completes the equipment list; it contains the disk drives, power supplies and electronics.

The CTOS operating system ranks with the most sophisticated available. It is designed to be modular; a given implementation may use only that portion of its capabilities that are meaningful in a particular instance.

A set of programming tools for assembly-language programmers is included, featuring editor, assembler and linker programs.

The stand-alone system is priced at \$20,000, including 256K bytes of RAM, a 10M-byte Winchester disk drive and 500K-byte floppy disk drive for backup purposes.

### **Data General's Enterprise 1000**

The Enterprise 1000 marks a change in direction for Data General Corp., which has been producing minicomputers for over a decade. Although the company has offered a microprocessor—the Micro Nova—for several years, this is the first system that is really intended for the small user.

The unit is an integrated system that will be offered through independent office product dealers. There are 64K bytes of user memory *plus* an extra 4K by 12 block of RAM dedicated to the screen. The 150 cps printer,

included with the system, offers bidirectional printing with a 9 by 9 dot matrix. The diskette capacity is fixed at 716K bytes.

Enterprise/OS is the operating system specifically written for this system, but said to be compatible with other Data General systems. This should make it easier to operate the existing volumes of software for the Nova computers. Basic is standard with the Enterprise 1000, but there is an optional Business Basic package available for \$300. The only application packages presently available are accounts receivable and inventory control at \$1,000 each.

#### **Hewlett-Packard's HP9826A**

Although not designed as a general purpose small business computer, the 9826A has many of the capabilities of any of the other systems reviewed. We could safely say that the 9826A is aimed at the engineer who wants a desk top computer—and many of the small business computers are ending up in that same spot. Another reason to justify the inclusion of the 9826A is that it is the only system in our comparison that uses the Motorola 68000.

The 9826A is truly a stand-alone unit with no mass storage peripherals offered—although an external pair of floppies can be added when using the HPL operating system. The integrated screen, although smaller than most terminals, provides easily readable characters and a complete graphics capability.

Since the system is directed at the instrument control market, an integrated IEEE-488 bus provides a convenient method of interfacing to

external equipment. Up to four additional I/O cards can be added to the system, or without any additional I/O, an unheard-of ½ Mbyte of RAM can be added to the system.

The user can select either Basic or HPL when ordering the system and application software packages can be translated from previous models. The company expects VisiCalc availability in the near future.

#### **Intertec Data's CompuStar**

The CompuStar is probably the least expensive starter system with the potential for operating in one of the most powerful multiuser systems. While the terminal (called a Video Processing Unit—VPU) is not based on a 16-bit microprocessor, it does use two Z80s within each VPU. In fact, you may even recognize the VPU as looking much like Intertec Data Systems' SuperBrain (IA Jun 80).

The low cost (\$3,995) of the stand-alone terminal (model 20 VPU) with integrated dual floppies makes this attractive for any small business considering a computer system. Using the "shared resource"

scheme of networking, up to 255 users can share a common disk device and data bases. Individual VPUs without integral floppies are also available as the model 10 VPU at \$2,495. With any of the VPUs, programs can be downloaded from the disk device with a minimum of 10 Mbytes at \$4,995.

Software support is very extensive, largely due to the CP/M operating system. There is also a utility

## Turn your Apple into the world's most versatile personal computer.

**The SoftCard™ Solution.** SoftCard turns your Apple into two computers. A Z-80 and a 6502. By adding a Z-80 microprocessor and CP/M to your Apple, SoftCard turns your Apple into a CP/M based machine. That means you can access the single largest body of microcomputer software in existence. Two computers in one. And, the advantages of both.

**Plug and go.** The SoftCard system starts with a Z-80 based circuit card. Just plug it into any slot (except 0) of your Apple. No modifications required. SoftCard supports most of your Apple peripherals, and, in 6502-mode, your Apple is still your Apple.

**CP/M for your Apple.** You get CP/M on disk with the SoftCard package. It's a powerful and simple-to-use operating system. It supports more software than any other microcomputer operating system. And that's the key to the versatility of the SoftCard/Apple.

**BASIC included.** A powerful tool, BASIC-80 is included in the SoftCard package. Running under CP/M, ANSI Standard BASIC-80 is the most powerful microcomputer BASIC available. It includes extensive disk I/O statements, error trapping, integer variables, 16-digit precision, extensive EDIT commands and string functions, high and low-res Apple graphics, PRINT USING, CHAIN and COMMON, plus many additional commands. And, it's a BASIC you can compile with Microsoft's BASIC Compiler.

**More languages.** With SoftCard and CP/M, you can add Microsoft's ANSI Standard COBOL, and FORTRAN, or

Basic Compiler and Assembly Language Development System. All, more powerful tools for your Apple.

**Seeing is believing.** See the SoftCard in operation at your Microsoft or Apple dealer. We think you'll agree that the SoftCard turns your Apple into the world's most versatile personal computer.

**Complete information?** It's at your dealer's now. Or, we'll send it to you and include a dealer list. Write us. Call us. Or, circle the reader service card number below.

SoftCard is a trademark of Microsoft. Apple II and Apple II Plus are registered trademarks of Apple Computer. Z-80 is a registered trademark of Zilog, Inc. CP/M is a registered trademark of Digital Research, Inc.

# Alpha Byte STORES

## We built a reputation on our prices and your satisfaction.

We guarantee everything we sell for 30 days. If anything is wrong, just return the item and we'll make it right. And, of course, we'll pay the shipping charges.

We accept Visa and Master Card on all orders. COD accepted up to \$300.00. We also accept school purchase orders.

Please add \$2.00 for standard UPS shipping and handling on orders under 50 pounds, delivered in the continental U.S. Call us for shipping charges on items that weigh more than 50 pounds. Foreign, FPO and APO orders please add 15% for shipping. California residents add 6% sales tax.

31245 LA BAYA DRIVE, WESTLAKE VILLAGE, CALIFORNIA 91362

package that allows the user selective access to the mass storage devices and even provides file protection capability. A large collection of application software is offered through Peachtree Software.

### **Lazor Systems' Lazor-5**

The Lazor-5 is the starter system in a family of 16-bit small business computers. The basic system consists of 128K of memory and 2.4M-byte floppy storage. Additional peripherals can be added to allow up to 16 users access to up to 96 Mbytes of disk data.

The product line was described in detail in IA (Jun 80) where some of the key features of the hardware (I/O processors and interrupt structure) and software (MLX multi-task operating system) were pointed out. One other key feature not available in many small systems—nor even in most minis—is ECC (memory error checking and correction). This feature will minimize problems in the computer operation due to memory failures and enhance system reliability beyond that offered in all but the largest systems.

The Basic compiler offers the most extensive implementation of Basic available for 8086 processors. The company also offers a Cobol compiler that is a high-level implementation of the ANSI 74 Cobol standard. The application programs combined as a system turnkey package with hardware makes systems such as the Retailer practical for the small retail store.

### **Mercator's MBS 3000**

The MBS 3000 is one of the first products to incorporate Intel's 8088—the half-brother to the 8086, yet still a 16-bit CPU. It also incorporates Intel's Multibus (or at least, the company claims that the system is multibus compatible). Although offered on a table top configuration, it is also offered in a rack mount version.

The basic system includes a 10M-byte Winchester, a 160-cps printer and two terminals. A total of four terminals and up to 40 Mbytes of disk storage—20 Mbytes in the basic chassis—can be configured for the maximum system. If more capacity is required, the MBS 4000 can support up to eight users. With 12K RAM, 20M-byte disk, and 300-lpm printer and six stations, the MBS 4000 lists for \$45,100.

The operating system is actually the company's Basic, which is a customized business version. No other languages are supported. While a word processing system is not offered, an extensive array of application programs is available. In addition to the traditional accounting packages, which operate either independently or interactively, specialized programs are also available, e.g., sales order entry, job cost accounting and medical and dental packages. IDOL is the optional data base management software package.

### **Micro Five's Series 3000**

This newest small business computer system from Micro Five (formerly Micro V) offers an integrated system in a convenient package for desktop mounting. The package is only 13 in. by 18 in. by 25 in., yet contains the complete processor, 128K bytes of RAM, floppy diskette (1.2M-byte) and 10 Mbytes of Winchester.

When comparing this system with others, don't stop at the basic system price—the \$18,000 *includes* the above items. Most other systems allow the user to

start out small and build up to a larger capacity system with typically larger desk or floor space required. This unique integrated package makes it attractive for the *small* business, especially if higher performance can be justified on the initial purchase. Micro Five has learned from experience on its previous systems, Microstar I (IA Jun 80) and Microstar II (also a 16-bit CPU), that users want to be able to upgrade their software and that commitment is extended into the series 3000 and beyond.

The software packages, supported by the STARDOS operating system, offer a wide variety of business applications. There are even some less popular application packages (e.g. florist accounting and travel agency management) in the library of dealer-developed software programs.

### **Micromation's Mariner**

Although the Mariner is based on a 4MHz Z-80A micro-processor, the multi-user network configuration pushes the overall system capability up into the high performance range. Up to eight terminals can be connected in the master/satellite configuration by the addition of a slave processor board for each terminal or user.

Micromation's M/NET is the concept behind the satellite system configuration. This approach allows a user to start with the basic system (\$4,500) and add additional user stations as the demands on the system expand. The second user can be added to the Mariner for \$3,600 plus a terminal and each additional user, up to a total of eight, requires only the addition of one card selling for \$1,300.

The choice of operating systems include not only the almost standard CP/M or MP/M but also the company's own AMDOS, which is compatible with CP/M and has a built-in data base management system, providing capabilities usually found only on larger mainframe computers.

The company also offers a rack mount version called the M/System; it sells for about \$1,500 less than the Mariner, which is supplied in a futuristic cabinet.

### **Piiceon's Model 1000**

The model 1000 is a powerful intelligent terminal with stand-alone capability. Don't let the price deter you from investigating this system further. One key advantage, whether you regard this as simply a terminal or a computer, is the screen size. Piiceon considers itself to be the "full page screen computer manufacturer" and the result is a 66 line by 80 column *full* screen—ideal for word processing applications. The user can even double the character size and have 33 lines per screen.

The keyboard is a 107 key multifunction "soft" key keyboard. This means that the user can define the functions of some keys, as required by a particular application.

The model 1000 includes two RS232 serial ports, a Centronics compatible parallel printer port and a built in modem interface.

The present operating system is CP/M 86, but a multi-user operating system is anticipated. The programming languages are generally available from software houses. A Basic compiler (CBasic) not available on many systems is also offered.

A word processing system is also anticipated, but the company has not yet committed to any applications programs. However, there should be several CP/M-

based applications available that will operate on CP/M 86. This looks like an ideal system for any business considering word processing requirements.

### **Rexon's RX30**

The Rexon RX30 multi-terminal system is backed up by a company that is firmly dedicated to all the aspects of computer merchandising—hardware, programs, nationwide service, documentation and technical training seminars—that are vitally important considerations when making a computer purchase.

A basic single-user system consists of a central station in a 38-in. high cabinet, a CRT terminal and a printer. It is possible to support up to three additional CRT terminals and a second printer. The central station consists of a metal cabinet topped by a (nearly) 20M-byte dual-platter hard disk drive. The front of the cabinet swings open for access to a vertically mounted 6-slot mother board. Plugged into the board are the Executive Processor card, a Memory Module card, a Disk Controller card and a Device Adaptor card to connect up to four CRT terminals and two printers. Space remains for both an additional Memory Module and Device Adaptor card.

Each system includes a copy of Recap, a combination disk operating system, Basic language and utilities package.

The \$35,000 price includes a two-terminal RX30 with 64K bytes of memory, a 20-Mbyte disk drive and T1810 printer. Also included are installation, training and customer support. All of the Rexon-supplied software, including Idol (Interactive Definition-Oriented Language), a tool for writing certain types of data base manipulating applications programs, round out the package.

### **Symcro Systems' SB700**

The SB700 is another of the Z80A-based systems that provide a unique configuration of four or more microprocessors. While most multiprocessor arrangements dedicate each processor to a specific task (terminal, floppy, communication, etc.), the SB700 allocates tasks to any available processor through the hardware polling controller. Although the architecture allows the system to be expanded to 256 processors, the largest yet configured has been with 40 processors.

In order to manage the multiprocessor system controller, Symcro developed a system management software package dubbed MSL (Modular System Logic). MSL is a concept based on the same approach used in some of the large mainframe computers. Thus with MSL, each user can operate his own CP/M, yet have complete access to the system resources. A utility package, Easy Run, allows the user to easily integrate CP/M application programs from a wide variety of other vendors into a more homogeneous operating package.

The minimum system supports two users, but it can be expanded to 24. If you want to purchase a complete two-user system with two terminals and a 150 cps printer, you will pay \$24,975. When comparing prices, don't forget that the basic system also includes 10M bytes of hard disk storage and a 1M-byte floppy.

The application software packages include all of the standards in addition to an improved Wordstar package and custom accounting packages. Specific packages are also offered for the construction industry, the legal profession, manufacturing, retail sales and others.

### **Technico's T.I. 32**

This powerful system is based on TI's 9900 CPU. Technico has been offering a family of products with the 9900 for a number of years—primarily for the industrial market. (IA reviewed the SS-16 in Feb 80.)

Technico's experience in both extensive hardware support for its earlier products and the comprehensive software has carried over into this system. The key feature is the power offered by the dual 16-bit CPUs (hence the "32" in the model name). The dual processors enhance multi-user and multi-tasking applications and provide a much higher throughput for all applications.

One potential disadvantage of the 9900 is the shortage of standardized software packages. The company has solved this by offering its high performance software package for all types of small (and large) business applications. In particular, the extended Boss Basic II is similar to compilers used on the DEC System 10 and the Honeywell 6600.

The reasonable single user price (\$8,999) or even the multi-user system price (\$9,999) makes this a very attractive system for the small business that expects to grow into a larger system in the future.

### **TEI's System/48**

The first major system offered by this traditionally component-oriented manufacturer is a solidly executed business micro, highlighted by a multiprocessing system.

The basic system consists of a single pedestal-like enclosure containing two microcomputers, a separate printer in a low-boy cabinet and a single CRT terminal. The micros work together to share the overall computing load for a number of simultaneous jobs or users.

Each of the micros runs with its own resident copy of Magic, the company's proprietary operating system. It occupies about 18K bytes of the available 64K RAM space on each card, and can be described as a "CP/M lookalike," at least at the operator interface level. The operating system was designed so that many of the thousands of available CP/M-compatible programs will run on the system without modification—at least those programs that adhere to normal CP/M rules.

The basic system, complete with 18M-byte hard disk, 1M-byte floppy, a master processor and one for applications (each with 64K bytes of RAM), a 150-cps printer and single CRT terminal, lists for about \$22,000. The price also includes the operating system, DBMS, two Basics, two editors and some hardware diagnostics programs.

### **Texas Instruments' DS 990 Model 1**

Texas Instruments has aimed the DS990 series at the OEM. But with the company's large customer base and name recognition, the end user market is also a target. The company has used its own TMS 9900 16-bit microprocessor in the DS 990.

The DS990 model 1 is a single user system that can be upgraded to a multiuser DS990 model 2. One of Texas Instruments' thermal printers can also be integrated into the system or any external printer can be used. No disk other than floppies can be added.

The optional operating systems can provide Cobol capability (DX5) for \$1,200 or can support other languages (TX5) for \$1,700. While Cobol is included with DX5, Basic (\$800), Fortran (\$1,200) and Pascal (\$2,400) are available for operation with TX5. □

# YOU CAN PAY \$75

## THE COMPLETE MAILING LABEL AND FILING SYSTEM

What's the difference?? The difference is whether you buy "theirs" first and find out that it's not really what you wanted or needed.

From our many satisfied customers we have heard that complicated and elaborate Data Bases were what they bought first because they didn't know about the MAILING LABEL AND FILING SYSTEM. And when they got our system they breathed a sigh of relief when they found:

- 1) That all of our documentation is written for people like you who have small or medium-sized businesses *AND who DON'T have degrees in computer science.*
- 2) The MAILING LABEL & FILING SYSTEM is incredibly dynamic for a system priced so low. Four diskfuls and over 60 pages of straightforward documentation full of examples and suggestions. Everything you need to know **WITHOUT** extra technical information that you don't really need or want. **ALL FOR ONLY \$75.**
- 3) Continued technical support and update information sent to you, the user or through your dealer.
- 4) Disks that aren't protected so that you can back them up, go into the programs and adapt them for special needs if you so desire.
- 5) Supports just about every printer

# \$175 or \$275

### AND HERE'S WHAT YOU GET:

- Write, read, edit, print, record and delete
- Binary sorting for 2 second access
- Sorts all files alphabetically or by zip-code and writes alphabetical and zip directories
- Copy-by-record or by disk -- both backup programs included
- Prints out regular mailing labels with optional added lines
- Practice mailing label program
- Includes our unique copyrighted SUPER-FONT program, with 8 styles and 9 sizes of characters/numbers in 6 colors
- Reversible directory reading with quick-find option
- Prints out labels in file-sequence, alphabetical or zip-code order
- Range sorts, field sorts, or character-code sorts individually or concurrently - very dynamic
- User formatted fields
- Prints out sorted 80-column (or more) formatted address lists, phone lists, or user formatted lists, in file, zip code or alphabetical order
- Update, read, or insert into, either the zip code or alphabetical directory
- Multiple (or 2 level) COUNT/SORTs

... and get one **FREE!**

All the latest info on software, hardware, applications, and theory at savings up to 75%. Plus, discounts on software, games, cassettes, disks ... and more!

Join now and get *Computerist's Handy Databook/Dictionary* ... **FREE!!** (List \$4.95)

## 7 very good reasons to try The Computer Book Club ...

- **Reduced Member Prices.** Save up to 75% on books sure to increase your know-how
- **Satisfaction Guaranteed.** All books returnable within 10 days without obligation
- **Club News Bulletins.** All about current selections—mains, alternates, extras—plus bonus offers. Comes 10 times a year with dozens of up-to-the-minute titles you can pick from
- **"Automatic Order".** Do nothing, and the Main selection will be shipped automatically! But ... if you want an Alternate—or no books at all—we'll follow the instructions you give on the reply form provided with every News Bulletin
- **Continuing Benefits.** Get a Dividend Certificate with every book purchased after fulfilling membership obligation, and qualify for discounts on many other volumes
- **Extra Bonuses.** Take advantage of added-value promotions, plus special discounts of software, games, and more
- **Exceptional Quality.** All books are first-rate publisher's editions, filled with up-to-the-minute info

## THE COMPUTER BOOK CLUB Blue Ridge Summit, PA 17214

Please accept my membership in The Computer Book Club and send the 6 volumes circled below, plus a free copy of *Computerist's Handy Databook/Dictionary*. I understand the cost of the books selected is \$2.95 (plus shipping/handling). If not satisfied, I may return the books within ten days without obligation and have my membership cancelled. I agree to purchase 4 or more books at reduced Club prices during the next 12 months, and may resign any time thereafter.

# Here's how we spell relief: **SpellStar.**<sup>TM</sup>

**A**re you tired of squinting at your video screen to find spelling and typing mistakes in your word processing?

Then you need SpellStar—for prompt relief from the pain and discomfort of proofreading.

SpellStar is an optional addition to WordStar<sup>TM</sup>, already the most powerful and versatile word processing software on the market. SpellStar catches your spelling errors and typing mistakes before they catch you. It will save you inconvenience, embarrassment, and countless hours of staring at your screen. In fact, if time equals money in your business, it won't take long for SpellStar to pay for itself in time saved.

## **Fast, FAST relief**

SpellStar whizzes through your text at thousands of words per minute, comparing what you've written with its 20,000-word dictionary-on-a-disk. It flags every word not in its dictionary, giving you three choices. Change the word. Leave it as is. Or leave it and add it to the dictionary, and it won't get flagged again. You can put it in the main dictionary, or

just as easy, create your own supplemental dictionaries on other disks for such things as specialized terms and client names.

## **SpellStar vs. the competition**

SpellStar is not the first proof-reading software on the market. We just made sure it would be the best.

Other programs show you a list of apparently misspelled words on your screen, separate from the document. You must decide what to do about each word without seeing its context—and that can be confusing. But SpellStar actually operates within the WordStar program. So it lets you see each word *in context* before taking action. It's so much easier. And you're always only one keystroke from full word-processing capability.

Other programs give you a 20,000-word dictionary. But we compressed it into half the normal disk space. So there's much more space for your own entries.

Another advantage is SpellStar's many menus and prompts. They're designed to keep you out of the manual and at the keyboard as much as possible.

## **More help on the way**

Once we've handled your word processing, let MicroPro start solving all your computing problems—with our software solutions. MailMerge<sup>TM</sup>, another WordStar option, makes it easy to combine files to produce personalized form letters. SuperSort<sup>TM</sup> takes on the biggest sorting, merging, and selecting jobs. And DataStar<sup>TM</sup> handles data entry, retrieval, and update with tremendous power and precision.

Okay, so how do you spell relief now?

CIRCLE INQUIRY NO. 19

# IMPLEMENTING HEALTH MAINTENANCE PROGRAMS

by Kevin M. Hepler, M.D.

After decades of emphasis on curing sickness, modern medicine is now directing its efforts toward the prevention of disease and maintenance of health as one of its primary goals. And there is a growing sense on the part of the health consumer to accept responsibility for his own health. It is worthwhile to examine the issue of health maintenance in the medical profession and to make suggestions of how computers might be used by the family practitioner in private practice to streamline this task.

The concept of the annual physical exam has now been widely accepted by the layman. Indeed, surveys of patient visits to physician's offices show that 10-20% of all visits to a general practitioner's office are for examinations in which the patient has no specific complaint suggestive of disease. Instead, he is looking for undetected disease, advice on how to prevent illness and reassurance from the physician that everything appears "normal."

However, there is great debate within the medical profession on what should take place during such a visit. Critical analysis has recently shown that the annual complete physical examination with its associated laboratory tests and X-rays is not effective in changing

the outcome of many diseases. It also wastes medical resources. With the advent of modern technology and the improvement of laboratory methods, many common illnesses can be detected with simple tests. The process called screening involves the use of a basic procedure to examine large numbers of people for the existence of a given illness. Some common screening tests are skin tests for TB and the pap smear for cervical cancer in women.

Health maintenance also consists of immunization against infectious disease and health education efforts. Patients are taught to recognize symptoms of illness and to address controlling factors such as stress, alcohol abuse and smoking, which contribute to many major illnesses and deaths.

All of these interventions (screening tests, immunizations and health education) need to be performed during a visit for health maintenance. This group of interventions is often called the periodic health maintenance visit to distinguish this approach from the older idea of the annual physical exam.

While computerization would clearly streamline this procedure, the medical profession has been among the slowest disciplines to accept computers in day-to-day

practice. Many doctors, especially those working as part of a group practice, have moved toward computerizing their accounting systems. Many hospitals now have computer systems to keep track of laboratory data on patients. But the widespread use of computers to do actual diagnosis and management of patient problems is still a long way off.

Health maintenance programs could easily narrow this gap. The data are in a discrete form and easily handled by a computer. The information that needs to be maintained for each patient consists of a list of the screening tests and other health maintenance activities, the date and results of the last time this item was performed, and when it is due to be repeated. The manipulation of the required data involves capturing the data items, providing information to the physician or other health care worker when dealing with the individual patient, and making available various reports on the status of the program. This description of the operations involved is nothing more than that of data base management, a task already defined as well suited for a computer.

Most primary care physicians would like to implement health maintenance programs for their patients. Three factors act as barriers: fragmentation of medical care (whereby in our specialized system of medicine, no one doctor is primarily responsible for a given patient's overall health), patient resistance to such activities, and the lack of physician motivation.

This last item is indeed the most important barrier and arises for several reasons. The general practitioner's time is limited, and even if he did want to spend time on health maintenance, acutely ill patients take first priority. Health maintenance is not frequently rewarding, since many people must be examined to find the cause of an illness. In terms of time, health maintenance activity produces less income than the more expensive workup of an existing disease. Cost to the patient is also an important factor. Finally, the work is tedious and requires close attention on the part of the physician to recognize when a given test is due and to make sure it is carried out and followed up.

### **Keep it simple**

Guidelines to the doctor who wishes to set up a health maintenance program will help overcome some of these objections. First, he is advised to keep his effort simple to enable him to focus on the important issues. Next he needs to have an organized record system. Paramedical personnel can be used to carry out most of the routine work. There must be a system of checks to ensure that the system is being complied with, that patients are receiving the tests when indicated, and that positive results are followed up. Finally, there must be a means to analyze the program, using the data collected with a retrospective audit to determine how successful it has been and how it can be improved. A computer system would help with all of these aspects.

As an example of how this might be implemented, I was involved in developing such a system for the primary care clinic of a major southeastern university medical center. Here the department of information sciences had already developed a total computer information system that was used in the clinic. All record keeping activities in the course of patient care were

computerized. In fact, the paper medical chart was almost extinct.

Such a project could only have been developed in such a research institution because of the expense involved, although the system is now a proprietary software product. The system was invoked with initial registration of a patient; it provided scheduling for appointment and the interaction of various modules within the system, maintained a problem oriented record for the patient, kept track of drug prescriptions and laboratory results and provided billing and accounting

---

## ***Most primary/care physicians would like to implement health maintenance programs...***

---

functions. All of these activities depended upon the interaction of shared pieces of a common data base for each patient.

A health maintenance program was offered to patients and a new computer program module was prepared to handle these activities. Upon initial registration as a clinic patient, the individual was given the opportunity to participate in the health maintenance program. If he chose to do so, the module created a new section in his data base that seized upon data from the laboratory and medical records modules to determine the need for various screening procedures and kept track of when these tests were performed. Each time the patient returned to the clinic the computer scanned the health maintenance records and identified which screening procedures were due. This information was printed on the encounter sheet generated for use by the medical provider to record the results of his workup and served as an instant alert on the patient's health maintenance status.

In addition, the program kept track of immunizations for pediatric patients. The benefit to the physician was that the computer performed the routine work of checking through the data base; the benefit to the patient was that extra clinic visits for health maintenance were minimized. Plans were made to use this module to generate a list of patients who were overdue for screening procedures and schedule them for visits and prepare post card notices. Finally, the system could be used in research to determine which tests were effective and yielded large enough numbers of patients with a given disease to justify continuing the item as part of the health maintenance service.

Such a system could be easily implemented in a primary care practice. With each visit, the patient's file could be searched for the last date a test or procedure was performed. If the record indicates that the patient is due for a health maintenance activity, the computer could add it to the list for the doctor's attention. Since such a program would be short, run quickly and involve a minimal amount of data for a patient, a microcomputer system could easily be used. Lacking some sort of automated medical record, data could be manually

# \$30 lets you take advanced VisiCalc™ lessons from VisiCalc's creators.

Introducing SATN from Software Arts, Inc., the creators of the VisiCalc program. SATN (Software Arts Technical Notes) is a publication offering on-going support to all VisiCalc users—from novice to expert.

Each issue of SATN is filled with techniques and information to help you expand your present understanding of VisiCalc functions as well as learn advanced methods to help in developing *your own* VisiCalc applications.

**Benefit immediately from highly informative articles:**

- ♦ **Complete Applications in Detail:**
  - Payroll Tax Calculation using @LOOKUP
  - Mortgage Decision Calculation
- ♦ **In Depth Descriptions of VisiCalc Features:**
  - Contents of a Saved Sheet
  - Uses of DIF™ data file format
- ♦ **Unusual Applications and Techniques:**
  - Date Arithmetic
  - Recreational Mathematics

SATN is your personal pipeline to the people at Software Arts who invented and developed VisiCalc. Their knowledge and experience with VisiCalc is available to you in each and every issue.

#### Special Charter Subscription Offer

Get 7 SATN issues for the price of 6, if you subscribe by December 31, 1981. We'll send you a FREE copy of SATN when you return the coupon, or call our toll-free number 800-257-7850 to order a year's subscription at our special introductory rate of \$30.

#### Full Refund Policy

If you are not completely satisfied with your first issue of SATN, let us know within one month, and we will refund your money. Your free SATN issue is yours to keep.

# ADVANCES

# IN CPU DESIGN

by Bernard Conrad Cole

In the early 1970s, when Gordon Moore and Robert Noyce of Intel Corp. predicted that it would be possible to put the equivalent of an IBM370 mainframe onto no more than a few silicon chips by the end of the 80s, a lot of people laughed. The rest said it would take a little longer. Both are wrong, if new developments are any indication.

The introduction of prototype 256K bit dynamic RAMs, 1 to 4 Mbyte bubble memories and CPUs containing the equivalent of 450,000 transistors provides good examples. And these are still in the laboratory.

More exciting is the move from prototype to production of a wide range of new CPU designs, including: true 16-bit designs capable of accessing literally millions of bits of memory directly, equivalent in performance to many minicomputers; new 32-bit designs, still in development, designed specifically for high level computer languages and equivalent in performance to some mainframes; new hybrid 16-bit microprocessors, which are true 16-bit CPUs internally, but communicate with the outside world on an 8-bit bus; powerful single chip microcomputers, which, unlike the original I/O and control oriented CPUs, are designed for multiprocessing applications.

The impact of these new designs will be to erase, or at least blur, the distinction between personal/home

computers, small business computers, minicomputers and mainframe CPUs.

Complementing these advances in hardware is a continuing effort by software houses to develop the multi-tasking, multiprocessing and multiprogramming operating systems that these new 16 and 32-bit designs will require.

Of all the new 16 and 32-bit processors, the oldest (except for TI's 9900) but simplest is the Intel 8086, an improved 16-bit version of the 8080. It incorporates an 8080 type multiplexed bus expanded to a 16-bit external bus, and, as in the 8080, the instructions are byte oriented. The 8086 has 95 basic instructions, of which a substantial number are only eight bits long. Since its instruction set is basically an expanded version of the 8080's, code from the latter can be converted easily to the former. Internally, the 8086 retains an 8-bit instruction path similar to the 8080's and the ALU is also 16 bits wide, similar to the 8080's. Thus the 8086 is a widened 8080 with enhanced addressing and instruction prefetch.

Taking another tack, the Z8000 is not an enhancement of the Z80 and has different internal structure. It is a true 16-bit machine with data and instruction paths, both 16 bits wide. Its instructions are either 16 or 32 bits long and the instruction set is word-oriented. A single 32-bit instruction is used for set and move operations, while in the 8086, single byte instructions must be used.

The MC68000 from Motorola has an external 16-bit bus multiplexed from an internal 32-bit bus, and supports 56 basic instructions and 14 addressing modes. The total number of instructions is misleading, however, because many instructions perform triple operations. Instruction sizes vary from one to five words.

In addition to these well-known devices, which are now entering high volume production and are being incorporated into systems, a wide range of other 16/32-bit designs are appearing on the market.

National Semiconductor, for example, has announced a family of 16-bit microprocessors called the NS16000 series, consisting of the NS16008, NS16016 and NS16032 processors. Of these, the 16008 and 16016 are very similar, offering an internal data bus 16 bits wide and a direct addressing range of 64K bytes. In addition, either can operate in two distinct modes: native mode, in which the two processors have 100 basic instructions and are directly compatible with the 16032; 8080 mode, which permits direct emulation of the 8080, with a speed four times that of the 8080.

The 16008 and 16016 are designed to bridge the gap between the 8080 and high end members of the 16000 family. The primary difference between the two is that the 16016 has a 16-bit data bus and the 16008 has only an 8-bit data bus and is primarily suitable for use in systems with 8-bit wide memories and peripherals. The NS16032 has an address range of 32 Mbytes and does not have an 8080 compatibility mode. The internal data bus is 32 bits wide.

Just announced from Intel is a new 3-chip 32-bit design that is aimed at challenging the performance of many large computers. Designated the iAPX-432 Micromainframe, it is made up of three devices. Two of them constitute a general data processor (GDP): the iAPX-43201, which fetches and decodes instructions and the iAPX-43202, which executes them. Together they form a 32-bit processing element that supports a logical address space of  $2^{32}$  bytes. The memory architecture permits a virtual memory system address space of up to  $2^{40}$  bytes, which extends well beyond that of most midrange mainframes.

### Multiple processors

Its architecture allows the GDP to use higher level data types to improve the efficiency of instruction coding with high level languages such as Ada, a Pascal like language adopted as a standard by the military. Since the GDP is designed to operate with concurrent multiprocessing system structures, more processors can be added to a system without adding new instructions.

The third chip, the iAPX-43203, is an interface processor that provides attached processing capability to allow other processor products, such as Intel's 8086 or 8088, to be added to the system for specific job processing.

Another interesting design is a 32-bit CMOS microprocessor developed by Bell Laboratories. A register-based machine, its architecture is divided into two subunits, one optimized for fetching instructions, the other for executing them. Called the MAC-32, it features not only low power operation but is also fast, executing a 32-bit addition in just 60 nS. The instruction set is extremely rich, allowing all of its data types to be used with any instruction. Included are bit manipulation instructions that work not only on single

bits, but on fields and blocks of data. Containing the equivalent of 100,000 transistors, the MAC-32 operates off a 32 MHz clock.

The most highly integrated logic chip ever produced is the 32-bit microprocessor from Hewlett-Packard, an NMOS device incorporating 450,000 transistors onto a single IC. It has a register-based architecture that incorporates a 28 by 32-bit file memory on-chip. It also contains several special purpose hardware units, including a hardware multiplier that yields a 64-bit result from two 32-bit operands in only 1.8  $\mu$ S.

### Powerful chip set

From Data General is a family of NMOS circuits that emulates the high end Eclipse minicomputer. Called the Micro-Eclipse, the chip set forms the basis of an entire spectrum of system configurations from compact single board implementations to high performance minis. The implementations include the S140, a small general purpose minicomputer; the S250, a larger machine capable of array and floating point processing and the C/350, a high end mini with floating point and instruction set extensions aimed at large data processing applications.

At the high end is the M600, a multiple function mainframe sized computer. The Micro-Eclipse family is based on a CPU chip that executes a kernel of the Eclipse C/350 instruction set and supports up to two Mbytes of memory. It can accept external microcode from one or more additional microcontroller chips (XMCs) to accommodate additional instruction set expansions. Another companion chip, the system I/O device (SIO) provides compatibility with both the Eclipse and MicroNova I/O busses, at the same time providing several internal peripheral instructions. The CPU, XMC and SIO devices are interconnected by a 16-bit parallel system bus. A dedicated 8-bit bus enables XMCs to transmit microcode to the CPU.

Another entrant in the advanced 16/32-bit race is Texas Instruments, with its TMS9995 and TMS99000 families, extensions of its almost decade old TMS9900 16-bit CPU. Supporting each of these advanced CPUs are a variety of coprocessors and slave processors, which provide specialized capabilities that are too expensive to integrate onto the CPU chip.

For example, the 8087 floating point math coprocessor is designed to perform all of the calculations according to the IEEE approved format. Similarly, National's slave processors, which include a floating point processor and a memory management unit, handle complex tasks that would take an inordinate amount of space if incorporated onto the CPU. Motorola has just introduced a memory controller, the MC68451 to assist the 68000 in managing its 16 Mbyte address space. Zilog has already started delivery on its memory management circuit, the Z8010.

Compared to 8-bit designs, the new 16/32-bit CPUs offer a wide range of advantages to system designers, including compatibility with high level languages, faster throughput, larger memory, and addressing space in the Mbyte range.

Programs developed with high level languages are machine independent, which means that the programmer does not have to be familiar with the internal details of the particular CPU. Therefore, programs written on one CPU can be used on another without modifications.

Such software portability has not existed in the microprocessor field so far. The new 16/32-bit CPUs generally have certain features that aid compilation in high level languages, such as hardware multiply, divide and shifts; an expanded complement of addressing modes; multiple stacks and automatic decrement and increment. In addition, memory pointers of 16 bits or more in width allow for more memory accessibility.

The regularity of the instruction sets of most of these new 16 and 32-bit processors also allows for easy implementation of high level languages. Regularity means that a high percentage of the instructions can use the same addressing modes and can operate with any of the data types—either bits, bytes or long words. Also some of the processors have a number of special instructions that speed up certain aspects of code compilation.

8-bit microprocessors are generally limited to an addressing space of 64K bytes. By comparison, the addressing range of the new 16-bit CPUs is enormous, generally 1 Mbyte or more, with the 32-bit CPU in excess of 10 to 20 Mbytes at a minimum. Some can even operate in an extended or segmented mode for additional capability. Sophisticated memory management schemes are available, not only to extend memory range but to provide memory protection, segment variation and relocation.

A concern on the part of many small business and personal computer manufacturers has been how to obtain the higher performance and greater memory accessing capability of the 16-bit designs, but retain software compatibility with their 8-bit CPU based designs.

### Obtaining high performance

To meet this need, interim 16-bit hybrid designs have been developed, including the Z800 from Zilog, the 8088 from Intel, the 9980 from Texas Instruments and the 6809 from Motorola.

The Z800, which can run Z80-based software three to five times faster without revision, will be offered in two versions: a multiplexed Z800 bus compatible version that supports 16-bit data transfers and a non-multiplexed configuration compatible with the Z80 bus. The idea is to make it possible for users to upgrade hardware now with the Z800, allowing easy accommodation to the 16-bit Z8000 when software becomes available for that processor.

The Z800 is the first 8-bit machine to support 16-bit hardware, while retaining complete compatibility with previous generation software. The approach taken by Intel with the 8088 and TI with the 9980 is to offer 8-bit versions of their 16-bit processors, so that current equipment can execute 16-bit code while maintaining an 8-bit bus.

The 6809 design is somewhat similar to the Z800, except that the former does not maintain total operation code compatibility with the 6800, nor does it support 16-bit 68000 bus structures. It does, however, offer five times the speed of the 6800, as well as some internal 16-bit data paths for the user.

Until recently, most single chip microcomputer designs, such as the 8048, 8049, 8050, 8051 and 3870 were primarily I/O oriented devices aimed at low end control applications.

But with the development of bus-oriented single chip microcomputers such as the Z8 from Zilog and the

series 70 family from National Semiconductor, a wide range of traditional computing jobs in terminals, personal computers and word processors can now be made extremely portable. Indeed, low cost personal computers capable of "speak" high level languages are possible, via on-chip storage of condensed versions of such languages as Basic and Pascal. But perhaps the most exciting areas lie in multiprocessing applications, where several processors operate simultaneously on different programs, while sharing common memory and peripherals.

Even in traditional personal and small computer applications, multiprocessing is already being employed to increase the throughput and processing capability of present 8-bit designs. Commodore, for example, uses single chip microcomputers as intelligent controllers in the peripherals it supplies with its personal computers to relieve the main CPU from those chores.

### Dual processing power

The Z80 Softcard from Microsoft, in addition to giving the Apple II CP/M software compatibility, also turns that personal computer into a powerful dual processor. With the Softcard installed, the Z80 handles all of the traditional data processing and memory accessing jobs, while the Apple II's resident 6502 microprocessor handles all the peripheral accessing chores.

New small computers just now appearing on the market also employ dual processors. Hewlett-Packard's new CP/M-based personal computer uses two Z80 processors, as does Zenith Data Systems' Z89 computer and Fujitsu Ltd.'s Micro 8 computer, which incorporates two 6809s.

The Z8 and Series 70 are aimed at such applications as these. Fabricated with standard silicon gate NMOS, members of the series 70 family include the INS8070 with 64 bytes of on-chip RAM for data and no program ROM; the INS8072, with 2.5K bytes of ROM and the INS8073, which contains a Basic interpreter stored in the 2.5K bytes of on-chip ROM. In addition to incorporating the control logic needed for handling the bus contention problems associated with multiprocessing, the series 70 devices contain a number of specialized instructions helpful in word and data processing.

### Outstanding design

An even more powerful design is the Z8, with an architecture characterized by a flexible I/O scheme, an efficient register and address space and a number of ancillary features helpful in many applications. For I/O applications, the Z8 has 32 pins dedicated to input and output. But because the multiplexed data bus is merged with the I/O oriented ports, the Z80 can assume many different memory and I/O configurations, ranging from a self-contained small computer to a microprocessor that can address 124K of external memory, or a parallel processing element in a system with other processors and peripheral controllers. On the chip also are 2K bytes of mask programmed ROM.

To unburden the program from coping with real time problems such as serial data communication and counting/timing, the Z8 also has an on-chip universal asynchronous receiver/transmitter (UART) and two counter timers with a large number of user selectable modes. □

# USING ABBREVIATIONS IN APPLE PASCAL

by Alan J. Nayer

Inherent in most high-level programming languages is a wordiness that is usually considered a good trait. The similarity to English and the use of meaningful datanames lends a readability to the resultant code that aids the programmer in understanding, modifying and debugging a program.

One of the goals of CODASYL (the Conference On Data Systems Languages) was to create a language that was self-documenting. While not many programmers would agree that the language that resulted from this conference, Cobol, is fully self-documenting, not many would disagree that a well-written Cobol or Pascal program is easier to follow than an Assembler program. However, the wordiness can cause time-consuming and tiring sessions at the keyboard when creating a program in these languages.

One step is to allow certain oft-used words or phrases to be represented in an abbreviated form. For example, at one installation, the frequently used Cobol clause VALUE SPACE was abbreviated by the three characters .VS. At another, this abbreviation and all others were entered at the terminal in lowercase (non-abbreviations were entered in uppercase); VALUE SPACE was entered as the two characters vs. In both cases, the source had to be run through a utility program to expand all abbreviations to full form before compilation could proceed.

With Apple Pascal version 1.1, this time- and key-stroke-saving idea can be easily exploited to provide Pascal programmers with a set of useful abbreviations. One of the shortcomings of version 1.0 was the absence of exec files, such as those available in many Basic operating systems, including Apple's DOS, and in many mainframe editors, although not always known by the name exec.

An exec file can be broadly defined as a file of operating system commands. There are often tasks that the programmer must carry out repeatedly with no or few modifications. For example, those proficient in Apple Pascal probably repeat a short series of commands every time they boot the Pascal operating system. I almost always immediately enter the Filer, set the prefix volume to the diskette in drive #5, request an

extended directory listing of the prefix volume, and (if it is the first time I've logged on that day) update the system date.

Pascal's new exec feature allows me to store these commands in a text file, then execute this file of operating system commands whenever I boot up, or at any other applicable time. The exec file to perform the above tasks would appear as follows:

```
%FP#5  
E:  
D % % % %
```

The percent signs are exec delimiters; one is needed to initiate an exec file, four to terminate it. Those seeking more information on exec file syntax, capabilities and idiosyncracies should consult the addendum to the Apple Pascal operating system reference manual.

If I named this file BOOT.TEXT and stored it on the boot volume, I could run it after booting Pascal by entering X for execute, followed by EXEC/boot, then sit back and watch the operating system carry out my commands, just as if I was busily keying them in. After completion of the exec, the screen will be displaying the current system date and the system will be waiting for me to change it if I desire.

The first steps in implementing an abbreviation-expanding exec file are devising the means of abbreviation and choosing the strings to abbreviate. The best format for an abbreviation is one that begins with a special character, henceforth called the abbreviation indicator, such as the exclamation point (!), succeeded by a one- or two-character abbreviation. For example, the word READLN could be abbreviated !RL, the phrase PACKED ARRAY, !PA, etc.

The selection of strings to be abbreviated was based on two factors: the length of the string and its frequency of use. Although it might be nice to supply an abbreviation for the word PROGRAM, it was omitted from my list since it will almost always appear only once in a source program; conversely, the short word END was included due to its high frequency of use. Undoubtedly, other programmers would differ in their selection of strings to abbreviate. See figure 1 for a listing of my

exec file, EXPAND.TEXT. In order to show the leading space in most lines, and also to refer to specific lines in the exec file, each line is prefixed by the line number and an arrow (→). Both of these items do *not* appear in the actual exec file.

Let's follow the execution of the exec file. First, the E after the exec delimiter in line 1 causes the system to enter the Pascal Editor; it is assumed here that the file to act upon is workfile, \*SYSTEM.WRK.TEXT. After entering the Editor, the command bJB, where b represents the blank character, causes a jump to the beginning of the file, an unnecessary command at this point that is here for the sake of uniformity and readability of the exec file. The / indicates that the next edit command should act on all occurrences of the source string. RL is the command to replace "literally" occurrences of the source string with the target string. Both the source !BR, and target BLOCKREAD, are delimited by slashes.

### Replacing strings

To sum up this action, all occurrences of the string !BR will be replaced by the string BLOCKREAD, even if the string !BR is not a true word, i.e., is not necessarily preceded or succeeded by an alphanumeric (the L provides this option). If the Editor does not find any strings with the value of !BR in the file, it returns the message, PATTERN NOT IN THE FILE, and waits for a space before continuing. Therefore, a leading space is provided in the next line. If one or more occurrences of the source string were found, the space does no harm; it simply moves the cursor one position before jumping to the beginning of the file, when it interprets the JB edit command. After the last replacement has been acted upon, the Editor is instructed to quit by the Q in line 69.

It is next directed to write the edited file to the boot diskette under the name SYSTEM.EXP.TEXT. Upon normal termination, the exec file leaves the edited file in the Editor in the event you want to view or modify it.

Figure 2 shows a short program that will count the number of occurrences of any character in a textfile; abbreviations were used whenever possible. I saved this source program as the workfile and then executed the exec file by entering XEXEC/EXPAND.

In a few minutes, I had an additional file on my boot volume, SYSTEM.EXP.TEXT, the expanded version of the workfile (see figure 3).

Further explanation of some of the abbreviations is warranted. The last five, lines 64 through 68, are unique in one respect; the abbreviations following the abbreviation indicator are just one character in length rather than two, like the others. This is suggested because, depending on one's coding style, these words may often be the last word on a line. Unlike the word PROCEDURE, the word REPEAT is often the last (usually only) word on a line.

Using an abbreviation !Rb (where b again represents a blank) would not affect a replacement of the abbreviation !Rb with REPEATb, unless you remember to place a trailing blank after the abbreviation. Another way to reconcile this problem is to use a normal two-character abbreviation for REPEAT, such as !RP, but since this exec file is intended to reduce the number of keystrokes needed, the former method is better. However, these one-character abbreviations should remain at the end of the exec file. If the replacement of !R is placed

## dBASE II—\$595<sup>00</sup>

**30 DAY MONEY-BACK GUARANTEE  
—FREE BOX OF DISKETTES WITH EVERY ORDER—**

With dBASE II you can extend the power of your microcomputer to jobs that were previously reserved for the larger mainframes. Here's a partial list of applications that dBASE II has been used for:

- |                       |                     |                              |
|-----------------------|---------------------|------------------------------|
| • General Ledger      | • Check Management  | • Document Cross Referencing |
| • Journal of Accounts | and Writing         | • Legal Office Accounting    |
| • Accounts Receivable | • Time Billing      | • Scheduling                 |
| • Accounts Payable    | • Inventory Control | • Mailing Labels             |
| • Sales Tax Records   | • Job Costing       | • Calendar Events            |
| • Payroll             | • Tax Computation   |                              |

If your application calls for managing data, dBASE II may be the answer.

You can create a database and start entering data into it in less than a minute.

Type CREATE, then respond to the dBASE II prompts to name the file and define the fields in your records.

Once the record is defined, you can start entering data immediately, or add information later by typing APPEND. In both cases, dBASE presents you with an entire record structure for which you simply fill in some or all of the blanks.

Now, for a limited time only, you can purchase the most powerful DBMS system for your micro for the incredibly low price of \$595 delivered. We'll send you a copy of dBASE II, that you can run on your system, for 30 days. If you're not completely satisfied, then just send everything back and we'll return your money, no questions asked! Even if you go for another system, you'll be an informed buyer!! (dBASE II is a fine product by Ashton-Tate)

CIRCLE INQUIRY NO. 87

before the replacement of, say, !R(, all !R('s in the source program would be replaced by REPEAT(.

I grouped together some of the keywords utilized in two of Apple's intrinsic units, APPLESTUFF (lines 48 through 50) and TURTLEGRAPHICS (lines 51 through 63). If the program you want to expand does not use one or both units, leaving these replace commands in the exec file will not be detrimental.

However, to speed up the exec file, especially if your source program is large, the following tactic can be used. Suppose the program uses neither APPLESTUFF nor TURTLEGRAPHICS units, modify the exec file by inserting a < just before the JB in line 48. Then insert a > just before the JB in line 64. This will reverse the cursor direction for the duration of these commands and the exec file will rapidly pass through these replacements without scanning the whole file.

One final option is the choice of the abbreviation indicator. The letters of the alphabet and numbers can, of course, be discarded, leaving the special characters. I have used the ! in my demonstration, since it is highly unlikely that it will be immediately followed by a nonblank (if it is used at all) in most Pascal programs. The characters !"#%&?@ are probably the best candidates, since they are not meaningful Pascal symbols and are enterable from the standard Apple keyboard. Under most circumstances, I take a risk and use the period, since it does not require hitting the shift key. The period should be considered only if you do not work very often with RECORD definitions, because record qualification syntax usually requires a period.

While most Basic operating systems store all commands as a one-byte token, Pascal sources are not compressed, except for crunching leading spaces. Therefore, the amount of disk space used to store programs faithfully depends on how many characters are in the source. (Apple Pascal rounds the number of blocks up to the nearest even number.)

I noticed that the abbreviated program in figure 2 used up four 512-byte blocks, while the expanded version reserved six blocks. Therefore, it may prove beneficial to create a second exec file, possibly called COMPRESS.TEXT, which is basically a reversal of EXPAND.TEXT. The replacements should produce a compressed version of a source program by replacing all occurrences of BLOCKREAD WITH !BR, etc.

I tried this on a 30-block Pascal program and ended up with a 26-block abbreviated version, thereby saving 2K of disk space. Of course, this is useful only for relatively stable files, since the source program would have to be run through EXPAND.TEXT before compilation. A good use would be for increasing the number of programs that can be stored on your backup diskettes.

For those of you who use the Pascal Editor as a simple word processor for creating documents, a similar abbreviation-expanding exec file may be used to expand abbreviations of the words or phrases most often used in everyday documents. For example, writing business letters might be simplified by creating abbreviations for your name, address, city, telephone number and other commonly used items. Note that the possibility of confusing the exec file increases when working with upper and lowercase; the U option of the replace command may be useful in relieving this. □

# Do more with your Commodore. Plug in the printer that business professionals prefer.

Discover the quality difference and move up to Mannesmann Tally printing. The high speed 8024 serial printer comes ready to plug into and work with your Commodore system. No fussing with converters or adapter boxes.

Here's what you get. Print speeds up to 200 lines per minute. Full 132 column printing. Conforms with Commodore specified program functions for full software compatibility. Whisper quiet operation. Clean, crisp and pleasing print quality that's always consistent copy to copy. Rugged, industrial strength construction. A print head that promises years of usage before replacement. A machine you can drive as hard as you want, yet it never requires preventive maintenance. Never needs periodic adjustments.

There's more. An easy to change, snap-in ribbon cartridge. Dual tractor paper engagement for positive alignment. A built-in self-test routine. Double wide printing on demand. A nine-needle print head model for true descenders on lower case characters. An optional Quick-Tear kit for forms removal immediately after printing. See this machine for yourself.

Ask for the Model 8024 at your nearest Commodore dealer or contact us.

# A Master Disk Directory

by Gene Cotton

When working with disk files under CP/M, a particular file may be known to exist, but exactly which diskette contains the file is a mystery. In order to find the disk file, each diskette is inserted, the directory is listed, the diskette is removed and the new diskette is selected. This process continues until the disk file is found. This program was developed after a time-consuming search, while learning a new programming language called C. The objective was to create and maintain a master file that would contain the file names and locations of all files on all diskettes.

General requirements of a master directory are that the program: runs as a stand-alone program under CP/M; utilizes the existing CP/M directories; provides for "Adds," "Changes," and "Deletes," to the master directory by volume identification; lists the entries in the master directory based on search arguments with wild card options; and provides for extracting data from the master directory by search arguments into an ASCII .DAT file.

The C compilers usually generate .ASM files, which are assembled and loaded into a resultant .COM file. This satisfies the requirement for a stand-alone program. By utilizing CP/M BDOS function calls, the portability of the program is insured.

The directory of CP/M is organized as 4 entries of 32 bytes each per sector (128 bytes). The number of sectors is dependent upon the particular CP/M installation. Typically, 8 or 16 sectors are assigned, depending upon the diskette density.

A particular entry is "active" if the first byte is not equal to hex E5. Most IBM compatible diskettes are initialized by writing hex E5 into each sector during the formatting process. An active entry contains the file-name and extension in the 2nd through the 12th bytes. Bytes 17 through 32 contain the addresses of the disk

allocation blocks used for the file. The number of sectors actually used within the blocks is specified by byte 16 of the directory entry. The allocation is a function of the density, with single density usually 8 sectors per block. With 1K (1024 bytes) allocation blocks, only 16K can be allocated in each directory entry. Files larger than 16K would require additional directory entries. Each entry for a file is called an extent, and this information is kept in byte 13 of the directory entry.

The amount of disk space used by the file is calculated by adding the disk space allocated in each extent for the file. The amount of space used by a file and the amount of space allocated for a file will be slightly different. In order to accurately determine the amount of unused space on a diskette, it is better to use the allocated space.

It is useful to begin the investigation with the CP/M BDOS function calls that will be used. Function 0 (System Reset) is used to abort the program in the event that function 12 (Return Version Number) indicates that an earlier version than 2.0 is being used. Function 31 (Get Address of Disk Parameters), which did not exist in CP/M 1.4, is used to calculate the space available on the diskettes. Early experiments with function 35 (Compute File Size) determined that it is much slower than directly calculating the file size using the information returned by functions 17 and 18 (Search For First Directory Entry and Search For Next Directory Entry), and so it is *not* used. Function 14 is used to select the drive of the directory to be listed. Function 25 is used to keep track of the default drive in effect when the program was started.

Before the Master Directory program is written, the format of the Master Directory file must be established. The format used is:

relative  
record

# Finding the best software on the market can take you weeks.

## Reading this ad takes 31.7 seconds and gives you the same results!

The Westico Software Review Committee is easy to recognize. It's their red-rimmed eyes. You get that way checking through an endless parade of software programs.

And they do it so that you don't have to. But selecting good software is only part of what makes Westico one of the fastest growing companies in the software industry.

Having experts on staff who really understand both software and hardware is another. But Westico offers more than quality products and

support. We offer our unique 24-hour service overnight! Westico. We're working hard to be your software company.

The Westico 24-Hour Computer Hotline (300 baud) (203) 853-0816 for detailed program information and quick access ordering.

— A full range of professional software.

— Support for a wide variety of CP/M® and other computer systems, including: TRS-80 Model II, Apple, Vector Graphic, Cromemco, North Star, Micropolis, Ohio Scientific, Altos, Dynabyte, SuperBrain, Xerox, Zenith and more.

### TWO MORE GREAT PROGRAMS FROM WESTICO

#### Job Cost Control

This system can track and control costs of jobs in progress and monitor job profitability. It detects cost overruns and allows for corrective action. It can control the job's Accounts Receivable and provide information on employee performance for use in profit-sharing plans.

#### Features:

- Automatically apportions firm overhead expenses to jobs in progress
- Provides early detection of potential budget overruns
- Monitors profitability of jobs in progress
- Helps identify most profitable services
- Monitors employee performance across all jobs
- Tracks job-related costs and reimbursable expenses.

#### Reports include:

- Job status report
- Job update register
- Performance report
- Office income report
- Employee hour summary
- Job accounts receivable register

System & documentation — \$595

Documentation alone — \$20

#### Inventory Control for Manufacturers

This system includes standard inventory control functions such as maintaining and reporting on the status of the inventory stock as well as maintaining records of all transactions made against part numbers in stock. In addition, it supports multi-level bills of materials (BOM's), the creation of multiple part number transactions for jobs based on those BOM's, the tracking of jobs through work-in-progress, the generation of material requirements reports based on manufacturing schedules.

#### Reports include:

- Full inventory listing with valuation
- Inventory listing by category
- Costing bill of materials
- Material requirements report
- Assembly listing
- Job issue listing
- Job status report
- Part number usage report

System & documentation — \$995

Documentation alone — \$20

### The Software Express Service

25 Van Zant Street • Norwalk, Connecticut 06855  
(203) 853-6880 • Telex 643-788

Send for **FREE** catalog.

position	field name
0 - 2	volume identification number
3 - 10	filename
11 - 13	extension
14 - 15	number of kilobytes allocated

The volume number, filename, extension fields can be any of the ASCII characters permitted by CP/M. The number of kilobytes allocated is a binary integer in byte-reversed format. With this record format, the file can be blocked at 8 records per sector. This will simplify the file handling routines. The binary numbers in the file sometimes cause a text end-of-file character. File transfers using the PIP function of CP/M must use the "[0]" option to correct this problem.

To provide a textual (ED.COM readable) file, the extract function of the program will use a record format of:

relative record position	field name
0 - 2	volume identification number
3 - 10	filename
11 - 13	extension
14 - 16	number of kilobytes allocated
17	carriage return
18	line feed

The format differs with the addition of the carriage-return, line-feed fields, and the number of K-bytes allocated is output as decimal digits with one extra character position added.

The functions that are performed are common to all maintenance or update programs: add, change, delete.

The abilities to stockpile transactions (adds, changes, and deletes), list the master file and list the pending actions have been added to facilitate human interface.

The program will display a menu and return to it after each function. Options 1 and 8 allow for wild-card characters within the valid, filename and extension specifications. Normally, if a valid, filename, and/or extension is specified, only those entries that exactly match are processed. If a field is not specified, it is assumed that any field found is a match. If a question mark (?) is used within a field, it is assumed that any character found is a match. The asterisk (\*) is used when the remaining characters in the field can match any pattern. This convention is similar to CP/M's wild-card convention.

*Option 1, List Master Directory File.* Read the Master Directory file and display an entry matching the argument pattern. The volume identification is printed followed by the matching entries. The display is held until released by a keyboard response.

*Option 2, Enter Add (Change) (room for 2065 more entries).* The diskette to be added to the Master Directory file is placed into the "B" drive, and the directory is buffered in memory. Many diskettes may be buffered before the actual update (option 4) occurs. The remaining buffer space is displayed as a reminder. If the buffer becomes full, no further buffering is allowed until the Master Directory file is updated (option 4).

*Option 3, Enter Delete (room for 32 more valids).* The volume identification numbers of entries currently on the Master Directory file are buffered until the next update occurs. Entries that have just been added may not be deleted.

*Option 4, Update the Master Directory File.* The Master Directory file is read. Any incoming volume that matches a delete request is discarded. Any incoming volume that matches an add (change) request is dropped in favor of the new volume information. The unaffected records from the old master file and the add (change) volume information are merged to form a new master file with a .\$\$\$ extension. The old master file is renamed to .BAK and the .\$\$\$ file is renamed to .DIR. All pending transactions (adds, changes, and deletes) are erased.

*Option 5, Display Deletes List.* An ordered list of volume identification numbers of requested deletes is provided.

*Option 6, Display Adds (Changes) List.* An ordered list of volume identification numbers of requested adds and/or changes is provided.

*Option 7, Display Adds (Changes) Entries.* The memory buffer is displayed to reveal each directory to be added to or changed on the Master Directory file. The display can be aborted after any volume by pressing the control-C key in response to the "...press any key to continue" message.

*Option 8, Extract from Master Directory File.* Any valid, filename, extension on the Master Directory file that matches the request pattern is copied onto a new file named [MASTER].DAT, with automatic conversion of the binary integer value for allocated disk space to decimal digits.

*Option 9, Exit to CP/M.* Immediately terminates the program and returns to CP/M by way of the warm-boot. □

## 5 or 10 Mbyte Storage for Heath/Zenith, TRS-80, SuperBrain, S-100 microcomputers.

Now, 5¼" hard disk add-on storage for  
your computer, at a price you can afford.

Available for a surprisingly low \$3495 for the  
5 Mbyte hard disk, \$4350 for the 10 Mbyte disk.  
Disk drives and controller cards also available.

# A PRINTER FOR THE HANDHELD TRS-80

by Alan R. Miller

The Radio Shack handheld computer is truly pocket size. It measures less than 3 by 7 inches and has a one-line, 24-character liquid crystal display (LCD). The alphabetic keys are arranged in the usual typewriter style with a 10-key numeric pad on the right. The 12K bytes of memory include a 7K Basic interpreter and a 4K monitor. The remaining memory is for user programs.

Over 1,400 programming steps can be entered by the user. Editing is fast and efficient; any line can be recalled from memory and altered. When the left or right cursor movement keys are held down, the cursor rapidly skips across the display line. In a similar way, the forward and reverse scroll keys can be held down to rapidly move through the source programs line by line.

If a syntax error occurs during execution, the program stops and an error message is displayed. The key that scrolls to the previous line can be momentarily held down. This will display the offending line, with the cursor positioned at the location of the problem. When the computer is switched to editing mode, the cursor will still be at this location.

Many different programs can be stored in memory at the same time. Each separate program or subroutine is referenced by an ASCII label placed at the beginning of the section. For example:

```
650 "SIM" REM SIMULATION PROGRAM
660 GOSUB "BIG"
```

```
700 GOSUB "DET"
```

```
780 GOTO "SIM"
```

It can take more than an hour to enter a complete set of Basic programs into the pocket computer. Of course, once they are entered, they remain in memory even though the display is switched off. Occasionally, however, the pocket computer refuses to respond and must be reset. Unfortunately, this erases the user programs.

The source programs can be saved on cassette tape if an interface is available. It takes about five minutes to save all programs with the command `CSAVE "filename"`. The computer automatically turns on the tape machine at the beginning, then turns it off at the end. The tape can be verified by rewinding it and playing it back into the computer. Be sure to enter the date and a short note about the nature of the programs as the first few lines of code. When the tape is loaded back at some later date, you will know what the programs are for.

An extremely long program can be segmented into blocks and sequentially chained into memory with the help of the tape recorder. Each block of Basic can be recorded as a separate segment. The last line of each block contains the chain command and the filename of the next segment. The computer will automatically turn on the tape machine, read in the next segment and execute it. With this arrangement, program size is limited only by the length of the tape. The computer can also turn on the tape machine to read or write data generated by the program.

Until recently, the cassette interface has been the only available peripheral. Now there is a combination unit containing both a printer and a cassette modem. The printer turns the pocket computer into a complete micro. When the computer runs without the printer, it stops at each `PRINT` statement and displays the information. During execution, the user must press the `ENTER` key once for each `PRINT` line. However, when the printer is attached, each line is automatically printed in sequence. For example, the program:

```
10 FOR Z = 1 TO 4: X = 1/Z
20 PRINT USING "##"; Z; USING "###.#####"; X
30 NEXT Z
40 STOP
```

will produce the output:

```
1  1.00000
2  0.50000
3  0.33333
4  0.25000
```

A printout of the entire set of source programs can be obtained by giving the `LIST` command when the computer is in the programming mode. However, if only a single line of Basic code is examined with the command `LIST 30`, the line is displayed on the computer LCD rather than on the printer. Also, all output from the `PAUSE` command appears on the LCD rather than at the printer. Consequently, it may be necessary to revise programs after acquiring the printer. Finally, the results from all direct commands such as  $16 \times 38$  and  $1/7$  are given on the LCD display.

The printer output is narrow; no more than 16 characters can appear on a line. The impact printer uses a typewriter ribbon and cash register-style tape. The characters are formed with a 5-by-7 dot matrix, although only one row of dots is printed at a time. The

printing speed is 16 characters (one line) per second. The computer by itself is portable, since it is powered by four wristwatch batteries. The printer is separately powered by a rechargeable Ni-Cad battery. According to Radio Shack, this battery can produce 8,000 lines of output on a single charge. The printer can also operate while the charger is connected.

While there are advanced features such as PRINT USING, the computer's Basic dialect is primitive in many respects. Variable names are restricted to the single characters A-Z or A\$-Z\$. Each string variable can hold up to 5 characters. However, no string operations, such as conversion between string and numeric, are provided. Only a single, one-dimensional array is available. The array elements A(1) through A(26) use the same locations as the variables A-Z (and A\$-Z\$). Consequently, arrays must be used with care. For short arrays, use the variables X, Y, and Z for loop indices. For example:

```
FOR Z = 1 TO Y
  A(Z) = . . .
NEXT Z
```

If more than 20 array elements are needed, start the subscript at 27. That is, use an offset of 26. The Basic program shown in the listing demonstrates this technique. The program can be used to sort a list of numbers entered from the keyboard.

Place the computer into the programming mode and clear the memory with the command NEW if there are statement numbers in the range shown. You may first want to save existing programs on tape. Enter the program shown in the listing. Spaces are not important. In fact, all unnecessary spaces are automatically removed, while necessary spaces are automatically added. Switch to run mode and give the command RUN. Whenever a colon is displayed, enter a number more positive than minus 21 and press the RETURN key. After the last item has been entered, give a number more negative than minus 20 to terminate this phase. The numbers are stored in the array A starting with an index of 27. The items are printed out in their original order; then the sorting subroutine starting at line 300 is called. This Shell-Metzner algorithm is one of the fastest sorting routines. It uses temporary variables B, C, H, I, J, K and M. The variable N contains the number of items to be sorted. The offset for the array index is given by the variable D. After the numbers have been sorted in increasing order, they are printed out again but in the sorted arrangement.

If you want to use this program to sort the numbers in decreasing order, change the less-than symbol in line 310 to a greater-than symbol. To run this program without a printer, change the command PRINT to PAUSE in line 210.

At a price of less than \$250, the TRS-80 pocket computer is a bargain. I always take mine with me wherever I go. The printer interface, which includes the tape cassette modem, is priced at \$150. The Ni-Cad battery and charger are included.

Two unusual screws, with springs emanating from one end, are supplied with the printer. The owner is instructed to insert them into the back of the computer in place of the original ones. Perhaps this will solve the annoying lockup problem. □

"ASK ABOUT OUR 14 DAY MONEY - BACK GUARANTEE AVAILABLE ON SOME PACKAGES"

CIRCLE INQUIRY NO. 88

by Daniel Lovy

For centuries, codes and ciphers have been used for either of two purposes: to keep secret messages secret, or to amuse the puzzle solving sect of society. A cryptogram is a code where the alphabet of the original message is still used, but each letter is altered until the message is no longer readable (see figure 1). Following

THIS IS A CRYPTOGRAM

VYQS QS C PFKMVZJFCB

Figure 1. Scrambled message

is a cryptogram generator written in level II Basic on a 16K TRS-80 that will also run on a 4K machine.

The types of cryptograms vary in complexity. Some require the receiver to know some key word or phrase on which the code was based to be able to translate it. A rudimentary type of cryptogram is one wherein each letter simply stands for another. For short messages (as in figure 1), this works out fine. However, for something larger, like a letter, the method loses its value as an effective code, but gains appreciably as a puzzle.

ZTFR RTFZTR,

VCQHRFZAYFWKCCI ECR ZTVCZKQH WJKI  
MTIIFHT. IKQVT SCA MAIW JFDT IXTQW F  
HRTFW ZTFY CE WKMT KQ ZCKQH IC, K ETTY  
K IJCAYZ YTFDT SCA BKWJ ICMT BCRZI CE  
BKIZCM. AQECRWQFWTYS FYY MS BKIZCM  
VCMTI ERCM F HRTFW JAQHRKFQ IFHT FQZ  
MS XRQWTR BKYY QCW XRQW JAQHRKFQ  
VJFRFVWTRI, ICRRS.

VRSXWKVFYYS SCARI,  
WJT MFZ JAQHRKFQ

Figure 2. Sample run

As the message gets longer, more letters and words are repeated. Thus it becomes possible to slowly break the code.

For example, studies of the English language have shown that certain letters of the alphabet occur more frequently than others in a large sampling of "clear" text. The following list from *Collier's Encyclopedia*, 1976 edition, culled from a 50,000-word sample, is typical:

A 7.4%	N 7.9%
B 1.0%	O 7.5%
C 3.1%	P 2.7%
D 4.2%	Q 0.3%
E 13.0%	R 7.6%
F 2.8%	S 6.1%
G 1.6%	T 9.2%
H 3.4%	U 2.6%
I 7.4%	V 1.5%
J 0.2%	W 1.6%
K 0.3%	X 0.5%
L 3.6%	Y 1.9%
M 2.5%	Z 0.1%

If a letter in the encoded text occurs more frequently than any other, it's a good bet that it stands for "e." More sophisticated methods relay the fact that certain letter pairings ("en", "ne", "ing", etc.) regularly crop up in English usage. Of course, the method can be expanded to include whole words, such as "the" and "and."

### Encoding the message

Suppose a certain three letter combination appears several times throughout the message. By assuming it to be a "the" or an "and" or some other common three letter word and by replacing those letters with their actual counterparts wherever they appear in the text, some of the code can be broken. When more small words are solved, the letters used can help crack the larger ones.

Once you have entered the program and typed in RUN, the program will begin to input your message. It will number each line and provide a winking cursor as an added touch. When the message is finished, enter the last line typed, then an asterisk. The entire text will be printed on the screen and you will be given a chance to correct any lines that appear amiss. After all the corrections have been made, the program will take each letter of your message and replace it with the proper letter from its randomly generated scrambled alphabet, then send the encoded message to a printer.

The printer used in writing the program was Radio Shack's Quick printer. It offers three print densities, 80, 40, and 20 characters per line. I chose the 40 character/line setting to make the output easier to read. The LPRINT CHR\$(30) in line 120 does this. If you are using another printer, this statement may not be needed. The test for 40 in the last line of the program limits each line of the text to 40 characters. Again, if you are using a different printer, you can change this to any length of line.

The scrambled alphabet is generated in lines 40 and 50. Line 40 fills array A with the ASCII values of the alphabet (upper case only) and line 50 then scrambles that array. It does this by stepping through each element and switching it with a random element of the array. This provides a quick and suprisingly thorough scramble.

Another interesting feature is the winking cursor. This is done by the subroutine beginning at line 1000. The reason a separate input routine was needed is because the Basic input statement does not allow leading blanks, commas or other types of punctuation to be input in a string variable. If you want your display to have a winking graphics block, change the CHR\$(95) in line 1020 to CHR\$(143). □

ASCII disk files can be displayed on the console by giving the CP/M command

**TYPE (filename)**

There are, however, several disadvantages to the use of this command. First, the file scrolls by on the screen so quickly that one must immediately press control-S to freeze the display. The scrolling is then resumed by pressing any key. But control-S must then be pressed again to freeze the next screen. If any key other than control-S is pressed during the scrolling step, the task is aborted.

A second problem occurs when MicroPro's WordStar text formatter is being used at the no-file level. In this case, the disk directory is normally displayed on the console. Any program that can be executed from the system level can generally be run by WordStar at this time. Sometimes, it is necessary to inspect an ASCII file at the no-file level prior to an editing step. But the CP/M TYPE command cannot be given at the WordStar no-file level, since it is a built-in command rather than an executable program.

The solution to both problems is to utilize the program given in the accompanying listing. This very short program can be used to display any ASCII file on the console. For example, to inspect a file named LETTER.TXT, give the system command

**SHOW LETTER.TXT**

Either name can be preceded by the disk name. For example, if the default drive is C and Show is on drive A and LETTER.TXT is on drive B, the command should be

**A:SHOW B:LETTER.TXT**

The usual CP/M commands are available for error correction when the command line is typed. For

example, an incorrect character can be deleted by pressing the DEL or RUB key. A control-R can be given to reprint the input line. If you are using version 2 of CP/M, input errors can also be corrected with the ASCII backspace. A control-U can be given to cancel the entire input line. Of course, a control-C can be typed to abort the program.

Since Show is an executable disk file, it can be run from the no-file level of WordStar by first giving the R command. When the program is run, it fills the console screen with the first 22 lines of the file. Execution then automatically stops and the message: 'Press space bar to continue or anything else to quit' is printed. The next 22 lines of the file can be inspected by pressing the space bar. In this way, the entire file can be viewed, screen by screen. The process can be terminated prematurely by pressing any key other than the space bar.

If the requested disk file does not exist, an error message is printed and the program is terminated. Also, if an attempt is made to display an executable COM file, the program gives an appropriate error message and terminates.

All input and output are handled through calls to the CP/M BDOS at address 5. Thus the program will work with all standard versions of CP/M. The requested filename is read from the file-control block (FCB) at address 5C hex. The original stack pointer is saved at the beginning of the program, and then restored at the end. Thus a warm start is not performed at the conclusion of the program.

If your console screen has less than 24 lines, you will want to change the value of LMAX near the beginning of the program. It should have a value that is two less than the number of lines on the screen. □

**Program on page 170**

...And my dad says GRAFTRAX 80  
does better graphics than anybody.

# Epson.

You might say it's the head of its class. GRAFTRAX 80 gives you the highest resolution dot matrix in the world — up to 120 dots per inch horizontally and 216 dots per inch vertically. Which makes our MX-80 and MX-80 F/T work more like a plotter than a printer.

And that's just for starters.

GRAFTRAX 80 more than doubles the features available in an Epson MX-80 or MX-80 F/T. For instance, we've added nice little touches like an italic character set — which doubles the number of font types to 24. And with GRAFTRAX 80, you can change style, size and density anywhere in the line. And backspace the head. And use block graphics with *any* computer. And redefine all escape codes under software control.

Up to now, you couldn't get some of these features at *any* price. With GRAFTRAX 80, you get 'em all. And more. Lots more.

Best of all, we haven't forgotten all those people who already own an MX-80 or MX-80 F/T. You own the printer that set the standards all the others are following. And you can install GRAFTRAX 80 PROMs yourself, for less than \$100. And make the best even better.

You can see why we say GRAFTRAX 80 is the head of its class. There's nothing else in its class.

# EXPAND YOUR COMPUTABILITY

## with books from

### DATA DYNAMICS TECHNOLOGY

#### **Practical BASIC Programs**

*Edited by Lon Poole*

This book is especially useful in small business applications. It solves problems in finance, management decision, mathematics and statistics. It requires no prior programming knowledge. Each program is thoroughly documented. The book contains sample runs, practical problems, BASIC source listings, and an easy to follow narrative to help you realize the potential uses of each program.

**ORDER NO. 0-931988-38-1      \$15.99**

#### **Small Computers For The Small Businessman**

*By Nicholas and Sharon Rosa*

Here is an excellent guide for the businessman who is interested in finding out what a computer can do for his business, but is not interested in becoming a "computer nut." Specific topics addressed include accounting, records, warehousing, light factory operation and parts inventories. If you've ever considered a computer for your business but didn't know quite where to turn, this is the book that will arm you with all the information you'll need to make an intelligent, cost-effective decision.

**ORDER NO. 0-918398-31-2      \$12.95**

#### **Basic Business Software**

*By E.G. Brooner*

Many small-business operators will not know how to accurately judge canned business software or be able to write their own programs. This book was written for them. It will provide insight into how business software is designed so that proper evaluation of programs written by others can be made. It will also enable some people to write their own programs.

**ORDER NO. 10,062      \$9.95**

#### **Are You a Computer Literate?**

*By Karen Billings and David Moursund*

For many years, educators in computer science have stressed the need for everyone to learn something about computers. They recommend that you learn the capabilities, limitations, applications and implications of computers. This book is designed to help you become computer literate. It does not assume any previous experience with computers nor require any computer equipment.

**ORDER NO. 0-918398-20-0      \$8.95**

#### **8080 Microcomputer Experiments**

*By Howard Boyet*

This book assumes no background whatsoever in computers and microprocessors. After two chapters of the required digital logic and microcomputer architecture theory, the book proceeds directly into the 105 experiments presenting programs and diagrams as required for clarification. The experiments offer a wide exposure to processes of software control, single stepping and interfacing.

**ORDER NO. 0-918398-08-8      \$16.95**

## The FORTRAN Cookbook

By Thomas P. Dence

Whether you're an accomplished computer user or have almost no programming experience at all, this book has something for you. From the basics of number theory to the advanced problems of calculus and integration, this book covers a wide variety of mathematical exercises, computer applications and FORTRAN programming exercises. Using the FORTRAN language, you'll be able to solve problems involving square roots, cubes, digital roots fractions plus much much more.

## A FORTRAN Coloring Book

By Roger Emanuel Kaufman

Handwritten and illustrated with the author's outrageous cartoons, this book is definitely the relaxed way to learn a complex programming language. But don't be fooled by the duck on the cover, it is one of the most technically accurate and precise texts on FORTRAN currently available.

ORDER NO. 0-262-61026-4

\$6.95

## The Computerization of Society

By Simon Nora and Alain Minc

First published in 1978 as a report to France's President, Valéry Giscard d'Estaing, this book became a best-seller abroad and the cause of instantaneous and widespread public discussion. It portrays a revolution, in some ways comparable to the Industrial Revolution, which is the result of the growing interconnection between computers and telecommunications.

**ORDER NO. 0-262-14031-4 \$12.50**

## File Processing With COBOL

By Donald H. Beil

This book is designed for those who have an introductory knowledge of the COBOL language. Working on this foundation, you will learn how to create, merge, sort and update sequential and sequential indexed files in COBOL. You'll be impressed with unique flow charts at the systems level, and effective technique for presenting each concept quickly and easily. Two extensive case studies provide significant supplementary material, and show how to apply new skills. Each chapter concludes with a summary, plus programming and non-programming exercises to reinforce learned concepts.

**ORDER NO. 0-8359-1984-6 \$13.95**

## How To Troubleshoot and Repair Microcomputers

By John D. Lenk

Microcomputer and peripheral system repair will be simple for any advanced computer hobbyist or technician who has this book. Using circuits and systems found in one of today's leading microcomputers as typical examples, the author shows how to locate and repair the cause of trouble in any central system or peripheral or in any control system using a microprocessor.

**ORDER NO. 0-8359-2981-7 \$7.95**

## S-100 Bus Handbook

By David Bursky

Computer fundamentals, basic electronics and the parts of the computer are covered here. The book explains all the operating details of commonly available S-100 systems. Schematic drawings of all boards discussed in the manual are provided for reference. Each major system board is discussed in complete detail, as to how it operates and how it connects into the rest of the system.

**ORDER NO. 0-8104-0897-X \$14.50**

## How To Computerize Your Small Business

By Jules A. Cohen

This is a complete step-by-step guide to selecting data processing equipment and services, and shows you how to plan a computer system tailored to the needs of your small business. It not only describes the basics of how a computer works, but also advantages and limitations of the most popular types of computer equipment.

**ORDER NO. 0-13-403857-6 \$7.95**

## Programmer's Guide to LISP

By Ken Tracton

This fact-filled handbook offers a simplified method of learning LISP, the best known language of artificial intelligence. The first part of the book follows a logical progression to guide you through the basics of algebraic functions, expressions, atoms, symbols, lists, sublists, and subexpressions. The last part of the book shows how to write complete LISP programs, and offers instructions on computer input and output.

**ORDER NO. 0-8306-1045-6 \$6.95**

## 8080/Z-80 Assembly Language

By Alan Miller

For both intermediate and advanced programmers, this complete guide to programming the 8080 and Z-80 microprocessors lets you get every response your computer is capable of generating. Learn the details of assembly language programming easily and quickly—as you develop a powerful system monitor in a step-by-step, top-down approach. You'll start with number bases and logical operations, then move on to branching, rotation and shifting, one's and two's complement arithmetic, and stack operations. You'll find out how your assembly language programs can utilize the CP/M operating system for all input and output.

**ORDER NO. 0-471-08124-8 \$9.95**

## The Joy of Minis and Micros

By Philip Stein and Howard Shapiro

Here's a collection of pieces covering technical and management aspects of the use of small computers for business or science. It emphasizes the use of common sense and good systems design for every computer project. A strong technical background is unnecessary, which makes the book neither difficult to read nor to understand.

**ORDER NO. 0-8104-5156-5 \$9.95**

## Aspects of Distributed Computer Systems

By Harold Lorin

You will gain completely new insights into software structures, centralization vs. decentralization, hardware and operational costs, and much more. Both designers and users of distributed systems will find this new approach to be extremely valuable in their work.

ORDER NO. 0-471-08114-0 \$27.50

## Managing Software Development and Maintenance

By Carma L. McClure, Ph.D.

In this book, the author points out how to control rising software costs by the application of software engineering principles and methodologies to software maintenance, as well as to software development activities. The author shows you how to build the quality of maintainability into a software system during the development phase and how to preserve software quality during the operation and maintenance phase. System design methods emphasizing creating software that is easy to change is the key.

ORDER NO. 0-442-22569-5 \$16.95

## Apple II User's Guide

By Lon Poole, Martin McNiff and Steven Cook

It's all here in the new Apple II User's Guide. This guide will compliment your owner's manual and give you a heightened understanding of your Apple II. With this book you'll be able to program in BASIC. You'll be able to use the sound and graphics features of the Apple II to create your own colorful video games. There's also a review of the Apple II printer as well as a chapter on controlling "Real" processes, like burglar alarms and appliances.

ORDER NO. 0-931988-46-2 \$15.00

## Guide to Good Programming Practice

Edited by Brian Meek and Patricia Heath

This is the first book to bring together in a compact format, real guidance on the many aspects of a computer programmer's work. The book covers structural programming and program writing techniques. But it goes further by explaining much more than that. It covers analysis, design, testing, debugging, "Tuning" for better efficiency, copying with a computer's limitations, selecting a language, language standards, program documentation, taking on another programmer's work, and more.

ORDER NO. 0-470-26869-7 \$32.95

## Some Common BASIC Programs

By Lon Poole and Mary Borchers

This book contains program listings and documentations for 76 short programs covering financial, mathematical, statistical and general interest applications. Every program has been tested; examples and sample program runs are published with the source listings for each program.

ORDER NO. 0-931988-06-3 \$14.99

## Sargon: A Computer Chess Program

By Dan and Kathe Spracklen

Here is the computer chess program that won first place in the first chess tournament at the 1978 West Coast Computer Faire. It is written in Z-80 assembly language, using the TDL macro assembler. It comes complete with block diagram and sample printouts.

ORDER NO. 0-8104-5155-7 \$15.95

## The Essential Computer Dictionary and Speller

By Charles J. Sippl

This book is for anyone whose job requires familiarity with computer or electronic words. This book provides a reliable, fingertip source of both spellings and meanings. Handy, business-oriented dictionary defines more than 15,000 computer terms and acronyms, simply and practically. More than 100 pictures, line drawings, and other figures assist in providing clarity and greater ease-of-use for browsing and learning.

312 pages  
\$29.95

'It has twelve thousand one-liners in it, and every one is great!' - Dennis Kitsz.

**TRS-80 Disk & Other Mysteries** is the definitive **fixit** book for disk users. More than 130 pages of easy to read, entertaining and immensely useful information - find out how to recover disk files, the layout of information on disks, memory maps, problem solutions ... the list goes on!

Many readers have saved days of work by recreating disk files that were unreadable. With more than 14,000 copies sold so far, **TRS-80 Disk & Other Mysteries** has received favourable reviews in several magazines. Yours for only **\$22.50** (plus \$1.50 shipping, CA residents add \$1.35 sales tax).

**Microsoft BASIC Decoded & Other Mysteries** is the definitive guide to your Level II ROMs. With more than 7,000 lines of detailed comments, and 6 additional chapters packed with information, it is easily the biggest and best book about the Level II ROMs available.

Written by James Farvour, the comment section took more than a year to finish - it even includes the changes for the latest ROM sets. Edited by Jim Perry, the founding editor of 80 Microcomputing, the text and comments are understandable.

Exploit the full power of Microsoft BASIC, with the aid of more than 300 pages of tested examples, explanations and detailed comments. Only **\$29.95** (plus \$2.00 shipping, CA residents add \$1.80 sales tax).

**CAPTURE THE OEM MARKET WITH THIS DIRECTORY**

## Dataguide™

The master catalog and directory of OEM computer products

### Two Directories in One Handy Volume:

- The **Manufacturers Directory** contains 2,000 listings of companies in alphabetical order, including full address, phone number, president's name, primary sales contact, year established, number of employees, and annual sales volume. In addition, advertisers receive full listings of all domestic and foreign sales offices, dealers, agents and reps.
- The **Product Directory**, the "yellow pages" of the computer field, provides easy, instant reference to the suppliers of more than 100 specific types of computer products. Advertisements within the Product Directory section are organized by product type to help the buyer shop and compare.

It's the **first!** It's the **only** buying reference exclusively for the high-volume, computer OEM marketplace. A simple idea whose time has come.

Keeping tabs on who makes what in the computer field can be a fulltime job. DATAGUIDE saves its readers time and money by providing finger-tip access to thousands of U.S. and international suppliers.

## SITTING PRETTY

You can use just about any desk for a computer terminal stand. But with CF&A, you're sitting pretty. Our full range of desks, workstations, and terminal stands are designed to accommodate a variety of computer equipment. Choose from our Classic Series desks, DR Series desks and enclosures, specialty items like our Apple II desk, or a universal printer stand. You'll be sitting pretty with attractive color selections, durable construction, versatile configurations, useful options, competitive prices, quick delivery, and personal service. It's our way of doing business.

## NEW PRODUCTS

**Disk drive controllers** integrate up to four 5¼-in. Winchester drives using Seagate-type interface with popular microcomputers (LSI-11, multi-bus, S-100, Apple II, TRS-80). The DTC-510 controller handles up to two Winchester drives. The DTC-520 handles up to four drives in any combination of 5¼-in. Winchester and flexible mini-floppy (IBM compatible single or double-density, single or double-sided). Both controllers feature microprocessor intelligence, single board design, shared power supply with same power requirements as drives, and efficient host protocol. Standard DTC host adapters

simplify interface with a wide range of microcomputers. Controller functions include overlapped seek, logical to physical unit correlation, automatic seek and verify, automatic head and cylinder switching, odd parity checking, logical sector addressing, sector buffer and interleaving, error detection and correction (ECC), extensive fault detection, and integral data separation. Prices: DTC-510, \$650; DTC-520, \$750 (500 unit pricing). Data Technology Corp., 2344A Walsh Ave., Santa Clara, CA 95051, (408) 496-0434.

CIRCLE INQUIRY NO. 220

**Data processor**, 2150, is the OEM version of the 1550 dispersed data processor. The 2150 includes all the features, enhancements and wide range of disk configurations of the 1550, but will be offered to OEMs exclusively. This desk-top processor can be used for a wide variety of applications, such as data entry, data processing, word processing, electronic message services, data communications and personal computing. Multiple workstations can also be supported. The 2150 comes with 32K, 64K or 96K of memory. Software will support up to 64K. It is available with either 8-in. diskette drives or hard disk drives. The dual diskette modules are available in either single sided-single density or double sided-double density versions, giving the user a choice between .5M-byte and 2M-byte systems. Datapoint Corp., 9725 Datapoint Dr., San Antonio, TX 78284.

CIRCLE INQUIRY NO. 221

**Neon plasma displays** with switch selectable fonts, model numbers 3401-XX-320 and 3401-XX-480, are contained in a 2K by 8 EPROM (2716). Up to four fonts can be addressed from a DIP switch. Standard fonts include 64-character English, 64-character European and 96-character English with

upper and lower case characters. Characters are formed in a 5 by 7 dot matrix, model 3401-XX320 has 8 lines of 40 characters and model 3401-XX-480 has 12 lines of 40 characters per line. Data is transferred serially up to 100,000 bits per second in

either 6-bit or 7-bit ASCII. The 3401 series requires only two voltages, 5VDC at 160mA and 150VDC at 185mA. Prices in production quantities start at under \$550. IEE, 7740 Lemona Ave., Van Nuys, CA 91405, (213) 787-0311, ext. 210.

CIRCLE INQUIRY NO. 222

**LSI circuits** are for equipment using the IBM 3270 Information Display System standard. Two chips now replace the 40 chips previously required to perform encoding, transmitting, receiving and decoding functions in these systems. These proprietary interface devices, the DP8340 transmitter/encoder and the DP8341 receiver/decoder, perform all encoding/decoding functions—no peripheral encoders or clocks are needed. This lowers system cost and reduces circuit board size requirements, allowing new product features to be added in the freed-up space. The devices perform at very high speed, handling data rates up to 3.5 MHz. And, whereas the IBM standard covers only Bi-Phase serial communication over a coaxial cable, the DP8340 and DP8341 also adapt to generalized high speed serial transmission over other than coax lines (such as twisted pair, fiber optic and single-ended), at frequencies either higher or lower than the 3270 protocol's 2.358 MHz data rate. Price: \$21.50 in 100 piece quantities. National Semiconductor, 2900 Semiconductor Dr., Santa Clara, CA 95051, (408) 737-5000.

CIRCLE INQUIRY NO. 223

**Microprocessor development system**, UMDS-50, can be configured to support up to 20 users. The system includes a high speed, 16-bit DEC CPU (11/44), memory management unit, cache memory, dual 10M-byte disks, 256K bytes of memory and 16 serial ports. Software includes BSO microprocessor development software and DEC's RSX-11M operating system, editor and other utilities. The development software is accessible to any user and operates entirely within the user's memory space. The compactness of the software, plus its assembly language coding makes operation and response extremely fast. The system accepts and works efficiently with all BSO development products. It can therefore be

configured not only to 20 simultaneous users, but also for up to 35 different microprocessors. Price: \$60,000 range, depending upon memory, terminals, size of disks and software. Boston Systems Office, 469 Moody St., Waltham, MA 02154, (617) 894-7800.

CIRCLE INQUIRY NO. 224

**Floppy disk controller board, FDC-880H**, is compatible with the Heath 88/89 microcomputer. It allows users to double their 5¼-in. disk storage capacity without adding drives or disks. The board runs under the industry standard CP/M 2.2 operating system and is capable of handling up to four Shugart compatible 5¼-in. or 8-in. drives simultaneously. It also handles single and double-density data. The board converts the 5¼-in. hard sector disks to standard soft sector double density. It occupies any I/O slot in the H88/H89 microcomputer without modification. Included with the controller board is a 10-ft. interconnect cable, zero origin conversion PROM, boot PROM with floppy diagnostics and hardware/software manuals. Price: \$695. CDR Systems, Inc., 7667 Vickers St., Suite C, San Diego, CA 92111, (714) 275-1272.

CIRCLE INQUIRY NO. 225

**Dual-service board, PB1**, combines programming and memory capabilities and permits improved utilization of slot space in S-100 based microcomputers. Four on-card sockets are provided for a total of either 4096 or 8192 bytes of memory, depending upon whether 2708 or 2716 EPROMs are used. Two programming sockets are also provided, one for a 2708, another for a 2716

—both are DIP-switch programmable to any 4K boundary. The use of Textool sockets,

for example, means that flipping a lever lifts an EPROM out of a programming socket, thus preventing damage (through prying) to both the EPROM and the board itself; separate on-card circuits allow programming of 2708 and 2716 (5 V) EPROMs without board modifications; and the programming voltage is generated on-board. Price for board that's assembled and tested plus complete software: \$265. Kit version: \$179. SSM Microcomputer Products Inc., 2190 Paragon Dr., San Jose, CA 95131, (408) 946-7400.

CIRCLE INQUIRY NO. 226

**Flexible disk drive**, model M2894, features a unique dual gimbal head assembly. The double-sided, double-density 8-in. disk drive is fully compatible and interchangeable with industry standards like Shugart's SA850R (-63 interface). The unit is also IBM information and media compatible. Electronic functions and logic controls are LSI-microprocessor based for signal and data integrity. Two all-ferrite MnZn heads in a special-

designed gimbal mounted assembly enable soft, stable contact with media regardless of disk surface fluctuations thus eliminating possibility of media damage. Mitsubishi Elec-

tronics America, Inc., Computer Peripherals Div., 2200 W. Artesia Blvd., Compton, CA 90220, (213) 979-6055.

CIRCLE INQUIRY NO. 227

**Product development package** has all the necessary features of the development system to prototype a microprocessor based product. The Z-80/PDP has user insertable breakpoints, single step, memory/register examine, and a built in PROM programmer. All the additional hardware for the prototype can be placed on the ample wire wrapping area in the Z-80/PDP. S-100 products can be tested or added using the S-100 interface connectors on the development package. The Z-80/PDP may be linked to a CP/M based system with a single serial port. One writes the program using a sophisticated editor, debugger, and simulator. The program is down loaded to the Z-80/PDP with a single

## NEW PRODUCTS! NOW AVAILABLE FROM AUTOMATED EQUIPMENT

### TELEVIDEO SYSTEM I

The Televideo System I is a CP/M® based single-user computer system. State-of-the-art design and single board construction accounts for Televideo's reliability and exceptional price performance. Cobol, Basic, PL/1 and Fortran are just a few of the high level languages available. As your needs grow so can your Televideo computer system. The System I can be a satellite computer of a larger network of user stations using the multi-processor multi-tasking System II or System III. System I includes TS-81 computer, Televideo 910 terminal (950 terminal available at additional cost) and CP/M® 2.2. Nation wide on-site service is available through General Electric service company.

**System I specifications:** Z80A, 64K Ram, 4K diagnostic Eprom, two 5¼" 360K drives, serial and parallel port.

CP/M® is a licensed product supplied by Digital Research, Inc.

See Televideo System Ad.

### NORTHSTAR ADVANTAGE COMPUTER

The Northstar Advantage Computer is an integrated package including full graphics capability. Line charts, bar graphs, pie charts and 3 dimensional displays are all possible as part of Northstar's optional graphics/DOS operating system or CP/M® graphics package. All Northstar applications software is available for the Advantage Computer. Slots for 6 additional expansion cards are included.

**Specifications:** Z80A CPU, 64K Ram, Green screen 12" monitor, 240 x 640 pixel graphics resolution, sculptured typewriter-like keyboard, two 5¼" 360K drives.

### ZENITH

Zenith Data Systems with world famous quality and reliability are now available from A.E.I. The Z89 and Z90 are standalone micro computers with a one piece design that simplifies installation and operation. With the board line of PeachTree accounting software and Micro-Pro word processing software the Zenith computers are the ideal small business systems. Heathkit/Zenith educational courses are available making the Zenith computer an excellent choice for the first time buyer.

#### Zenith specifications:

Z89—48K ram standard, Z80 cpu, 2 serial ports, built in 12" terminal, one 5¼" 100K drive, expandable.

Z90—64K ram standard, Z80 cpu, 2 serial ports, built in 12" terminal, one 5¼" 200K drive, expandable.

# DON'T BUY ANOTHER 64K RAM BOARD...

...without considering expandability for the future

Tired of buying a new 64K RAM board every time you need another 64K of memory? No choice? Read on...

TELETEK's new 16K-256K RAM is available **NOW**. Get the memory capacity you need now with expandability features you want for multi-user applications later.

The basic board is a 64K RAM bank-select unit which comes with 4116's in place. It can, however, use any of three RAM devices-4116's, 4516's, or 64K chips. *The board is field-expandable by your technicians to as much as 256K of memory.*

## FEATURES

- Fully IEEE S-100 compatible
- Deselection in 4K increments
- 4MHz operation with no wait states  
(6MHz with one wait state)
- Operates with Z80, 8080, 8085, or Alpha Micro processors
- Cromemco/Alpha Micro and Northstar bank select methods are supported

**10 MEGABYTES and MORE for the TRS-80\* Model II**  
**plus SHARED ACCESS to HARD DISK DRIVE**

**HSDS Software \$400.** (Note: HSDS now also available for CORVUS drives!!)

**INFINITE BUSINESS** (Requires Infinite BASIC) **Mod I & II \$30.00**  
Complete printer pagination controls — auto headers, footers, page numbers.  
Packed decimal arithmetic — 127 digit accuracy +, -, \*, / Binary search  
of sorted and unsorted arrays. Hash codes.

**BASIC CROSS REFERENCE UTILITY (Mod II 64K) \$50.00**  
 SEEK and FIND functions for Variables, Line Numbers, Strings, Keywords. 'All' options available for line numbers and variables. Load from BASIC — Call with 'CTRL'R. Output to screen or printer!

**DSM** **Mod I \$75.00, Mod II \$150.00, Mod III \$90.00**  
Disk Sort/Merge for RANDOM files. All machine language stand-alone package for sorting speed. Establish sort specification in simple BASIC command file. Execute from DOS. Only operator action to sort is to change diskettes when requested! Handles multiple diskette files! Super fast sort times — improved disk I/O times make this the fastest Disk Sort/Merge available on your TRS.

(Mod I Min 32K 2-drive system. Mod II 64K 1-drive. Mod III 32K 1-drive)

**GSF (Mod I & III Tape or Disk - Specify Memory Size)**

Mod I \$25; Mod II \$50; Mod III \$30

Generalized Subroutine Facilities. The STANDARD against which all other sorts are compared! And then compare prices! Machine language — fast and powerful! Multi-key multi-variable and multi-key character string. Zero and move arrays. Mod II includes USR PEEKS and POKES. Includes sample programs.

DISCAT (32K 1-drive Min)

This comprehensive Diskette Cataloging/Indexing utility allows the user to keep track of thousands of programs in a categorized library. Machine language program works with all TRSDOS and NEWDOS versions. Files include program names and extensions, program length, diskette numbers, front and back, and diskette free space.

**KFS-80** (1-drive 32K Min — Mod II 64K)      **Mod I, III \$100.00; Mod II \$175.00**

The keyed file system provides keyed and sequential access to multiple files. Provides the programmer with a powerful disk handling facility for development of data base applications. Binary tree index system provides rapid access to file records.

**MAILLIST** (1-drive 32K Min - Mod II 64K) **Mod I, III \$75.00; Mod II \$150.00**  
This ISAM-based maillist minimizes disk access times. Four keys — no separate sorting. Supports 9-digit zip code and 3-digit state code. Up to 30 attributes. Mask and query selection. Record access times under 4 seconds!!

**COMPROC** (Mod I & Mod III — Disk only) **Mod I \$20; Mod III \$30**

Command Processor. Auto your disk to perform any sequence of instructions that you can give from the keyboard. DIR, FREE, pause, wait for user input, BASIC, No. of FILES and MEM SIZE, RUN program, respond to input statements, BREAK, return to DOS, etc. Includes lowercase driver software, debounce and screenshot!

UTILITY PACKAGE (Mod II 64K)	\$150.00
------------------------------	----------

Important enhancements to the Mod II. The file recovery capabilities alone will pay for the package in even one application! Fully documented in 124 page manual! XHIT, XGAT, XCOPY and SUPERZAP are used to reconstruct or recover data from bad diskettes! XCOPY provides multi-file copies, 'Wild-card' mask select, absolute sector mode and other features. SUPERZAP allows examine/change any sector on diskette include track=0, and absolute disk backup/copy with I/O recovery. DCS builds consolidated directories from multiple diskettes into a single display or listing sorted by disk name or file name plus more. Change Disk ID with DISKID. XCREATE preallocates files and sets 'LOF' to end to speed disk accesses. DEBUGII adds single step, trace, subroutine calling, program looping, dynamic disassembly and more!!

<b>DEVELOPMENT PACKAGE (Mod II 64K)</b>	<b>\$125.00</b>
---	-----------------

Includes RACET machine language SUPERZAP, Apparat Disassembler, and Model II interface to the Microsoft 'Editor Assembler Plus' software package including uploading services and patches for Disk I/O.

# Take your pick of the litter.

When you're ready to let your computer out and introduce it to the rest of the world, one of the Cat family of Modems is the way to do it.

Take your pick. You can't go wrong. They're all purebreds—from Novation, the recognized world leader in personal communications.

## Cat Acoustic Modem

Fast, accurate, reliable originate/answer modem—with built-in diagnostics. Just add your computer and phone. Then dial up the world. \$189\*\*

## Super Mike

Replace your phone's carbon mike with Super Mike. No more carbon granule problems. Making things perfectly clear has never been so easy.

\$14.95\*\*

## Auto-Cat

Answers automatically and stores data in your computer until you're ready. The world's first LSI 103 modem. State-of-the-art, all digital, crystal controlled direct connect.

You're off the hook for under \$250\*\*

## Apple-Cat II™\*

Major breakthrough—the intelligent modem. Slips into your Apple. All auto functions, selectable baud rates, Serial RS-232 port, BSR X-10 controller\*\*\* easy-to-use self-prompting format. Other options available.

From \$389\*\* including software

## D-Cat

Get the performance and reliability of a direct connect modem (up to 20dB improvement) with the portability and price of an acoustic. Use it at home. Use it at work. Truly unique. So's the price. \$199\*\*

# Novation

uniformly interfaced on the M6800/6809 microprocessor bus. Each configuration is a complete storage system with one or more drives, an intelligent controller and a power subsystem packaged in an attractive enclosure. Also included with the system is a

host adapter to provide the bus interface to the controller. The 9670 host adapter is pin and outline compatible with the Motorola Exorciser, Micromodules and other industry standard cards. Price: \$5,295 for the 10M-byte Winchester - 1M-byte floppy configuration. Creative Micro Systems, 11642-8 Knott St., Garden Grove, CA 92641, (714) 898-9669.

**CIRCLE INQUIRY NO. 233**

**Direct connect modem** connects TRS-80 computers and similar devices directly to standard single-line telephones, using the small plug-in modular jacks with which most current telephones are equipped. The Modem I gives computer users an inexpensive method of enjoying the many over-the-phone services available, including informa-

tion networks, as well as providing a means of telephone communications with other computers. The direct connection technique

eliminates the data losses and errors that can be caused by microphonics in an acoustic coupler, which result from the bumps and noises picked up by the telephone receiver. Radio Shack, 1800 One Tandy Center, Fort Worth, TX 76102.

**CIRCLE INQUIRY NO. 234**

**FCC approved modem** is Bell 202 compatible in half duplex mode on dial-up lines. The 1200 baud unit is packaged inside each Datacorder (1 and 2), and allows it to be connected directly to the phone line. This eliminates the need for costly external modems or phone instruments. Using soon to be released versions of the Bisync and Burroughs communications programs, the unit is able to dial a pre-configured or operator entered phone number, or auto answer an incoming call. The 1200 baud options list for \$495 on both units. Inter-

national Entry Systems, 408 N.E. 72nd St., Seattle, WA 98115.

**CIRCLE INQUIRY NO. 235**

**Bi-lingual CRT terminal** is specifically designed for Arabic speaking computer environments. The Hyder Terminal 400 has the capability of switching between Arabic and Latin modes. This intelligent terminal automatically modifies Arabic characters to their proper form, dependent upon their location in the word, with diacritic composition and proportional display. The terminal is capable of displaying characters in Latin or Arabic character sets, using either the English language insertions, or English language with Arabic language insertions. Price: \$3,950. NAE Int'l., 6814 San Fernando Rd., Glendale, CA 91201, (213) 841-1302.

**CIRCLE INQUIRY NO. 236**

**Display panel**, the itron DM256X64A, consists of 16,384 fluorescent 0.4 millimeter square dots arranged in a 256 vertical-row and 64 horizontal-row configuration that fills an active display area measuring 166.15 millimeters long and 41.35 millimeters wide. It is the largest display unit introduced to date. The unit emits bright, high-resolution dot matrix images that are easy to discern from a number of feet away, and at wide viewing angles, even when subjected to intense ambient light conditions. Randomly addressable, the unit can display a multiplicity of visualizations such as: cursive and block alphanumeric messages in a variety of sizes and shapes, graphic line and filled-in area pictorializations, symbols, geometric patterns, etc.—in a number of combinations that can be scrolled from side-to-side or up-

## RAM/COBOL™ MAKES IT ACROSS!

### ... FROM ONE OPERATING SYSTEM TO ANOTHER! A VITAL WAY TO PROTECT YOUR SOFTWARE INVESTMENT FOR THE FUTURE!!

The **RAM/COBOL** language runs on more different Operating Systems and more different-sized computers than any other similar language. For starters, it runs on NCR and TI minicomputers and, in the micro field, on the CP/M<sup>®</sup>, MP/M<sup>®</sup>, TRSDOS<sup>®</sup>, OASIS<sup>®</sup>, MOASIS<sup>®</sup>, and UNIX<sup>®</sup> (ONYX version) Operating Systems... to mention only a few.

Until now, serious business software of the scope and flexibility seen in the minicomputer world has not been available on micros. **RAM/COBOL** now allows transfer of such software with a minimum of fuss.

We have participated in such a mini-to-micro transfer of a major set of general business software... using **RAM/COBOL** as the transfer mechanism, of course. Running on literally thousands of minicomputers, these refined, enhanced, and proven software packages cover A/R, A/P, G/L, P/R, Order Entry (with Invoicing and Inventory Control) as well as Sales Analysis. The packages define a new level of achievement for features and flexibility in micro applications software and offer top quality at a reasonable price.

For immediate information, call 714-848-1922 for your complete product descriptions. Be sure to circle no. indicated below.

**... PLUS ALL THE OLD, FAMILIAR FAVORITES** that we continue to offer, such as:

**General Business**—Client Accounting (CPA Write-up)  
FMS<sup>®</sup> (Financial Modeling System)  
NAD<sup>®</sup> (Name and Address System)

**Real Estate**—REAP (Real Estate Acquisition Programs)  
PMS (Property Management System)  
MLS<sup>®</sup> (Multiple Listing System)

**Health Care**—APH<sup>®</sup> (Automated Patient History)

**Word Processing and System Software**—Magic Wand<sup>®</sup>  
QSORT<sup>™</sup>  
CBASIC<sup>™</sup>

MR. SMITH, THIS SOFTWARE WILL DEFINITELY  
ENHANCE YOUR CURRENT DATA PROCESSING  
FINANCIAL INDEXING RETRIEVABILITY.

THOSE ARE  
NICE WORDS.

CIRCLE INQUIRY NO. 21

and-down—as directed by specific logic schemes. A unique double-matrix interconnections configuration—that utilizes a four lead-out per horizontal row thin-film structure (two plus leads and two minus leads) versus the single plus and minus lead-out circuitry employed for coarser spaced, older generation dot matrix arrays—enables

the display of optimum brightness blue-green images, even though the 0.4 square millimeter fluorescent dots are spaced only 0.25 millimeters apart. Noritake Electronics, 22410 Hawthorne Blvd., Torrance, CA 90505, (213) 373-6704.

**CIRCLE INQUIRY NO. 237**

**Integrated hardware/software system** converts the TRS-80 model I or III into a

communications terminal. Terminall includes all the necessary computer interfacing, audio demodulating, AFSK tone generating and transmitter keying hardware integrated in

one cabinet. This reduces equipment interconnection to a minimum and allows the operator to be on the air receiving and transmitting Morse or RTTY in minutes. Plug it into the receiver headphone jack and copy Morse code, Baudot or ASCII. Plug it into the CW key jack and send Morse code. Attach a microphone connector and send Baudot or ASCII using audio tones (AFSK). The unit comes complete with software on cassette and disk, assembled and tested hardware, and an extensive instruction manual. Price: \$499. Macrotronics, 1125 Golden State Blvd., Turlock, CA 95380, (800) 344-7493.

**CIRCLE INQUIRY NO. 238**

**Printed circuit boards**, series 100, expand memory and I/O performance of the Aim 65 microcomputer. The basic UDS-100 has two independent, baud rate selectable, asynchronous, serial RS-232-C channels and 20 independently programmable parallel I/O lines. Sockets are provided for eight 1K by 4 static RAMs and six 2K by 8 EPROMs. DIP plug jumpers allow reconfiguration for higher

density memory devices. Boards interface directly to the Aim 65 without bus buffering and can be mounted within UDSI's ACE-100 enclosure. On-board prototyping area for custom circuitry is also provided. Options include battery backup for CMOS RAM and units with RAM/EPROM included. Dimensions are 6.5 in. by 11 in. Price: \$295. Unique Data Systems, 15041 Moran St., Westminster, CA 92683, (714) 895-3455.

**CIRCLE INQUIRY NO. 239**

**I/O package** can help give the Atari computer direct ties to the real world. The four ports on the front of the computer connect directly to a PIA for use as output as well as input ports. Now Atari owners can build custom program controllers, interface to home control circuits, or use any hardware the imagination can devise. The I/O package comes with four 9-pin connectors, four 12-in. lengths of nine conductor ribbon cable, and complete instructions for their use. The documentation includes examples of home-built program controllers, how to access the ports through Basic commands, shadow registers, or directly and how to set up and address the ports for output. Order number H309. Price: \$18. Mosaic Electronics, Box 748, Oregon City, OR 97045.

**CIRCLE INQUIRY NO. 240**

**Graphics controller**, the RGB-Graph, is a 512 by 512 pixel by 4 bit single board color video display. The unit is a Multibus compatible plug-in board. Connections are provided for RGB color and monochrome video monitors, a high-speed light pen, and an expansion port (which permits additional slave RGB cards to be added for increased color and/or display resolution). The unit produces a bit-mapped display with various user selectable resolutions. Each pixel can be addressed via a pair of X and Y position registers that feature an auto-increment/decrement capability for high speed vector drawing and DMA control. The board also incorporates several advanced hardware features including zoom, shift, pan, scroll, clear, clip, mask and overlay. In addition, all video parameters, such as horizontal/vertical syncs, blanks, refresh rate, etc., are software programmable, enabling the user to drive almost any B/W or color monitor. High level graphics software packages for Z80 or 8086 based CP/M systems are available for the unit. Matrox Electronic Systems, 5800 Andover Ave., T.M.R., Montreal, Quebec, Canada H4T 1H4.

**CIRCLE INQUIRY NO. 241**

**Type ahead buffer**, model 150, is compatible with all Apple II computers and software. Featuring a 40-character type ahead capability, the unit eliminates the

## THE SMALL COMPUTER SHOWPLACE

You've heard all about them, the new generation of small computers. They're compact, easy to use, inexpensive, and tremendous worksavers.—Unquestionably the most exciting technological achievement of the decade. NOW, you can see them in the "no pressure" environment of Computer Mart's showroom. You'll be able to sit down, ask questions, see; touch; and find out exactly how to get one of these machines into your business with a minimum of trauma. There is a wide variety of systems available today, each with their own particular advantages. For example: The Prodigy One Computer by Prodigy Systems, Inc.

Prodigy One is the perfect business system for the first time computer owner. This economical system features its own library of high performance software that is easy to learn and easy to use. And when you're ready to grow, Prodigy grows with you. Modular add-ons insure that your Prodigy computer stays with you all the way. You can take comfort in knowing that Computer Mart is a one stop source for all of your computing needs (software, supplies, and consultation). And Computer Mart maintains the best staffed, small system service department on the East Coast. Small Business Computers, you've heard about them, now see them—at Computer Mart. **The small computer showplace.**

need to wait for computer prompts before entering the next command or data. Thus, it promotes a more personal Apple II computer

and provides a means for achieving maximum clerical efficiency. The model requires no software patches, cuts or jumpers. Its simplified design affords virtually effortless installation. Price: \$50. Vista Computer Co.,

1317 E. Edinger Ave., Santa Ana, CA 92705, (714) 953-0523.

**CIRCLE INQUIRY NO. 242**

**Color printer interface, Cprint**, gives your TRS-80 color a plug compatible Centronics type parallel printer port for use with all parallel Radio Shack, Centronics, Epson and similar printers. Software contained in permanent on-board memory gives transparent operation with several added features: 1) all LLIST and PRINT # - 2 output is automatically rerouted; 2) a screen-print function can be initiated at any time; 3) line width can be set; 4) the graphics in the LPVII can be accessed; 5) page length can be set, and 6) blank lines are inserted between pages. Using a parallel port, print speed is not slowed by the standard 300 baud serial interface. The module also eliminates the need to pay the \$40-100 extra that many manufacturers charge to add a serial interface to their

printers. The module is a fully buffered 8-bit I/O port that will interface with any model I/III products that plug into the printer port. An example is the Percom speech board. The unit is compatible with all versions of the color computer and uses no extra memory. Price: \$50. Micro-Labs, 902 Pinecrest, Richardson, TX 75080.

**CIRCLE INQUIRY NO. 243**

**Article surveillance system, Safekeeper**, is a low-cost, self-contained system designed to maintain control of computer tapes, printouts and other documents and detect unauthorized removal of these materials from restricted locations. The system employs the same technology as other systems used by major retailers around the world for protection against shoplifting. A tag containing an electronic chip is attached to an article, coordinated sensing devices are positioned at exits and an alarm sounds when a tagged

# The truth about computer software

The salary competition for qualified computer programmers is fearsome. Corporations, staggered by huge application backlogs, are losing the race to computerize.

To survive and maintain your company's growth, you must increase the output of your programmers. And, you must invest in proven software packages.

## The truth is... it doesn't have to cost so much.

But where can a executive, like yourself, find cost-cutting ideas, productivity-improving techniques, reviews of successful packages, and a summary of all the important software trends and breakthroughs?

SOFTWARE Magazine uniquely delivers that critical information. It is the only publication oriented to the needs and interests of top executives striving to harness and control their corporations investment in computers.

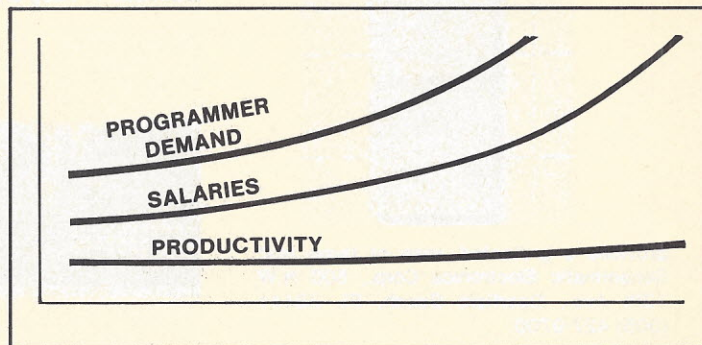

SOFTWARE is fascinating reading. Each colorful issue describes cost-cutting management techniques proven in major corporations. You meet company leaders that share their insights on problems they've solved. These personal views help you evaluate and solve your own company's computerization problems.

## Executive Briefings

SOFTWARE is written for decision makers. The magazine contains executive-level briefings on significant software trends and breakthroughs. In-depth articles provide sound, practical advice. SOFTWARE discloses how to dramatically cut the costs associated with developing computer software while improving the reliability of the finished applications. You read articles such as:

- How to Double Programmer Productivity
- Application Development Without Programmers
- Ten Ways to Stop Computer Crime
- Don't Patent Your Programs
- The New Software Revolution in the Executive Suite

A special feature in each issue takes you inside a major software vendor. You meet the people and examine the

company's strengths and weaknesses. This behind-the-scenes information gives you important facts to consider when evaluating products critical to your company's future. SOFTWARE also supplies management tips, analyses of legal issues, summaries of important news and product announcements, interviews with industry experts, and valuable software buyer's checklists.

The editors of SOFTWARE with the Advisory Board of top vendors, consultants, and authors provide you with a clear picture of the future. Any company leader concerned with escalating programmer salaries and application implementation delays must read SOFTWARE, the business tool for management.

## Save 33% off the regular subscription price!

Enter your subscription for 12 fact-packed issues of SOFTWARE at the low charter rate of \$24. If, after you have received your first copy of SOFTWARE, you find our focused management information is not for you, you can write and tell us to cancel. We will refund your entire subscription price — no questions asked.

article is detected at an exit. The system utilizes small, pliable adhesive-backed tags that adhere to any surface. The compact sensing device is easily self-installed at a door or exit area in just 10 minutes and

provides a protected zone of three feet. Sensomatic Electronics Corp., 500 N.W. 12th Ave., Deerfield Beach, FL 33441, (305) 427-9700.

**CIRCLE INQUIRY NO. 246**

**Microprocessing training module,** Omnibyte Trainer 1, is designed to guide its user from a beginner status to a comprehensive understanding of microcomputer systems. Because of its unique design, the unit is capable of growing as the user's skill develops. The training module can be easily expanded from a fundamental teaching unit to a complete disc-based system. At the heart of the 2-board system is the OB8001A single board computer. The OB8001A is built around the MC6808 CPU, and has 1¼K of onboard RAM, provisions for up to 4K PROM, onboard I/O capability, and is compatible with all

Omnibyte I/O and memory boards. When unplugged from the trainer interface board, the OB8001A will function as a stand-alone computer, or can be used to control a complete microprocessor system. The trainer interface board features a large 8-digit display, LSI keyboard encoder, separate command/data keys, and a hexadecimal keypad with positive tactile feedback. A TBUG 2K-byte monitor program

and hardware trace circuitry gives the user complete control over the system. Prices range from \$349.95 to 526.45. Omnibyte Corp., 245 W. Roosevelt Rd. (I-5), W. Chicago, IL 60185, (312) 231-6880.

**CIRCLE INQUIRY NO. 248**

**High speed shredders** eliminate stacks of continuous forms quickly and efficiently. Destroyit Data 16-in. shredders include standard and economy models. The standard model with 1½ H.P. motor is the fastest machine of its size, devouring over 100 ft. of continuous forms per minute or a stack of 30

letterheads. The economy model with 1¼ H.P. motor is approximately 20% slower. These shredders look alike and each comes

with the same super strong 3 shelf metal stand for faster, more convenient feeding of multiple stacks of continuous forms. An easily attached, oversized shred-bag holds a huge volume of shredded material. These machines are easily moved on large casters and can be brought to the work where they perform quietly and efficiently, destroying unending amounts of obsolete documents, papers and forms. Electric Wastebasket Corp., 145 W. 45th St., New York, NY 10036.

**CIRCLE INQUIRY NO. 249**

**Printer interface option** connects to IPS-5000 and IPS-5000-A intelligent dot matrix units. The integrated RS-232 serial communications combines the serial function with a buffer capacity of 1K, 2K or 4K of RAM on one I/O board. The unit incorporates individual microprocessors to transmit and handle X-ON/X-OFF communications protocol; this construction also gives more flexibility for

## Peachtree Software™ Announces

# SALES TRACKER™

**S**olved! The case of ineffective business control. Now Sales Tracker microcomputer software gives business managers unprecedented control over lifestream activities.

You get ANSI COBOL, floppy and hard disk support, and a modular format that lets you install packages as you need them. And look at these outstanding features.

**Accounts Receivable:** Multiple companies on one disk. Nine selectable reports including G/L sales and receivables, customer classes, and sales tax routines.

**Sales Analysis:** Reports by salesman (with commission), product class, inventory item, customer, item by customer, and customer by item.

**Order Processing:** Handles multiple shipping locations, automatic discounting, partial shipments, back orders, demand invoicing, full order status and maintenance.

**Inventory:** Multiple companies on one disk; reports by class, warehouse, price level and quantity break; automatic price updating; maintains items optionally by case, lot or serial number.

**C**lues to why Sales Tracker is so easy to use? Excellent documentation, sample data files, conversant menu-driven programs, and standardized formats. For information call 800-835-2245 ext. 35 (Kansas, 800-362-2421, ext. 35)

unique or future printing/communications applications. The unit accepts data at rates up to 9600 baud. Installed inside the printer, the integrated board connects to the main board via the 20-pin interface board cable. Price: \$150. Dataroyal, 235 Main Dunstable Rd., Nashua, NH 03060, (603) 883-4157. **CIRCLE INQUIRY NO. 250**

**Graphics conversion unit**, the Xcel, allows Z-89/H-89 and Superbrain microcomputers to display 16K pixel graphics with 512 by 240 lines resolution. The low cost unit can be installed in less than one half hour and allows full memory capability of the host processor to remain intact. Graphics video is independently controlled and overlays normal processor video. The user may select normal video or graphics video or both to be displayed via a three way switch. Available software packages include Symbol Generator, Graph Plotter, 3D Generator, Surface Plotter and Graphics Terminal Emulator. Martek, 2908 Oregon Ct., G-3, Torrance, CA 90503, (213) 320-6604. **CIRCLE INQUIRY NO. 251**

**Touch screen digitizers** enable untrained personnel to gain access to computer data by simply touching a computer display with a finger. The touch screens eliminate fixed-function keyboards with awkward light pens, permitting the operator to devote his attention exclusively to the display. The screen's high resolution also permits the entry of graphic data. The screens can be easily retrofitted to existing displays. In most cases, no modifications to the displays are necessary. The digitizers consist of a thin transparent curved panel that mounts in front

of a standard 12 or 15 inch CRT display monitor and an electronic board that is connected to the panel with a cable. When the panel is touched, the location of the touch is measured and sent to a host computer as a RS232C message. The digitizer thus acts as a data entry device, replacing a keyboard or graphic tablet. Prices: \$650 for 12-in. model (TF-12)P; \$700 for 15-in. model (TF-15)P. TSD Display Products, 35 Orville Dr., Bohemia, NY 11716, (516) 589-6800. **CIRCLE INQUIRY NO. 253**

**Intelligent interface unit** allows read-only video disks to be controlled from a computer's keyboard. The interface unit is 6802-based. The UIE (universal external interface) will be available in two versions for either serial RS-232 use of IEEE 488 bus-based systems, and operates with any micro-

computer have such capabilities. A typical implementation would include, besides the UIE, a microcomputer with keyboard and video terminal, the DiscoVision player, and a TV monitor. SSM Microcomputer Products,

2190 Paragon Dr., San Jose, CA 95131, (408) 946-7400. **CIRCLE INQUIRY NO. 252**

**Cleaning kit**, Vari-Clean, has been designed for the small computer user, the word processing user or the terminal user. It contains components to clean all of the various components of a user's system, from the CRT screen, to the printer, to the heads of the magnetic peripherals. It even contains an anti-static spray that, when

applied to carpeting, reduces static electricity in extremely low humidity conditions. Price: \$40. Innovative Computer Products, 18360 Oxnard St., Tarzana, CA 91356, (213) 996-4911. **CIRCLE INQUIRY NO. 244**

**Digital cassettes** have been selected and certified for storing twice the normal bit density. Each cassette is certified for 0 errors at 3200 fci (1600 BPI) and is guaranteed to remain that way for one full year. To complement this line, MIS will also supply pre-record

## CAT-100 FULL COLOR GRAPHICS

**Complete line of color imaging systems with high resolution real time video FRAME GRABBER for the S-100 bus.**

Capture and digitize a video frame in 1/60th of a second. Store up to 2 million bits of image data in on-board buffer. By software, select the best resolution for your application from 256 to 1280 pixels per TV line. Display your digitized image or your computer processed image with up to 256 gray levels or 65,536 simultaneous colors on standard B/W, NTSC or RGB color TV monitors.

CIRCLE INQUIRY NO. 247

**Peripheral controller**, model PC-2, is a versatile interface unit that provides an economical means to cluster up to six CRT or printing terminals on a single port, or up to six CRTs on a single hard-copy printer. The unit operates on the principle of contention logic. When it is used as a terminals-to-computer interface, the press of a button at any one of the input terminals logically connects that terminal's communications lines to the computer port, and logically excludes the other terminals. Another press of the button frees the computer to be accessed by another terminal. An LED (one at each terminal) indicates the particular unit that has access to the computer. The terminal communication lines are logically connected to the printer and X On/X Off, suspend/resume codes can be sent from the printer to the selected terminal. The bi-directional model PC-2 replaces the earlier PC-1 that performed only the CRTs-to-printer function. The unit operates on either 120 or 240 volts, 50 or 60 Hz and consumes 7 watts of power. It measures 3 by 5 1/4 by 10 3/8 in. (76 by 133 by 262 mm) and weighs 2.2 lbs. (1 kg). Price: \$375. Teleray, Box 24064, Minneapolis, MN 55424, (612) 941-3300.  
CIRCLE INQUIRY NO. 254

**Alphanumeric printers** print 21 or 32 columns of alphanumeric characters first-line-up like you normally read. The internal microprocessor provides these DigiTec printers 6430 and 6470 with enhanced

operational and interface capabilities. Both models permit switch selectable serial or parallel input interface. Serial input may be RS-232C or optically isolated 20 mA current

loop at selectable 110, 300, 600 or 1200 baud. Parallel interface is the 8 bit parallel, character serial, bus system at up to 2000 characters/second. All interfaces respond to the popular ASCII input format. The 36 character input buffer will initiate automatic print at buffer overflow. Price: \$399. United Systems Corp., 918 Woodley Rd., Dayton, OH 45403, (513) 254-6251.  
CIRCLE INQUIRY NO. 255

**Bi-directional dot matrix printer** serves data processing requirements with speeds of up to 165 characters per second in a 5 by 9 dot matrix. For document preparation requirements, the model 165 features a word processing font that prints at 90 characters

per second in a 10 by 9 dot matrix. Model 165 comes in woodgrain and solid finishes and is recommended both for commercial and personal computer applications. Price: \$2,295. Malibu Electronics Corp., 2301 Townsgate Rd., Westlake Village, CA 91361, (805) 496-1990.

## The Ultimate Application Development System

Nothing can compete with the brain when it comes to information storage capacity and speed of data entry and recall — but we're working at it.

Our **SELECTOR-IV™** data base management system will let your microcomputer operate with the flexibility available (up to now) only in larger systems. You can create, maintain and report on files limited in size only by your \*CP/M™ compatible operating system or disk storage capacity.

The basis of the power of **SELECTOR-IV™** is our unique method of cross-indexing the information in your files. You can immediately call records by the contents of any piece of information required — from account numbers to ZIP codes to the date of your last audit. You can update records, individually or all at once. You can create new, uniquely, selected sub-files from existing ones (in the same or a different format), and perform computations in the process. You can fine tune procedures to generate computed invoices, personalized letters, or gummed labels with the information coming from several files at once, and invoke them whenever needed. You can add new files to a record definition and change or delete them at will.

We've come a long way since we released the first information management system in microcomputers. We've listened to your suggestions and incorporated the best of them. We've built screen editing functions into the system which make operating the system as convenient as possible. We've had **SELECTOR-IV's™** documentation produced by our experts emphasizing its use for the novice, the applications developer, as well as, the retailer. Our applications specialists can provide you with a "turnkey" **SELECTOR-IV™** system customized for virtually any requirement.

With **SELECTOR-IV™** and a good word processor program, chances are you won't need any other software.

**Look for SELECTOR-IV™ at your local computer retailer, or call:**

**MICRO•AP, INC.**  
**7033 Village Parkway**  
**Dublin, CA 94566**

**Automatic optical card reader**, Micro Mark II, is a low cost high speed data and program statement entry peripheral. Ideal for the education or personal computer market,

the units accept and read both marked (number two pencil) and punched cards. With a serial interface, price is \$1,200; with a parallel interface, \$1,500. True Data Corp., 17092 Pullman St., Irvine, CA 92714.

**CIRCLE INQUIRY NO. 260**

**Graphic software** allows the user to dump the contents of the high resolution pages (options for page 1 or page 2) out to the new Centronics printer, model 739 to obtain hard copy graphics. The options for printing are presented in menu fashion. The user must know what type of printer interface card is being used and which slot number it is in. The five types of interface cards which are supported are listed on the beginning menu. The printer interface card is standardly placed in slot #1 of the Apple II (or Apple II Plus) but the software may be set to use any of the slot numbers except #0. Used in conjunction with Apple Plot, the user may obtain hard copy of business plots as well as anything that may be loaded to the high resolution page of the Apple II or Apple II Plus computer. Price: \$44.95. Computer Station, 11610 Page Service Dr., St. Louis, MO 63301, (314) 432-7019.

**CIRCLE INQUIRY NO. 261**

**Applications package** for the TRS-80 model III, Business Data Base, offers the user the dual benefits of an electronic worksheet type program (without the constraints of fixed RAM storage) and a general purpose data base and storage system. The package allows the creation of indexed data bases composed of either alpha-numeric or numeric data. The data can be filed, sorted and edited at will. Numeric data can be arranged into programmed formulas in order to develop financial forecasts, balance sheets, income statements or special financial reports. The data base can be organized in a random form, yet reports can be extracted under user control of elements and cells. The system is programmed for use in inventory control, payroll, accounts receivable, accounts payable, or general ledger applica-

# T/Maker II:™ it does a number on VisiCalc!™

VisiCalc is a fine aid for the computation of numerical problems. But it does have two major limitations: it is available only for a small number of systems, and its use is limited strictly to numbers, not words. To overcome these substantial limitations, Lifeboat Associates introduces T/Maker II.

Unlike VisiCalc, T/Maker II is designed to run on most small business computers with CP/M® or similar operating systems and a video terminal with cursor addressing capabilities. And soon there will be T/Maker II versions available for UNIX,™ RT-11™ and other systems.

**Works with words as well as numbers.** Like VisiCalc, T/Maker II reduces the manual tasks involved in computing and calculating financial documents. But since most business problems and reports involve words as well as numbers, T/Maker II also functions as a full-screen text editor for word processing.

T/Maker II is the most advanced aid for the analysis and presentation of numerical data and text material. In a matter of minutes, an entire document—including all edited text, all figures and all calculations—can be created, reviewed on your screen and reported in printed form.

T/Maker II turns your small business computer into a powerful, sophisticated and convenient tool. A tool that will save you money, time and energy, and eliminate the need for costly time-sharing.

With T/Maker II you can easily perform an unlimited number of analytical and reporting tasks which integrate numerical and text processing. You'll find T/Maker II perfect for such things as:

- Financial Statements
- Statistics
- Profitability Reports
- Revenue and Expense Analyses
- Portfolio Evaluations
- Price Lists
- Rate Structures
- Expense Accounts
- Cash Flow Projections
- Checking Account Reconciliations

...and much, much more.

**Easy to learn and use.** You don't have to be a programmer to operate T/Maker II. Just follow T/Maker II's easily understood and ordered instructions, set up your data in

rows and columns, define the relationships and T/Maker II will do the rest: it will perform the computations and formatting necessary to prepare your document. When you're finished you can analyze your report on your screen or store it on a diskette. Or, you can have the report printed with presentation quality.

And when any changes have to be made, simply enter the new figure or relationship and tell T/Maker II to adjust and recalculate all the new results.

**Editing capabilities.** As a full-screen editor for word processing, T/Maker II handles text up to 255 characters wide. It includes features like text formatting and justification, centered titles, a text buffer for block moves and repeated inserts, global search and replace commands for printing your letters, reports and documents. Wide documents are supported by horizontal scrolling.

**Low cost.** The cost of T/Maker II is only \$275 plus shipping and handling. Dollars well spent once you consider all the time, energy and money it can save. T/Maker II is brought to you exclusively and supported completely by Lifeboat Associates, world's largest computer software publisher. For more information send us the coupon below.

Mail coupon to: Lifeboat Associates, 2212  
1651 Third Ave., NY, NY 10028. Or call (212) 860-0300.

- ☐ Please send me more information on T/Maker II.
- ☐ Please send me a free Lifeboat Catalog featuring over 200 programs, including integrated accounting and professional practice systems, office tools for bookkeepers and secretaries and sophisticated tools for programmers.

**Lifeboat Associates**  
Software with full support

tions. Features include long fields, special report generation, and automatic recalculation of all formula related data. Price: \$90. Charles Mann & Assoc., Micro Software Div., 55722 Santa Fe Trail, Yucca Valley, CA 92284, (714) 365-9718.

**CIRCLE INQUIRY NO. 262**

**Accounting packages** for the Motorola 68000 system consist of general ledger, accounts payable, accounts receivable, order entry, purchase orders, and inventory control. The system uses transaction files to update the general ledger from transactions entered in any other sub-system. With 1/2M byte of floppy the system will support 600 inventory items on the Altos, PDP-11, and Western Digital Microengines. Each additional 1/2M byte gives an additional 1000 items. Even in small systems you can have two to three hundred GL accounts, many customers and many vendors. There is essentially no limit on the number of transactions, even in the smaller systems. Al Petry, P.S. Inc., P.O. Box 2017, Fargo, ND 58107.

**CIRCLE INQUIRY NO. 263**

**Operating system** from Oasis is available for the Altos ACS8000-10 and ACS8000-10/MTU microcomputers. The combination allows flexibility in maintaining public, private or shared files with versatile user security and accounting controls on the Z80 based systems. File locking and automatic record locking insure data integrity for up to four users on the standard system. Archive and Restore—back-up utilities—support Altos 10M-byte Winchester, single 8-in. floppy disk drive, or alternative DEI 1/4-in. streaming tape unit. Multi-user spooler, inter-user communication capabilities and general purpose text editor are also included. Program development support offered includes: high level Basic compiler and interpreter; powerful EXEC JCL; text editor and script processor; relocating macro assembler/debugger/linkage editor; and diagnostic/conversion programs. Price for Oasis option: \$500 for single-user and \$850 for multi-user versions. Phase One Systems, 7700 Edgewater Dr., Suite 830, Oakland, CA 94621, (415) 562-8085.

**CIRCLE INQUIRY NO. 264**

**Data base management system**, Pegasus, allows the user to create files, input data, query database, print reports and select subsets. It runs on UCSD Pascal operating systems and is available for the Apple II computer. Powersoft, Inc., P.O. Box 157, Pitman, NJ 08071.

**CIRCLE INQUIRY NO. 265**

**Key-file access utility**, PFAS (Pascal File Access System) version 2.0, is a set of routines written in Pascal, allowing users to write programs that access records by key. PFAS is a set of routines distributed either as a UCSD Pascal p-code unit or as a set of Pascal MT+ modules that are linked to the user's program to provide key file access capabilities. PFAS allows programmers to make new files, add records either sequentially or randomly by key, read records randomly by key or partial key and read records in key-sequential or reverse key-sequential order starting with any record in the file. When records are deleted, PFAS reuses the freed-up space. Since it uses a B+ tree to index the records, the file never needs to be reorganized. Added features

include the support of any number of secondary key files and variable length records. In addition, the program using the PFAS routines now specifies a buffer area to be used as a disk record pool to reduce access times. The user-specified buffer pool results in a two-fold speed improvement. PFAS is available on an 8-in. soft sectored single density or an Apple II 5 1/4-in. floppy disk. A single-site license costs \$200 and the documentation is available for \$15. C.J. Wigglesworth Software, P.O. Box 755, Cardiff, CA 92007.

**CIRCLE INQUIRY NO. 266**

**Disk interface cards** are designed to control 7.1 Mbit/sec 14-in. Winchester technology drives (models 4004, 4008, 4100). The FDC4000 is capable of controlling one unmodified or up to three slightly modified drives in any combination for a maximum unformatted storage capacity of 174M bytes per card. Logically, up to 32 cards may be addressed in a single computer system. Onboard the controller is 1K static RAM

buffer, with which high speed DMAs are performed. Since the buffer is I/O mapped, no memory space is used and no wait states are generated. The support software is provided as a set of Z80 assembly language drivers, which includes a skeletal CP/M 2.2 BIOS and a skeletal MP/M 1.1 XIOS. These drivers are provided on CP/M compatible IBM standard 8-in. floppy disk. Price: \$895. PCE Systems, 5232 Manzanita Ave., Carmichael, CA 95608, (916) 338-5454.

**CIRCLE INQUIRY NO. 267**

**Graphics display terminal**, the HP2623A, features a high quality display and an optional built-in graphics printer. It is well-suited to both business and technical display graphics, as well as some design applications. The 512 by 390 dot screen resolution produces an image that is bright and easy to read even in brightly lit rooms. The 2623A can draw vectors at up to 9600 baud and can be

selectively updated without erasing the entire display. Increased throughput and improved system response time result.

# Move Up to Tarbell

## The Serious Business Machine

Do you have a small computer system that operates with mini-floppies and has limited storage capacity? Then it's time to move up to the Tarbell Empire Series System. Tarbell starts where small systems leave off, providing storage from 1 to 20 megabytes. This means Tarbell is capable of growing right along with your business. (It also makes sense to start with Tarbell if you're a first-time computer buyer.)

Tarbell is the serious general purpose business machine, backed by years of experience with disk systems. It gives you word processing, inventory control with bill of materials, mailing lists — all in addition to accounting applications: general ledger, payables, receivables, payroll with cost accounting and order entry. Whatever your need may be, Tarbell can provide the working software that gets the job done.

With the Tarbell System you get a Z80 4 Mhz CPU with memory management, timer and full interrupt capability, 2 RS-232 serial ports with handshaking, 64 K bytes of random-access memory, double density floppy disk interface, 2 double density floppy disk drives, cabinet, power supply, and cables.

The software includes: CP/M™ 2.2 disk operating system, Tarbell Disk BASIC, Tarbell Database System, and all manuals and documentation.

Tarbell also offers the MP/M™ Multi-User Operating System and 4 additional RS-232 serial ports.

The Tarbell Empire Series is delivered assembled, tested, and with a FULL six-month warranty on parts and labor.

And when you need even more mass storage, Tarbell also has a hard disk that's system-compatible and provides easy back-up.

If your business is growing or you need more than a few hundred K bytes — it's time to move up to Tarbell. Call your local Tarbell dealer for competitive prices.

CP/M and MP/M are trademarks of Digital Research

Graphic and alphanumeric memories are independent and prevent system messages from interfering with the graphics application. Local graphics text composition and user-defined area shading are provided for greater user convenience. Graphics text composition enables a user to add text such as graphic labels and titles directly to the image before printing a hardcopy. Graphics text composition is supported in English, Swedish, Finnish, Danish, French, German and Spanish. The HP2623A is supported on HP's business-oriented graphics software DSG/3000 and the technically oriented Graphics/1000-II. It is also compatible with other third-party software packages, including Tektronix's Plot 10 software for the Tektronix 4010/12 display terminals. Price: \$3,750. Hewlett-Packard, 1501 Page Mill Rd., Palo Alto, CA 94504.

**CIRCLE INQUIRY NO. 268**

**Operator efficiency** is emphasized in the Ergo 3000. The detached, low profile key-

board contains an integrated palm rest and seven LEDs to indicate terminal status. In

addition, the monitor module houses a green, non-glare screen, and tilts a full 25° to accommodate any viewing angle. The terminal is fully code compatible with DEC VT-100 and offers 132-column display, scrolling regions, and double high, double wide characters. Also standard are an advanced video package, current loop and VT52 printer port. A VT-100 printer port with editing is optional. The standard unit lists for \$225. Micro-Term, 1314 Hanley Industrial Ct., St. Louis, MO 63144, (314) 968-8151.

**CIRCLE INQUIRY NO. 269**

**CRT terminal** is functionally equivalent to the Data General D200 at a 35% lower price. The terminal is designed with the operator in mind, featuring a sculptured key cap set for ease of entry, a green phosphor display for reduced eyestrain, a tilting screen and separate numeric key pad. Another standard feature is a printer port that operates under

program control or from the keyboard. It has two modes, page print of data displayed on the screen, and pass-through operation,

which allows data from the CPU to bypass the screen and be transmitted directly to the printer. Price: \$1,250 in single quantity to end users. Emulog, 3730 Yale Way, Fremont, CA 94538, (415) 490-1290.

**CIRCLE INQUIRY NO. 270**

**Green and amber CRTs** at 15 in., present a display area 30% larger than standard 12-in. units, which gives the user a significant readability advantage. Green and amber screens are easier to read for longer periods of time than black and white screens. The terminals are designed with an 18.6kHz horizontal video scan rate. CRTs are available

in models 10 (single-page editor), 11 (APL/ASCII), 12 (two-page editor), 14 (extended memory, interactive) and 100 (132-columns, with non-volatile programmable functions). Add-on quantity-one prices for the 15-in. green and amber options are \$200 and \$215. Teleray, Box 24064, Minneapolis, MN 55424, (612) 941-3300.

**SYSTEM REQUIREMENTS**—All software requires a CP/M operating system as well as indicated requirements listed below:

1. RECOMMENDED SYSTEM—CP/M 1.4 OR HIGHER, 48K MEMORY, 200K DUAL DISKS, 24 x 80 CURSOR ADDRESSABLE TERMINAL, 132 COLUMN PRINTER
2. 48K MEMORY OR HIGHER
3. 56K MEMORY OR HIGHER
4. 64K MEMORY OR HIGHER
5. CP/M 1.4 OR HIGHER
6. CP/M 2.0 OR HIGHER
7. BASIC-80 (MBASIC) 4.51
8. SIGNED LICENSE REQUIRED BEFORE SHIPMENT
9. CURSOR ADDRESSABLE TERMINAL
10. CP/M SERIAL # REQUIRED
11. SPECIFY Z80, 8080, OR CDOs
12. SUPPLIED IN SOURCE CODE
13. COMPATIBLE WORD/TEXT PROCESSOR
14. BASIC-80 (MBASIC) 5.0 OR HIGHER
15. MUST SPECIFY HOST APPLICATION LANGUAGE
16. REQUIRES Z80 CPU
17. PRICE INCLUDES TWO CONFIGURATIONS

CP/M IS A REGISTERED TRADEMARK OF DIGITAL RESEARCH  
Z80 IS A REGISTERED TRADEMARK OF ZILOG INC.  
TRS 80 MODEL II IS A REGISTERED TRADEMARK OF TANDY CORP.  
™ DESIGNATES NAME IS TRADEMARKED BY MFG.

**Winchester-based system**, the Chieftain 98W30, houses a 30M-byte 8-in. disk drive. The system is configured around the 6809 processor and runs at full 2MHz operation.

The system uses standard back-up of 1M-byte 8-in. double side, double density floppy. A 20M-byte tape streamer can be integrated for backup at the users option. The system runs the Unix-like OS-9 multi-user, multi-tasking operating system. A standard system incorporates 32K of RAM—expandable up to 1M byte for applications that require large amounts of RAM, such as level II of the OS-9 multi-user series. The DOS69D single-user operating system comes standard. Price: \$9,995. Smoke Signal Broadcasting, 31336 Via Colinas, Westlake Village, CA 91361, (213) 889-9340.

CIRCLE INQUIRY NO. 272

**Technical desktop computer**, MPT/100, can be used for program development in Fortran IV, Basic, Pascal and assembly languages, with the MP/OS operating system. Applications include engineering and scientific computations, laboratory automation, medical diagnostics, data acquisition and process control, numerical control and remote data entry. The system is a member of the MPT family of 16-bit desktop computers. It has 64K bytes of local memory and 716K bytes of minidiskette storage in a compact desktop

package. For ease of use, it has a 12-in. green phosphor video screen, 83-key keyboard and two 5 1/4-in. floppy diskette drives. The system has two RS232-C programmable sync/asynch ports. Combined with extensive software, languages and utilities, this provides the capability to emulate most industry-standard communication protocols. Software utilities include linkers, editor, debugger, and file transfer programs. Price: \$5,350. Data General, Route 9, Westboro, MA 01581, (617) 366-8911.

CIRCLE INQUIRY NO. 273

**Multi-user system**, the Mariner series, is a modular system that uses 8-bit technology. Instead of funneling all system functions through a single processor, each user is

## ALTOS COMPUTER SYSTEM

Now a system truly suited to grow with your business. Start with a single terminal system and enlarge up to 4 users. You've heard about what they can do, wait 'til you hear what we sell them for. **CALL TODAY!**

## NEC PC-8000 MICROCOMPUTER SYSTEM

Not an apple lover? Check out the new NEC PC-8000—it combines the most wanted features of several leading microcomputers, together with a few wonders of its own. Go see it today, then call us tomorrow for pricing, you just might be surprised.

TERMS: Shipping: add 3% for product shipped within continental USA via UPS surface (minimum \$3.00). If the Order placed is prepaid with U.S. funds in the form of check or money order, a Total Charge of \$3.00 for shipping is all you pay within the continental USA via UPS surface. Allow 14 working days for personal and company checks to clear. Credit card charges limited to \$1000. No COD's. FPO, APO or orders outside continental USA call or write for shipping charges or add 10% to purchase price (any difference will be refunded). California residents add 6% sales tax. All offers subject to change or withdrawal without notice. Warehouse: 20695 S. Western Ave., #124. Visitors by appointment.

allocated a separate satellite processor card with a Z80A and 64K bytes of RAM. The

independent satellites are linked in the system via an S-100 bus to the mass storage devices and other peripherals. A master

processor oversees system operation and arbitrates bus usage. The system easily handles up to eight on-line users. The single cabinet can be configured with one or two single- or double-sided floppy drives for a capacity of up to 2M bytes and an 8-in. Fujitsu Winchester hard disk drive with 21M-byte capacity. Back up for the hard disk is provided by a 1/4-in. streaming tape drive. The system measures 29 in. high, 14 in. wide and 20 in. deep. It can accommodate either 110V, 60 Hz or 220V, 50 Hz power sources. Single-user system prices start at \$4,500. Micro-mation, 1620 Montgomery St., San Francisco, CA 94111, (415) 398-0289.

CIRCLE INQUIRY NO. 274

**Compact computer**, Findex, packs all the performance of a complete microcomputer system into a package that weighs only 31

pounds and is no bigger than most electric typewriters. It combines memory, a keyboard, a display, a disk drive and a printer in an enclosure that can be carried easily from place to place. The powerful computer, with a memory capacity of up to 2 million characters on minifloppy diskette drives, interfaces to a variety of outside peripherals, like larger printers or multiple hard disk drives. It has

I/O expandability: serial, parallel and S-100 bus interfaces are standard; American (Bell 103) and European (CCITT) acoustic couplers are optional. It supports a variety of high-level languages, including Business Basic, Cobol, Fortran, Pascal, APL and PL-1. And a wide variety of applications software is available including a patient accounting system for medical offices. The unit sells for \$6,980-20,000, depending on peripherals and software. Findex, 20775 S. Western Ave., Torrance, CA 90501, (213) 533-6842.

CIRCLE INQUIRY NO. 275

**CPU based computer**, the OB68K1, is a powerful 16-bit CPU single-board unit capable of functioning as a stand-alone system, or as the central processor card in a large micro-computer system. The board can be ordered with either 32K bytes or 128K bytes of

RAM, eight sockets for up to 64K bytes of EPROM (any combination of 2716, 2532, or 2564s in pairs), seven prioritized-vectorized interrupts (including one non-maskable interrupt), and a 16MHz crystal controlled clock (8MHz processor clock). Other features include two RS232C serial ports, two programmable 16-bit parallel ports, a crystal controlled baud rate generator with 16 standard rates (50 to 19.2K baud), one triple 16-bit programmable timer/counter, and user programmable memory mapping PROMs. Prices range from \$1,495 (32K RAM) to \$1,995 (128K RAM). Omnibyte Corp., 245 W. Roosevelt Rd., W. Chicago, IL 60185, (312) 231-6880.

## Computer Language Reference Guide

by H. Helms, Jr.

Howard W. Sams, Indianapolis, IN

Reviewed by David Marca

This small language reference book strives to cover the most common and general aspects of seven different computer languages. The primary goal of giving the reader a general familiarity with each language is met. There's good content in this package, and it also contains a keyboard dictionary.

The book presents most of the widely-known computer languages: Algol, Basic, Cobol, Fortran, Lisp, Pascal and PL/I. The exposition of each language is as consistent as it could be, due to the wide differences in philosophy. The book was not designed to be a tutorial—it is a reference guide.

For those who need information to understand a program presented in a magazine article, for instance, this book is a useful tool. It is ideal for the novice who does not wish to spend large amounts of time learning many other languages, but still has a frequent need to read different kinds of software.

## The Microelectronics Revolution: A Complete Guide to the New Technology and its Impact on Society

Edited by Tom Forrester  
MIT Press, Cambridge, MA

Reviewed by Bernard Conrad Cole

If you've been giving some serious thought to the overall impact of microelectronics and microprocessors on society, this is the book to read.

The aim of this anthology is to collect the most significant articles published in the popular and business press over the last five years. It is to Forrester's credit that the book comes close to staying on target.

The book is organized into three sections; the first dealing with the technical aspects of the revolution, the second with its economic impact in industry and the office (and the consequences for employment) and the third with development of the information society.

Key articles include those by industry leaders such as Robert Noyce of Intel and business journalists such as Gene Bylinsky, as well as social theorists and futurists such as Daniel Bell. Especially useful are the guides to further reading at the end of each chapter, which include not only listings of other key papers, but comments by the editor summarizing each article and its significance.

589 pages \$12.50

## Without Me You're Nothing: The Essential Guide to Home Computers

by Frank Herbert, with Max Barnard  
Simon and Schuster, New York, NY

The man who brought mysticism back to science fiction with his Dune novels has gone a long way toward removing mysticism from computers—as well as books about computers.

This is a readable and enjoyable primer for computer beginners. While its content is neither more nor less complete than other similar guides, it is certainly one of the most imaginative and well written examples.

The most interesting aspect of the book is a new approach to programming based on a new kind of flow chart that the authors call PROGRAMAP. According to the authors, the object is to provide a smooth transition from outline to program. As a top-down approach to programming, it attempts

## THE BEST KEEPS GETTING BETTER

Each month more new and exciting Peripherals and Software are introduced for the Apple II to keep it the very best personal computer you can buy. And each month A-VIDD Electronics continues to be the best place to purchase your Apple. Why? Low prices, of course. But even more, a large inventory of Apple Computers and Peripherals, most all the popular Software, prompt shipping and efficient handling of your order and informed, helpful salespeople. Whether you shop by phone or mail or stop in at either of our two Southern California locations, let us show you the best of both worlds —

# The finest Data Base Manager Available

## Maxi Manager

The jury is in and the verdict is . . . "outstanding!" Reviews from all of you who purchased MAXI MANAGER (not to mention raves by many top microcomputing magazines) have heralded it as the definitive data base managing system. We knew that business owners and hobbyists demanded the finest data base managing system available. To all of you who praised us for MAXI MANAGER, we extend our thanks. And to those of you who have yet to try MAXI MANAGER, we invite you to experience this incredible system today. But don't take our word for it (or our jury's). Judge for yourself.

**TOLL FREE ORDER LINE (800) 327-7172**

### JUST CHECK SOME OF THESE FEATURES

- Supports six different relational search techniques.
- Comes with programmer's interface.
- Over 120 pages of documentation.
- Supports up to 20 user defined fields of 40 characters each.
- Record length up to 800 characters.
- Files can be up to four disks in length.
- Compatible 35, 40, 77 & 80 track drives with proper operating system.
- Has calculated equation fields.
- Complete report generator.
- Works hand in hand with any word processor.

**\$99.95**

MODEL 1 version requires TRSDOS 2.3 and is compatible with NEWDOS 2.1 & NEWDOS 80  
MODEL 3 version comes on TOS, a special version of the DOSPLUS operating system.  
Requires 48K of RAM and one disk drive minimum.  
For the TRS-80 Model 1 and 3.

## BOOK REVIEWS

to get the user to visualize the problem first, write it down in the graphic symbols of PROGRAMAP and then translate it to the specifics of programming languages. It is a very interesting concept and worth another book.

—BCC

304 pages \$14.95

### Techniques of Basic

by John P. Grillo and J.D. Robertson  
Wm. C. Brown Co., Dubuque, IA

Reviewed by Rocky Smolin

This book is for those who have overcome their fear of programming, have become familiar with the rudiments of Basic, and require an easy-to-use guide to the language. Although less suited for a step-by-step hand-holding type of teaching manual than some other books on the market, it is unsurpassed as a reference manual.

The first few chapters proceed as one would expect—decision and branching statements, functions (DIM, STRINGS, etc.), input and output commands, and a discussion of variable types. Included is an extensive presentation of the graphic capabilities of Basic.

The next section explores the world of the disk and those extensions of Basic one finds only under versions of disk Basic (MID\$, TIMES\$, DEFUSR, and the like). Both sequential and direct access file processing methods are presented in detail and should unravel many of the mysteries of disk Basic programming.

In addition to these rather standard subjects, the authors have included several unique but valuable topics. Chief among these are conversational programming techniques, which make programs easier, friendlier, and more enjoyable to use. The chapter on structured programming should probably have been placed at the beginning of the book to emphasize the importance of these techniques in writing better, more maintainable programs in less time. A real surprise was the chapter on documentation—a topic of critical importance almost universally ignored by computer books.

The book is liberally illustrated, uses a large print format, and has a comprehensible style. It is highly recommended.

256 pages \$18.95

### Microsoft Fortran

by Paul M. Chirilian  
Dillithium Press, Beaverton, OR

This comprehensive guide to Microsoft Fortran is valuable as a self teaching text, as well as a desk reference. It is intended for readers with no experience in Fortran. In addition to a thorough examination of the language, the book employs and teaches the techniques of structured programming. The novice not only learns Fortran, but also gets the benefit of some valuable programming disciplines.

By the time the reader has finished the first chapter, he will be able to write simple programs in Fortran. The rest of the book proceeds in a logical manner, covering arithmetic operations, input and output statements, control statements (IF, GOTO, DO, etc.), looping operations, arrays and subscripted variables, and subprograms.

No Fortran subject is left unexposed by the book. Variable types, logical operations, string manipulation, and random, direct, and sequential file access techniques are all presented. The style is refreshingly clear and concise—comprehensible by those with little experience, but not simplified to the point where essential information is left out. Those requiring either an introductory Fortran text on a comprehensive reference book will be highly pleased with this book.

INTERFACE AGE 155

inconsistency like this. From a teacher's standpoint, I see Robotwar as a dandy teaching aid to help students learn programming. The language doesn't have a lot of commands, does only simple things, and has a really good incentive attached to it. The student who acquires programming proficiency won't get clobbered as easily. It is also sufficiently similar to Basic and Fortran that it can serve as a springboard to higher languages when the student is ready for them.

Of course, for the person who is already a proficient programmer, the language won't be much to master; it will be the strategy of the programming that takes the real concentration. We see Robotwar becoming the first of a whole sub-genre of computer games for programmers. It's like being able to play chess, and create new pieces with new moves. In a lot of ways, it is the next step up from chess.

Chess players have traditionally carried on games of correspondence chess when unable to meet in person. Lately chess played by telecommunication, rather than postal communication, has begun. Played on a telephone game network like GameMaster, this game would allow each combatant to engage robots against an opponent on a neutral playing field where neither combatant would have access to the other's proprietary code. All that would be needed is a modem-driver addition to the program, so that it could be used on the telecom link.

We received Robotwar expecting just another "zap the klingons" type of combat game, and were surprised to find a wargame that should appeal to the bloodthirstiest Star Wars freak—and at the same time—a programming language, a word processor, a training manual, and an entire realm of virtual machines whose moves and actions YOU define, but don't control. It's worth many times the listed price. □

# How to succeed in business without really trying.

## For peanuts.

STC is proud to formally announce four field-proven business packages for APPLE users. And an irresistible offer.

All of these programs are straightforward, easy to use, virtually foolproof, and very attractively priced. The prices quoted include both the programs and easy-to-follow instruction manual.

### Accounts Payable

Uses ISAM structured routines and all posting is done in seconds as opposed to hours with other programs. Various reports are generated, including cash requirement journal, check register, open invoice report, Y-T-D payment journal, and aging function to tell how many days left for a discount or an invoice. You also get a complete audit trail on all transactions, a current and Y-T-D analysis of all your accounts and vendors, and a check printed on available forms. **Only \$200.**

### Payroll

Maintains an entire payroll for up to 125 employees. It provides numerous payroll utilities for quick and easy payroll and check generation. It has built-in Federal and State tax tables and provides some remarkable reporting capabilities. **Only \$240.**

### Professional Time and Billing

Maintains time and billing data for up to 300 clients. 120 rates (employees) can be on file at any time. Rates may appear as time/expenses/fixed fees. Prints statements on available forms. Generates a variety of transactions and activity reports, and much more. **Only \$325.**

### Apartment Management

Maintain financial and managerial data for up to 6 separate apartment complexes. Each complex can contain a maximum of 120 units and 8 different types of units. Generates an operating statement which contains YTD rental income, security deposits, pet deposits, pool deposits, misc. deposits, damage amounts, allowances, expenses and a complete breakdown of apt. units by type. Again, some great reports. **Only \$325.**

### Early Bird Offer

If you purchase any one of these programs from your STC dealer within the next 30 days, we'll let you have our new and quite fantastic Coloring Board package for only \$30. This program, normally costing \$60, compares with some hardware capabilities costing \$800 and more. It allows you to quickly create, store and display all types of graphics and text labeling. For example, a bar-chart like the one shown above for display at sales meetings. In short, it has unlimited useful applications for business.

Act now. Contact your local STC dealer for details on this extremely unusual offer. And be sure to check out the rest of our great line of software packages as well.

### Dealer inquiries invited.

# Now NRI takes you inside the new TRS-80 Model III microcomputer to train you at home as the new breed of computer specialist!

**NRI teams up with Radio Shack advanced technology to teach you how to use, program and service state-of-the-art microcomputers...**

It's no longer enough to be just a programmer or a technician. With microcomputers moving into the fabric of our lives (over 250,000 of the TRS-80™ alone have been sold), interdisciplinary skills are demanded. And NRI can prepare you with the first course of its kind, covering the complete world of the microcomputer.

## **Learn At Home in Your Spare Time**

With NRI training, the programmer gains practical knowledge of hardware, enabling him to design simpler, more effective programs. And, with advanced programming skills, the technician can test and debug systems quickly and easily.

Only NRI gives you both kinds of training with the convenience of home

study. No classroom pressures, no night school, no gasoline wasted. You learn at your convenience, at your own pace. Yet you're always backed by the NRI staff and your instructor, answering questions, giving you guidance, and available for special help if you need it.

## **You Get Your Own Computer to Learn On and Keep**

NRI training is hands-on training, with practical experiments and demonstrations as the very foundation of your knowledge. You don't just program your computer, you go inside it...watch how circuits interact...interface with other systems...gain a real insight into its nature.

You also work with an advanced liquid crystal display hand-held multimeter and the NRI Discovery Lab, performing over 60 separate experiments. You learn troubleshooting procedures and gain greater understanding of the information. Both microcomputer and equipment come as part of your training for you to use and keep.

## **Send for Free Catalog... No Salesman Will Call**

Get all the details on this exciting course in NRI's free, 100-page catalog. It shows all equipment, lesson outlines, and facts on other electronics courses such as Complete Communications with CB, TV/Audio and Video, Digital Electronics, and more. Send today, no salesman will ever bother you. Keep up with the latest technology as you learn on the latest model of the world's most popular computer. If coupon has been used, write to NRI Schools, 3939 Wisconsin Ave., Washington, D.C. 20016.

**Training includes new TRS-80 Model III microcomputer, 6-function LCD Beckman multimeter, and the NRI Discovery Lab with hundreds of tests and experiments.**

# PRODIGY:<sup>TM</sup> YOUNG AND BRILLIANT

Every so often an individual is born exhibiting extraordinary talent at a very early age. Often, they rise above the multitude, establishing themselves as a master in their field. This individual is called a PRODIGY.

The PRODIGY computer is so advanced, it clearly establishes itself as a master in the field of small business computing.

Modular design and single board construction mean reliability, expandability, and ease of service.

But it is SOFTWARE which truly sets PRODIGY apart. Unlike other computers, software was a major design consideration rather than an afterthought. PRODIGY utilizes a highly advanced operating system and PROTEGE\* to provide some very impressive features:

- |                        |                 |
|------------------------|-----------------|
| ■ DATA BASE MANAGEMENT | ■ INDEXED FILES |
| ■ VIRTUAL CODE         | ■ SPOOLING      |
| ■ DATA COMPRESSION     | ■ MULTI-TASKING |

The result? Incredible performance and inexpensive software development.

---

*"... Though it may look like many other micro-computer systems — PRODIGY ONE literally speeds away from them..."* Max Schindler, Software Editor — **ELECTRONIC DESIGN.**

---

Your local PRODIGY dealer maintains an extensive library of field proven application software. Available applications include General Ledger, Accounts Receivable, Accounts Payable, Payroll, Medical Billing, and a remarkable system for the Personnel Placement Industry. All are easy to use, yet provide a level of sophistication unheard of in its price class. And PRODIGY also does Word Processing!

PRODIGY systems are supported by a nationwide organization of thoroughly trained, experienced professionals. Your PRODIGY dealer is a SINGLE source for hardware, software and a level of service that continually insures effective, trouble free operation.\*

Speed, sophistication, and low cost; an incredible combination for a small business computer. Would you expect less from a PRODIGY?

**PRODIGY**  
**SYSTEMS, INC.**

497 LINCOLN HIGHWAY • ISELIN, N.J. 08830 • (201) 283-2000

CIRCLE INQUIRY NO. 82

\*Prodigy's easy to use compiler-based small business applications development language. Prodigy also supports other popular languages such as FORTRAN, COBOL, BASIC, and PASCAL.

## Articles Wanted...

INTERFACE AGE is seeking articles related to business software applications for the April 1982 issue.

Selection tips and comprehensive reviews are to be featured, as well as articles on the most popular applications (word processing, general ledger, accounts receivable) and unique new applications.

Articles intended for the April issue should be received no later than December 1 for consideration.

Other article topics being solicited include: business hardware, computer graphics, computer languages, computerized communications, medical and educational applications, personal and home applications, word processors, peripherals and interfacing products, tutorials and utility programs. Special emphasis is placed on business systems and applications.

The payment rate ranges from \$20 to \$50 per published page. Submittals should include an abstract, outline and stamped return envelope.

Manuscripts should be typed, double spaced with one-inch margins. Minimum length is four pages, unless programs are included. Photos should be numbered and have a brief description attached. Tables, listings, etc. should be on separate pages and each should have a caption. Computer listings should be printed using a new ribbon to assure good reproduction. Authors are requested to submit a statement of their background and expertise.

The publisher assumes no responsibility for artwork, photos or manuscripts. No acknowledgement is made unless accompanied with a stamped return envelope.

Address all inquiries to Editorial Department, INTERFACE AGE Magazine, 16704 Marquardt Ave., Cerritos, CA 90701. Please do not phone for information about submissions.

## MICRODEX

MICRO INDEX CLASSIFIED

**STRUCTURAL ENGINEERING.** Patterson Engineering has programs written for the Apple computer. Simple beam, Continuous beam, Grid, Frames, and Trusses represent some of our programs. Interested persons call 714-891-0935.

**INTERACT Owners.** You are not abandoned. Write or call for catalogue on tapes, keyboards, RS232 interface, documentation, sales and service. Micro Video, POB 7357, Ann Arbor, MI 48107. (313) 996-0626.

**MICRO MOONLIGHTER** newsletter is the only publication devoted exclusively to helping you create, build, and maintain a home-based business using your microsystem. Start your own computer cottage industry today! One year (12 issues) only \$25 in U.S., \$29 Canada, \$35 Worldwide. Available from the publisher: J. Norman Goode, 2115-F Bernard Avenue, Nashville, TN 37212. Visa and Mastercard accepted. Send account number and expiration date with order.

**QUALITY SOFTWARE.** Database manager/report generator, advanced mailing list, inventory, word processor, GL, A/R, A/P and payroll systems. Available for TRS-80 Mod-I, II, III, CP/M and Heath. For catalog, send long SASE (35¢) to Micro Architect Inc., 96 Dothan St., Arlington, MA 02174.

**MARK WARE** offers easy to use, menu driven, fully documented, and proven programs in BASIC. Request free information from Dept. M4, P.O. Box 70097, Sunnyvale, CA 94086.

**BASIC CODING FORM.** 50 sheets per pad. \$4.00 each pad or 10 pads for \$36.00. Postpaid. Dealer inquiries invited. Basic Data Services, 59 Mar-El Ct., Ellisville, Mo. 63011.

**MICRODEX** is a classified advertising section available to readers wishing to buy, sell or trade hardware and software. Price is \$1 per word, with a 25 word minimum. The first two words bold. Additional bold type \$5 per word.

Send copy with check or money order to INTERFACE AGE, Dept. M-1, 16704 Marquardt Ave., Cerritos, CA 90701.

Your mind has an insatiable appetite for the new. You'll find it at 155,000 stores where magazines and paperback books are sold.

We think reading is the kind of nourishment America needs. More and more.

**Bite into some  
good reading today.**

### CAN YOU KEEP A SECRET?

**PrivateLine Can!**

**PrivateLine** turns the inexpensive Radio Shack Color Computer with modem into a secure communications terminal. Talk to any similarly equipped Color Computer in absolute security using your own 8 character key. Change keys as often as you like.

**PrivateLine** uses an advanced encryption algorithm with billions of different combinations to ensure secure communications. The information typed in at one computer appears on the screen of the other computer — in between it is scrambled beyond recognition.

**PrivateLine** comes in a convenient plug in ROM Cartridge and works with any size Color Computer and full duplex modem, such as the Radio Shack direct connect modem.

**PrivateLine** is priced at \$99.00 or 2/\$189.00  
Send check or money order to:

**Eigen  
Systems**

P.O. Box 10234  
Austin, Texas 78766  
(512) 837-4665

## NEW FOR APPLE\* SERVICE STATION SOFTWARE

Introducing PAKRE, Inc.'s System DB/SA software for service stations: a fully documented, easy-to-run computer program that does the Daily Book like traditional books offered by service station bookkeeping companies—but does it so much faster and more accurately.

Sample work for easy familiarization. No previous computer experience needed.

Requires Apple II Plus 48K computer, 2 drives and 80-column printer.

Suggested retail price: \$1600.00

Dealers welcome: Demo diskettes, printouts and manual: \$150.00

PAKRE, Inc., a company of service station people doing business to serve the station industry through computers.

5230 N. Clark Av., Suite 5, Lakewood, CA 90712 Tel. (213) 866-2581.

\*Trademark of Apple Computer, Inc.

# The World's First MacroComputer<sup>®</sup>

The **Parallel Processing<sup>®</sup> System/48<sup>®</sup>** is the world's first **MacroComputer<sup>®</sup>**, an elegantly powerful and modular multi-user computer for business and industry. It was designed from the start to out-perform other computer systems at three or more times its price. The operating system software is so friendly, versatile and fast that it's called **MAGIC<sup>®</sup>**.

In addition to outstanding new capabilities, **MAGIC'S** interface translator allows instant access to a large number of standard languages and applications for GL, AR, AP, PR, Inventory, Financial Planning, Fixed Assets, Property Management, Prospect Management, Order Entry, Word Processing and a host of others. **DataMagic II<sup>®</sup>** is provided with the **System/48**, for comprehensive database management . . . and it makes new application programming a simple joy.

Whether it's 2 or 3 users, or 128, **MAGIC** exhibits exceptional performance with transactional disk back-up to cartridge or 9-track tape; full access security; logical partitioning of tasks and users; fast Multi-Key ISAM access to multiple disks in each node (10-250 Mbytes); 1-16 Workstations and Task Processors in each node; up to 16 nodes; local and central printers for both word and data processing; remote Workstations and nodes; communications; real-time calendar and clock; and exceptional reliability because of its modularity and redundancy of software and hardware.

And that's the whole point! You can get exactly the performance and configuration needed now and it can expand easily to meet future needs, taking advantage of the technology revolution. Large or small, real-time, batch or mixed, there's a **System/48** that's just right for the job.

If you haven't seen our **Parallel Processing System/48 MacroComputer** in **ACTION**, then seeing is believing! See your local dealer today for the full story. Or call Jim Knepton now at (713) 738-2300 and he'll explain how you can have your own private showing . . . and how easy and profitable it can be for you and your business.

TEI has 14 years of experience in manufacturing it RIGHT!

## **“Together we’re working to better serve mankind.”**

“Speaking on behalf of Vector computers, I’m pleased to announce that TRW Customer Service Division will provide a nationwide, nine-month on-site service warranty that you, the end-user, will receive absolutely free.\*

“I’d also like to add that this is a unique program. It’s actually the first time a microcomputer has had this kind of comprehensive nationwide on-site service — especially from a company of experts like TRW.

“Now you have even more security when you buy a Vector. In addition to increasing your personal productivity, helping you make faster decisions, and improving your business, we offer a network that will service us right in your office if we ever need it. At no expense to you.

“Right now, you can get quick, dependable service in Los Angeles, New York City, Denver, Dallas, Chicago, San Francisco, Northern New Jersey, Philadelphia, Atlanta, and Boston. With more cities on the way.

For more information and your nearest Dealer, call us at 800-423-5857. In California, call 800-382-3367. Or write to us at 31364 Via Colinas, Westlake Village, CA 91362.

“TRW and Vector. Now that we’re helping each other, there’s no telling how much we can accomplish for you.”
